Optimization of the FCC-ee IR beam pipe elements for minimum of the wake field energy loss responsible for the heat load.

Wednesday 12 June 2024 14:05 (15 minutes)

We present the results of the wake field analyses for different geometries of the IR beam pipe elements like bellows, BPMs, SR mask including beam pipe shape. We found a possibility how to decrease and capture wake fields generated by colliding beams in the interaction region. This optimization study will be useful for the FCC-ee IR beam pipe design.
