First ADS Analysis of $B^+ \rightarrow D^0 K$ Decays in Hadron Collisions

Thursday, 11 August 2011 10:30 (24 minutes)

We report the first measurement of branching fractions and CP-violating asymmetries of doubly-Cabibbo suppressed $B^+ \rightarrow D^0 K$ decays in hadron collisions, using the approach proposed by Atwood, Dunietz, and Soni (ADS) to determine the CKM angle γ in 7.0 fb^{-1} of data. The ADS parameters are determined with accuracy comparable with B factory measurements.
