## **Bc and Suppressed Bs Decays at CDF**

*Thursday, 11 August 2011 10:52 (20 minutes)*

We present new results of CDF measurements of Bc and suppressed Bs decays.

The first measurement of the Bc lifetime in an exclusive fully-reconstructed final state is reported.

An improved measurement of the Bs $\rightarrow$ DsDs decay is reported along with a measurement of the branching ratio and lifetime for Bs $\rightarrow$ J/psif0 decays and the first measurement of a CP violating asymmetry in Bs $\rightarrow$ phiphi decays.
