Tevatron Accelerator Methods and Techniques Applicable for Future Accelerators

Tuesday, 9 August 2011 14:00 (30 minutes)

The success of Tevatron Run II is based on advances in accelerator physics, as well as on the excellence and advances in engineering, instrumentation and machine operation. We review the main advances in accelerator physics which contributed to the luminosity growth and/or improvement of the Tevatron complex operations, and discuss their applicability to future colliders.
