## Measurement of the Drell-Yan differential cross section at 7 TeV

*Tuesday, 9 August 2011 15:00 (20 minutes)*

We present a measurement of the Drell-Yan differential cross section in pp collisions as a function of the dilepton invariant mass ( $d\sigma/dm$ ). The data sample was collected by the CMS detector at the LHC operating at a center-of-mass energy of 7 TeV during 2010 and 2011. The results are compared to predictions of the Standard Model.
