## Measurement of Quarkonia production at 7 TeV with the CMS experiment

Tuesday, 9 August 2011 14:22 (20 minutes)

The measurement of J/psi and Y production cross section in proton-proton collisions at  $\sqrt{s} = 7$  TeV is presented using a data sample collected with the CMS detector at the LHC. We also report the measurement of the ratio of X(3872) and psi(2S) signal yields.
