Top Quark Theoretical Cross Sections and pT and Rapidity Distributions

Tuesday 9 August 2011 16:40 (20 minutes)

I present theoretical results for the top quark pair total cross section, and for the top quark transverse momentum and rapidity distributions at Tevatron and LHC energies. I also present results for single top quark production in the t- and s-channels and also via associated production with a W boson. The calculations include approximate NNLO corrections that are derived from NNLL soft-gluon resummation.
