## Searches for Supersymmetry in Hadronic Final States with the CMS Detector at the LHC

*Tuesday, August 9, 2011 4:00 PM (20 minutes)*

We present the results of searches for Supersymmetry in all-hadronic final states with jets and missing transverse energy, including the cases of jets identified as b-jets, the decay products of top quarks and hadronically decaying tau leptons. The searches are performed using data collected by the CMS experiment at the LHC in pp-collisions at a center-of-mass energy of 7 TeV. Various data-driven techniques used to measure the Standard Model backgrounds are discussed. The results are interpreted in a range of Supersymmetric scenarios.

### Summary

Submission is on behalf of CMS, CMS speaker will be named once the abstract has been accepted.
