## Measurements of CP Violation in B Decay at Belle

*Thursday, 11 August 2011 11:18 (24 minutes)*

We present the final measurement of time-dependent CP violation in the neutral B decays into charmonium and a  $K^0$  meson with a large data sample containing 772 million  $B\bar{B}$  pairs collected at the Upsilon(4S) resonance with the Belle detector at the KEKB asymmetric-energy  $e^+e^-$  collider. We also report the first results on CP violation in the radiative penguin decay  $B^0 \rightarrow K_S \phi \gamma$  and  $B^0 \rightarrow \omega K_S \gamma$ , improved measurements of CP violation in  $B^0 \rightarrow \pi^+ \pi^-$  and  $B^0 \rightarrow a_1^+ \pi^-$  decays as well as new measurements of B decays to  $\rho^0 \rho^0$  and pairs of charm mesons.
