“The bootstrap manifesto”

1. INTRODUCTION

IN this paper I present an indecently optimistic view of strong interaction theory. My belief is that a major breakthrough has occurred and that within a relatively short period we are going to achieve a depth of understanding of strong interactions that a few years ago I, at least, did not expect to see within my lifetime. I know that few of you will be convinced by the arguments given here, but I would be masking my feelings if I were to employ a conventionally cautious attitude in this talk. I am bursting with excitement, as are a number of other theorists in this game.

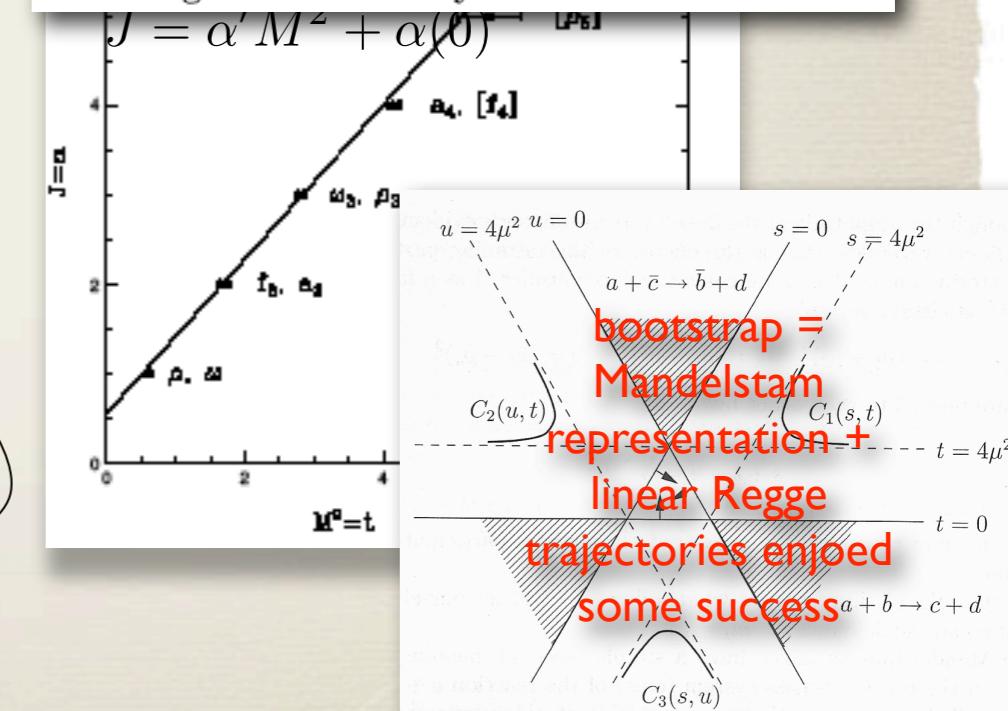

I present my view of the current situation entirely in terms of the analytically continued S matrix, because there is no other framework that I understand for strong interactions. My oldest and dearest friends

strong interactions
as a
string theory

Polyakov, Wilson: loop theory

AdS/CFT

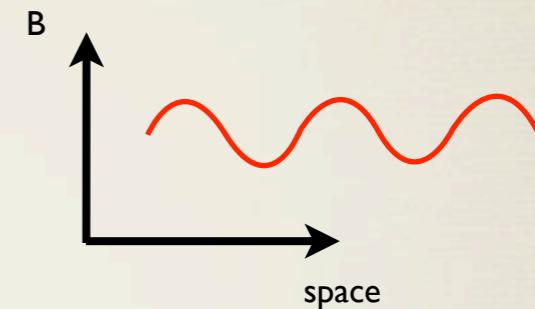

$$A(s, t) = \frac{\Gamma(-\alpha(s))\Gamma(-\alpha(t))}{\Gamma(-\alpha(t) - \alpha(s))}$$

- QED (at the atomic scale)

weakly interacting photons +
non-relativistic charges

Vacuum fields : Coulomb potential
+ (de-coupled) harmonic oscillators

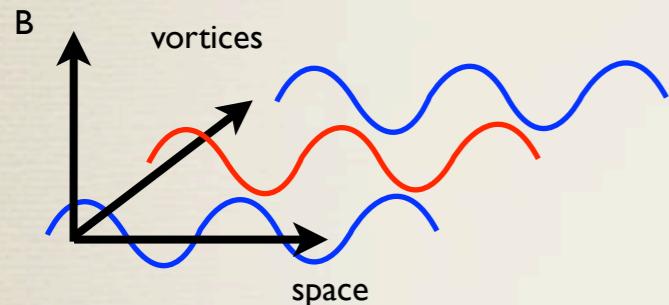

Conventional bound states (atoms):
radiation coupled
 $|H\rangle = |e^+ p\rangle |\gamma\rangle$

● QCD (at the nuclear scale)

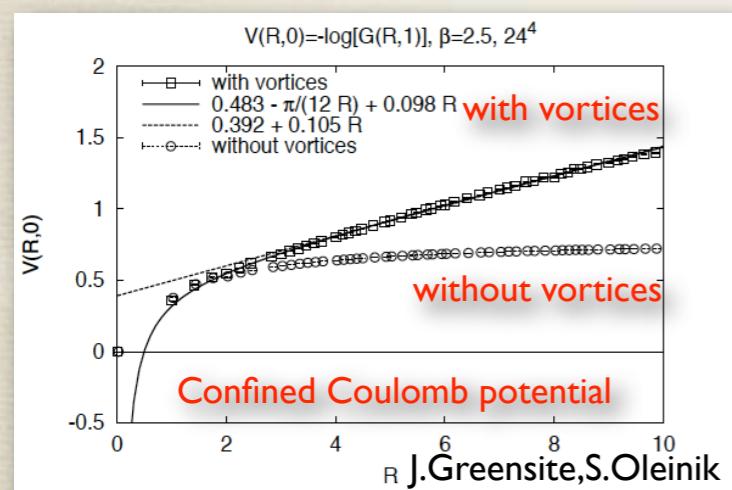

self-interacting gluons with strong coupling + relativistic (light) or non-relativistic (c,b) quarks

Vacuum fields : Confined Coulomb potential + (coupled) magnetic charges (monopoles,vortices)

New states of matter (hadrons): radiation strongly coupled

$$|H\rangle = \sum_i |q_i g_i\rangle$$

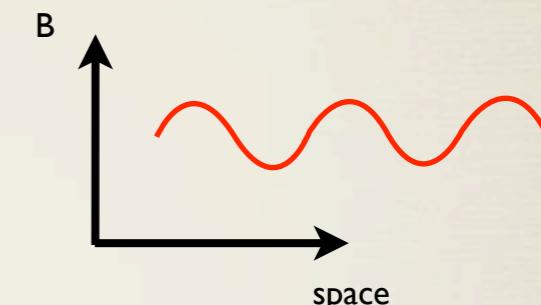

Heavy quarkonia:
Confined Coulomb + excited glue
(quark model template)

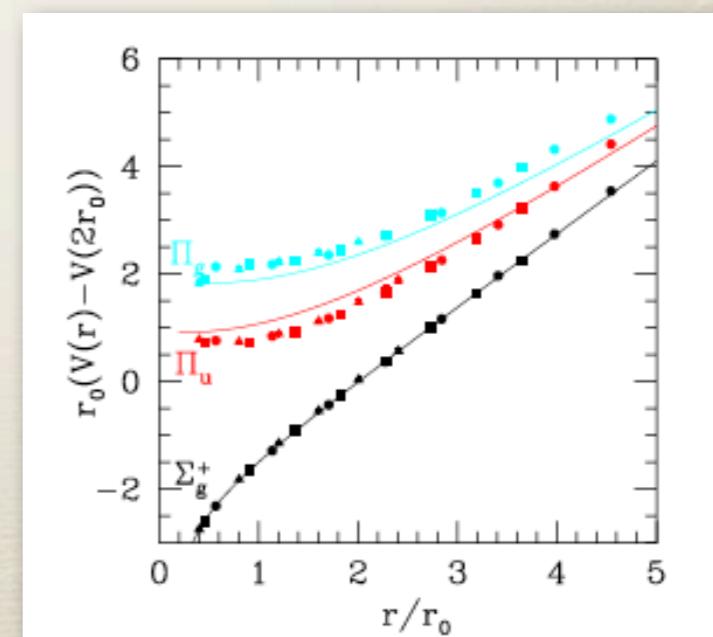

● QED (at the atomic scale)

weakly interacting photons + non-relativistic charges

Vacuum fields : Coulomb potential + (de-coupled) harmonic oscillators

Conventional bound states (atoms): radiation coupled
 $|H\rangle = |e^+ p\rangle |\gamma\rangle$

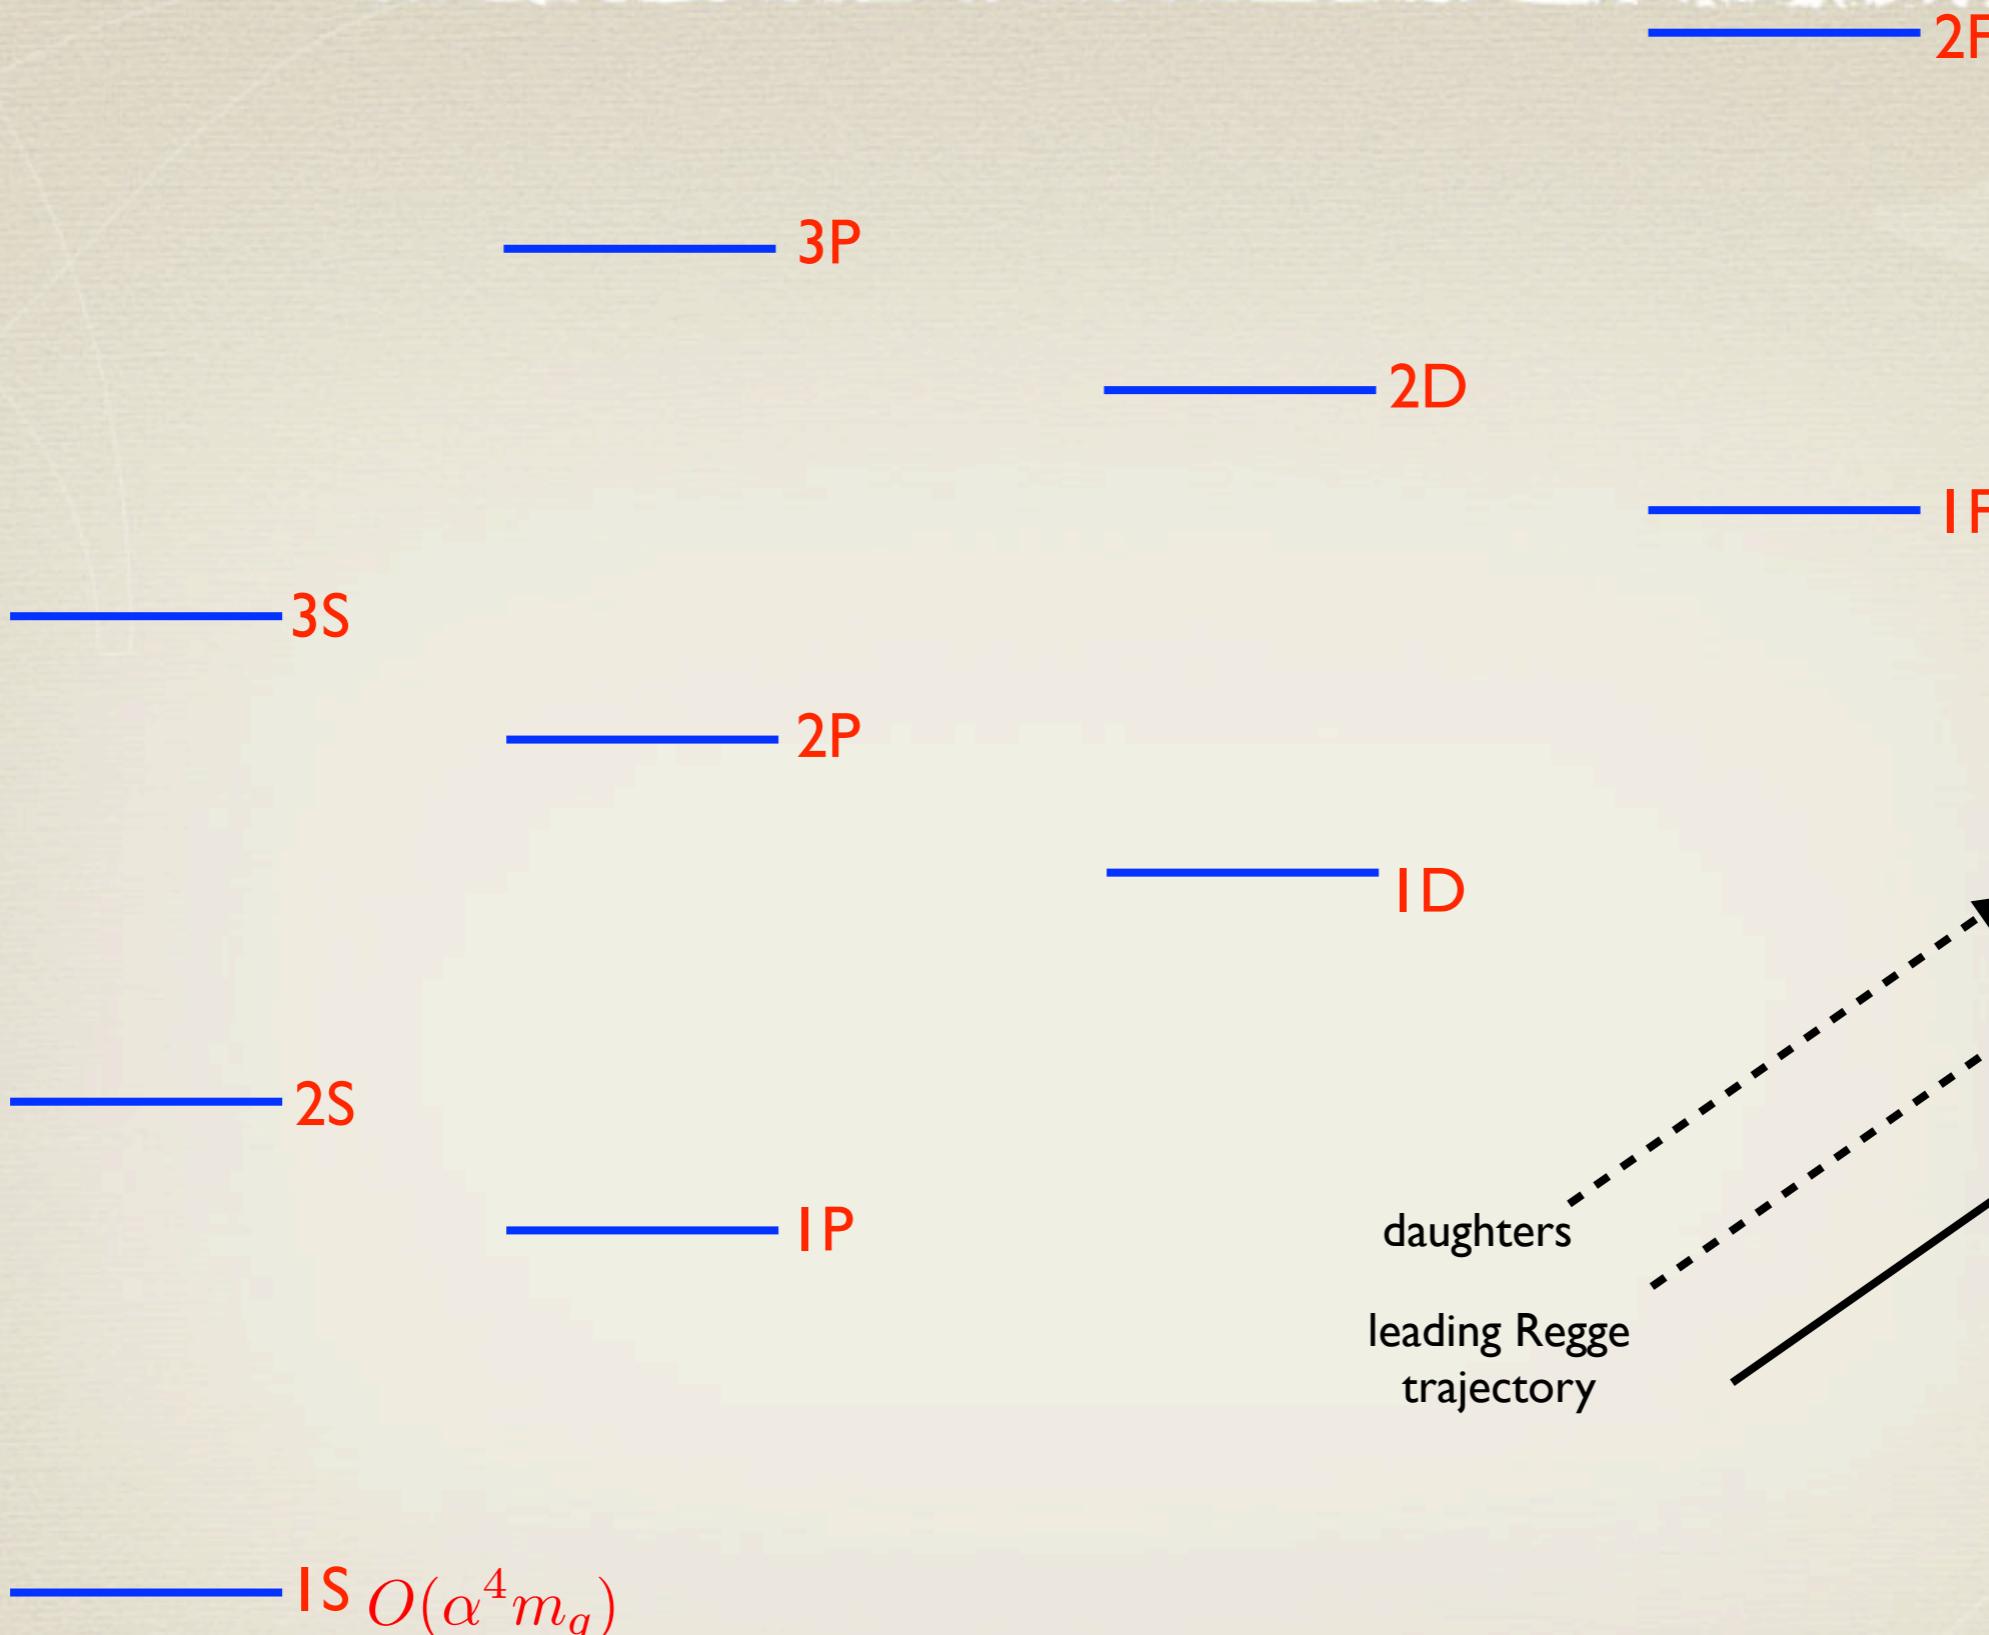

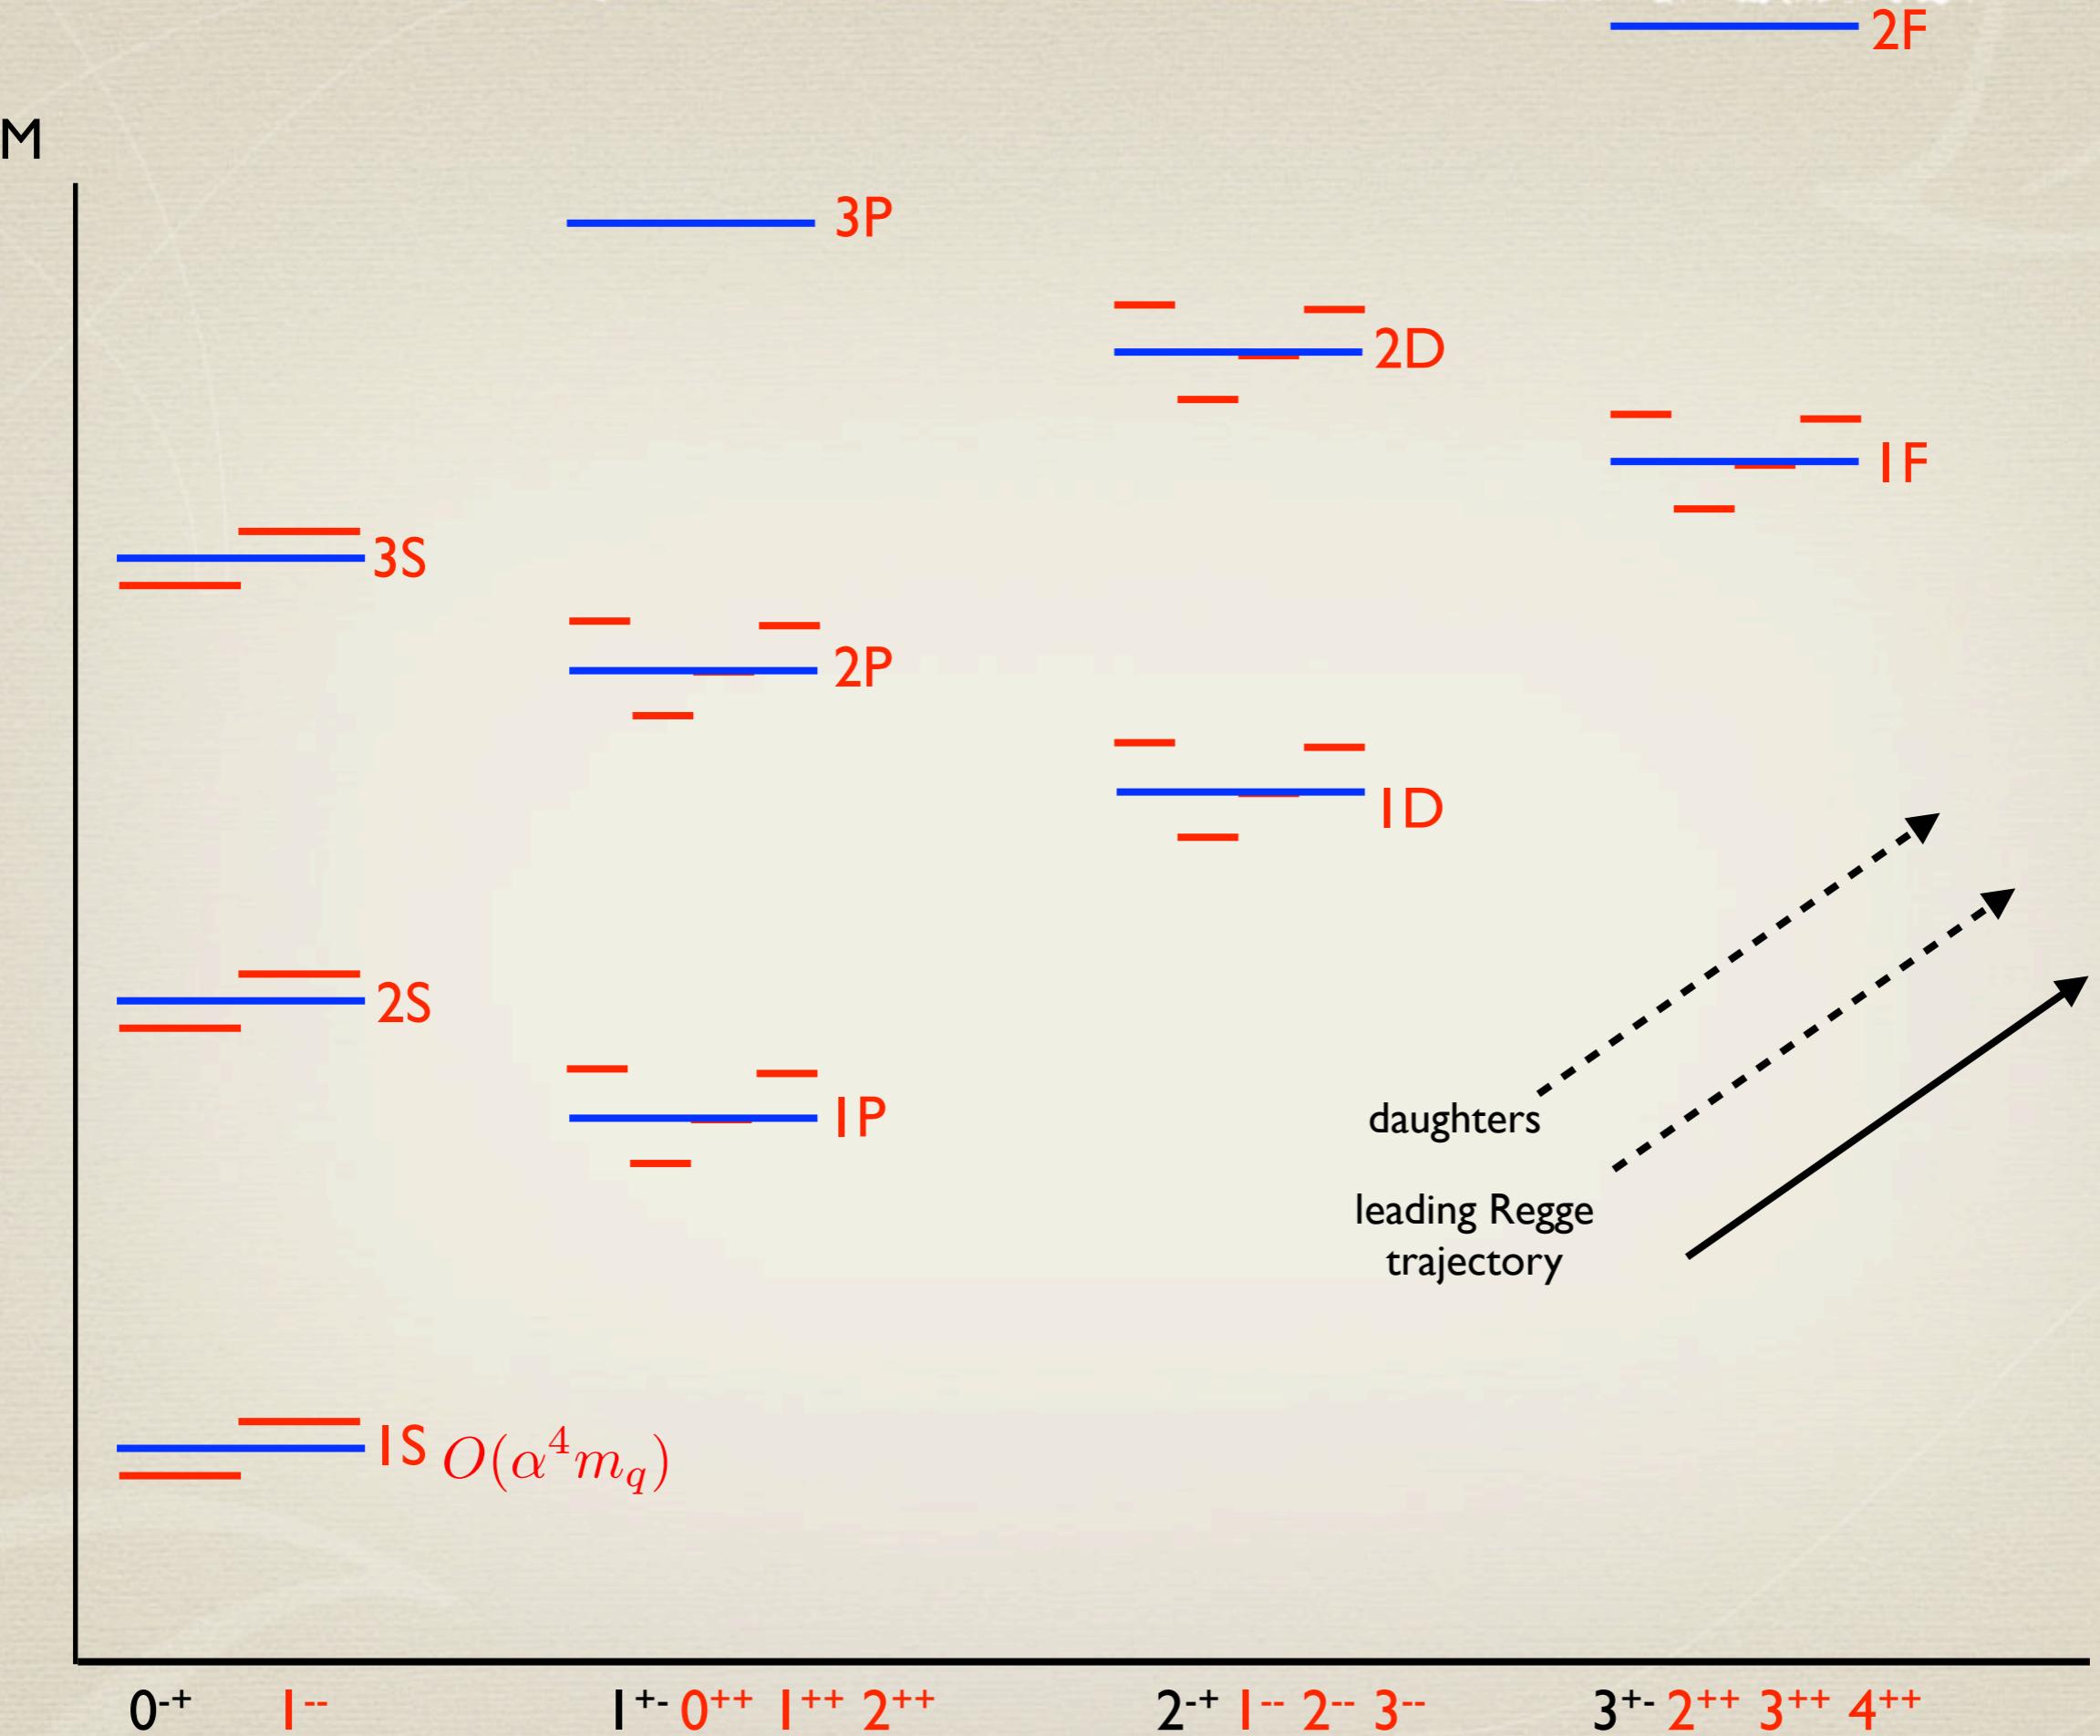

Features of the Hadron Spectrum: Charmonium

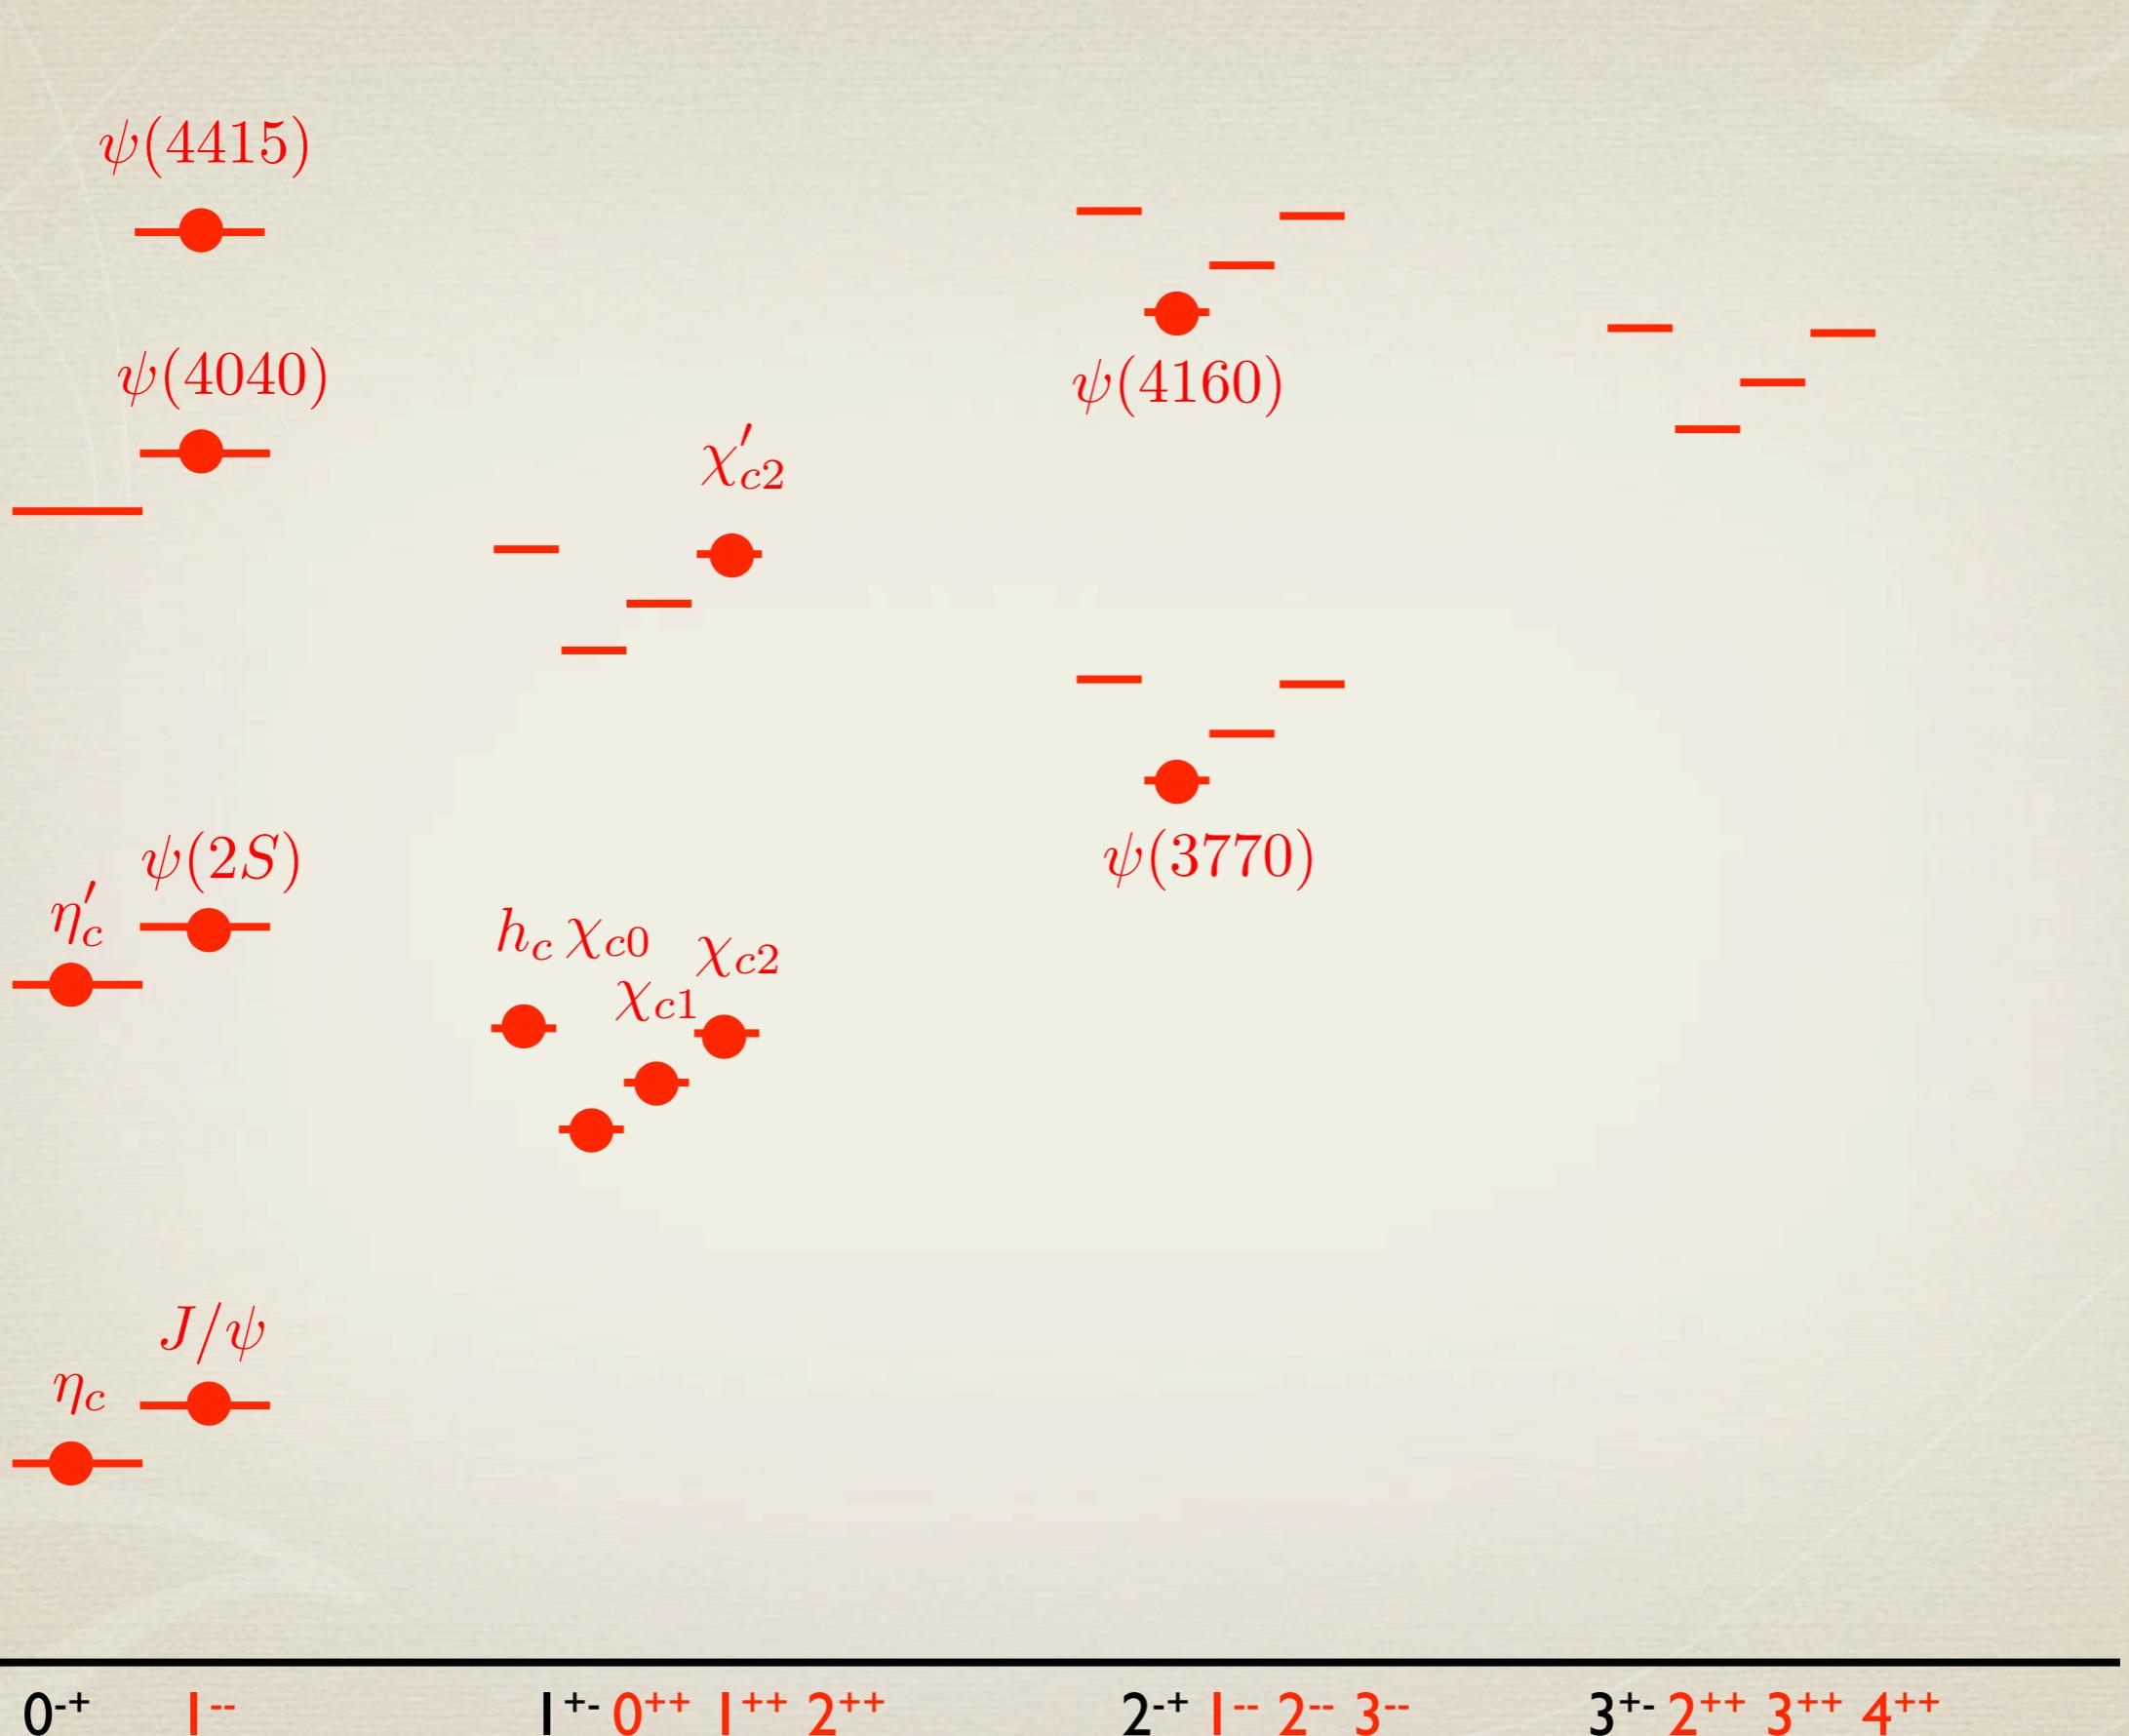

- quark model template ground state flux tube dominates
- hybrid candidate X(4260) sign of excited glue
- molecular ($D\bar{D}^*$) candidate X(3872) residual hadronic forces
- possible extra states $M=3900 - 4200$?
- charged charmonia $M=4000 - 4500$
(aka tetraquarks) ???

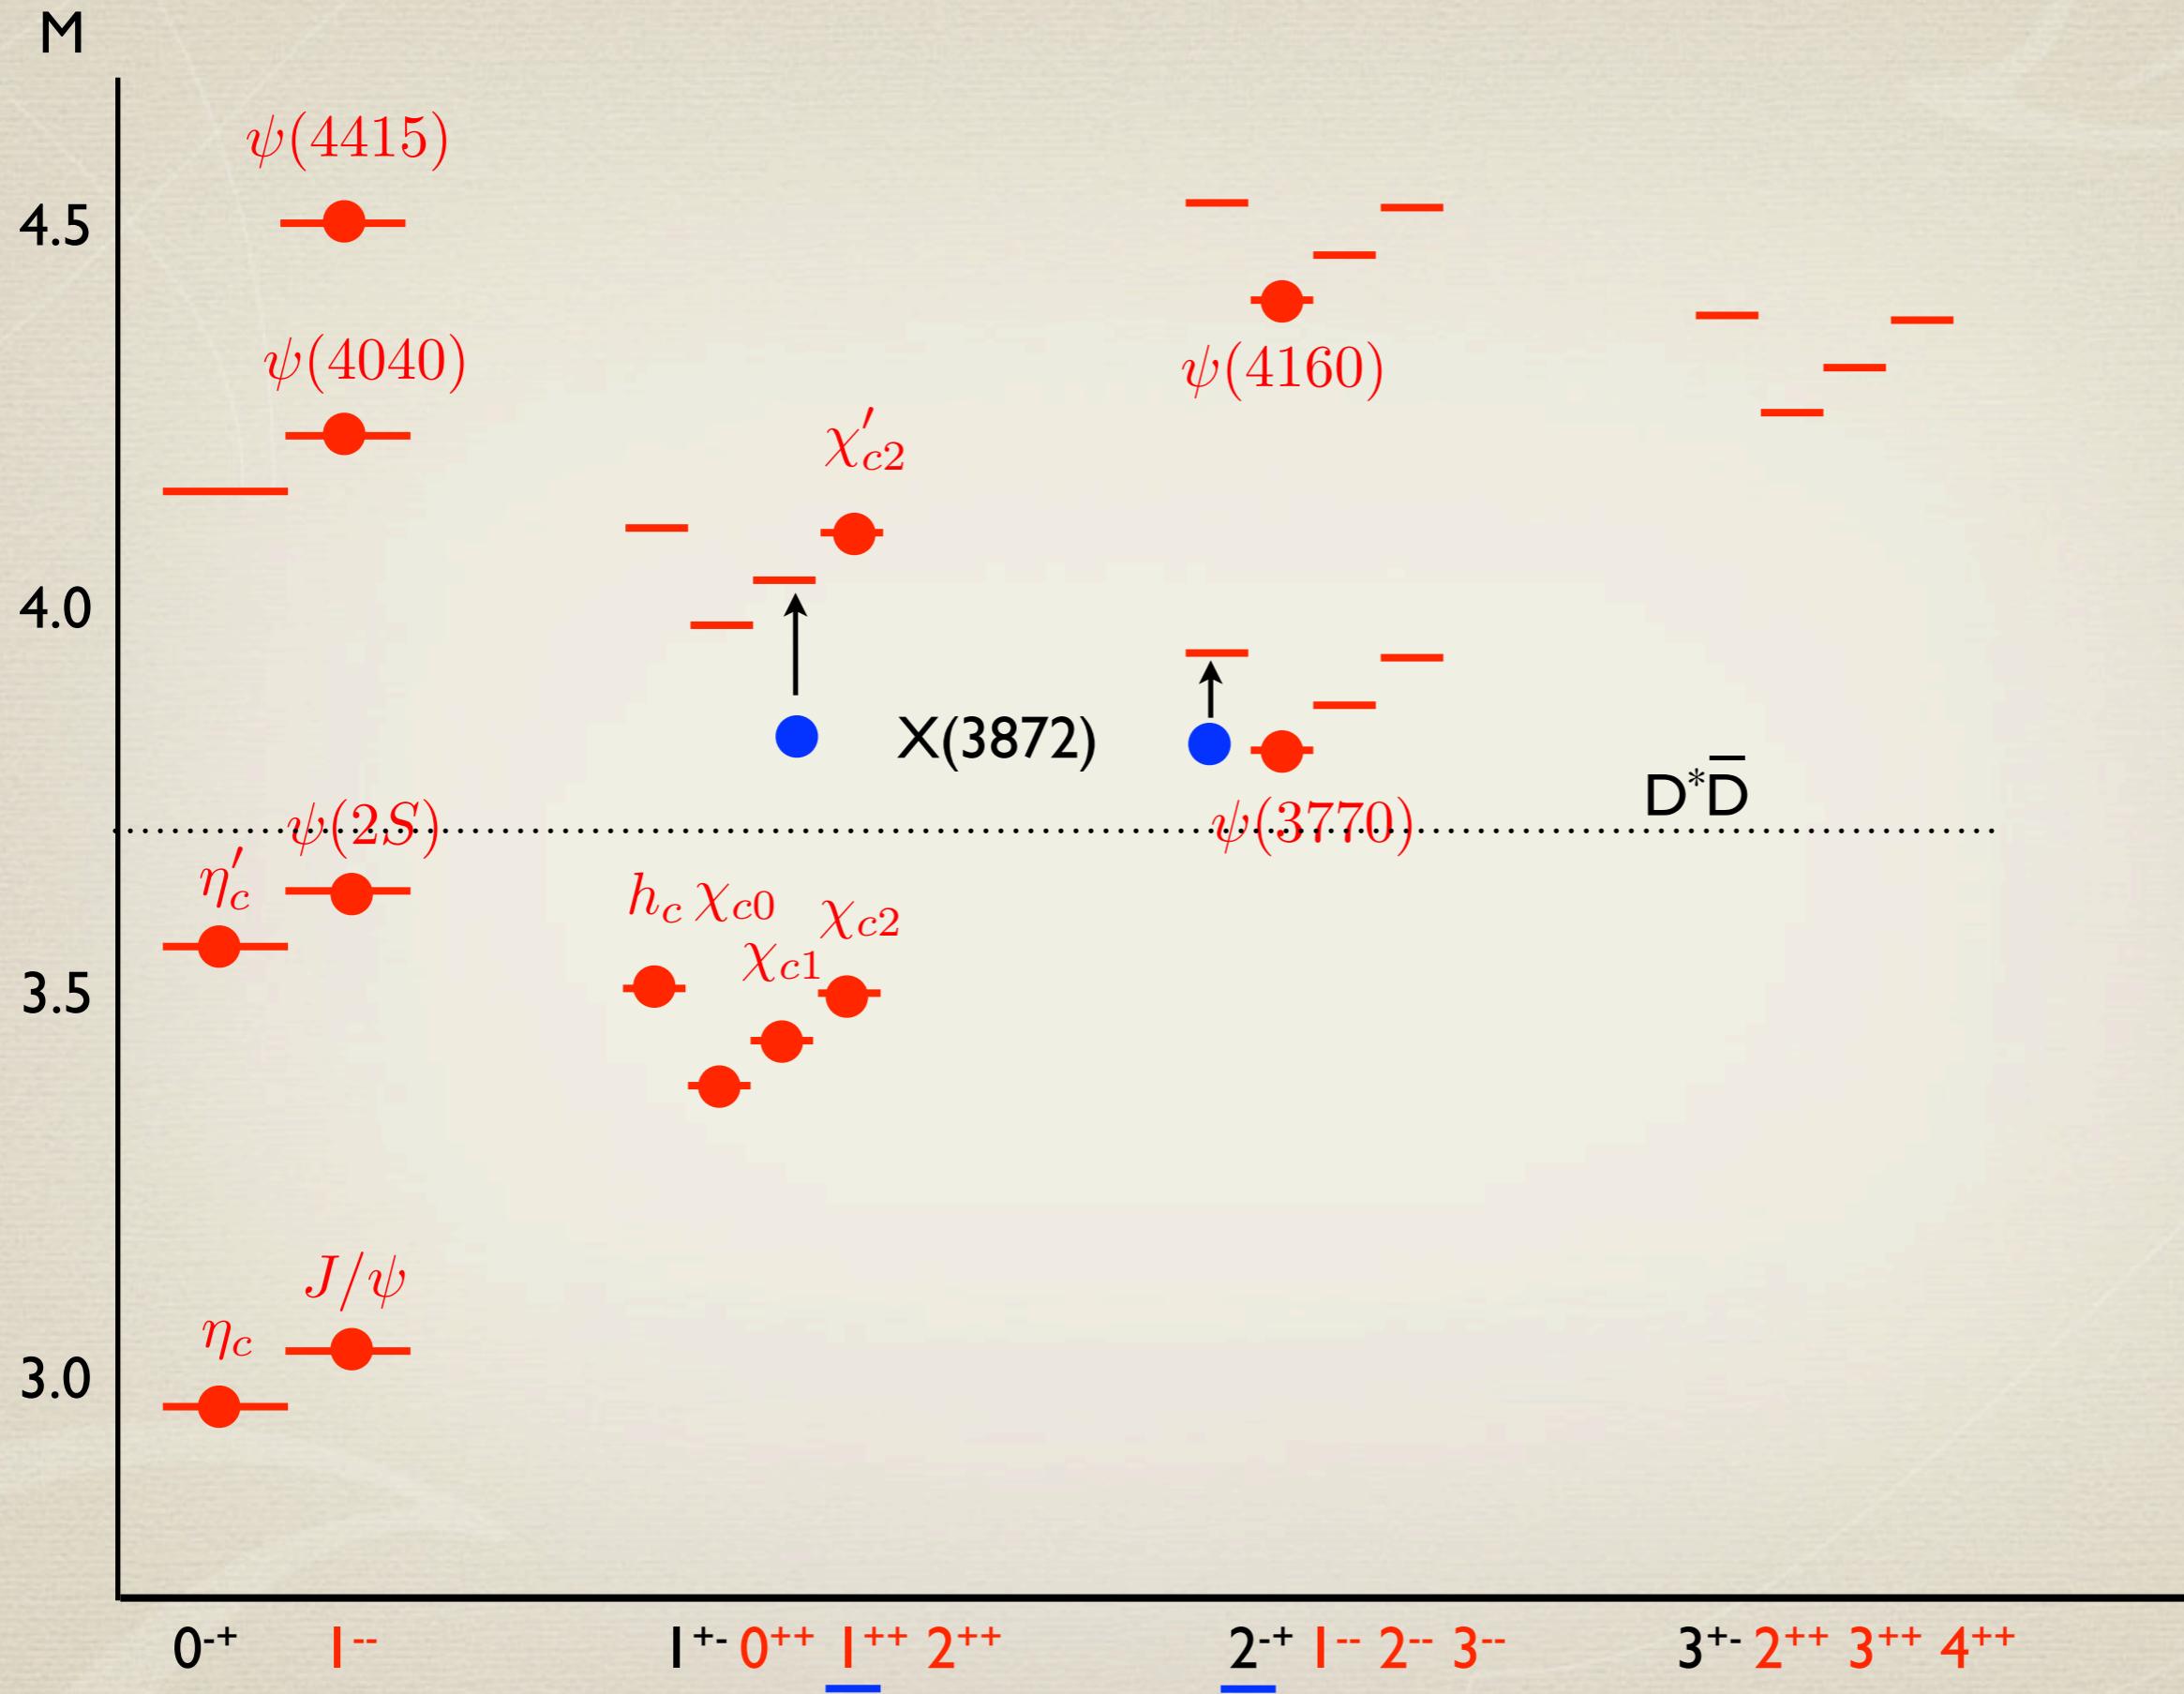

Christopher Hearty (BaBar)

David Asner (Belle) (Hadron Spectroscopy, Friday)

● $\chi(3872)$ discovered by Belle in $J/\psi \pi^+ \pi^-$ (2003) confirmed by CDF other modes from Bell,BaBar

mass between D^*D and $DD\pi$ thresholds $O(\text{MeV})$ width (1 MeV)

* if $J^{PC}=1^{++}$ then S-wave D^*D molecule (several fm)?

* 2^{-+} (BaBar, 2010) QM ?

P.del Amo Sanchez et al., PRD82, 132002 (2010)

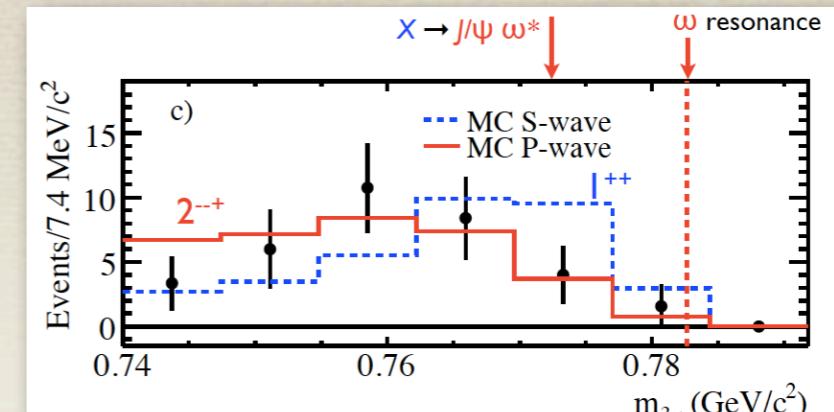

● $X(3872)$ discovered by Belle in $J/\psi \pi^+ \pi^-$ (2003) confirmed by CDF other modes from Bell,BaBar

mass between D^*D and $DD\pi$ thresholds $\mathcal{O}(\text{MeV})$ width (1 MeV)

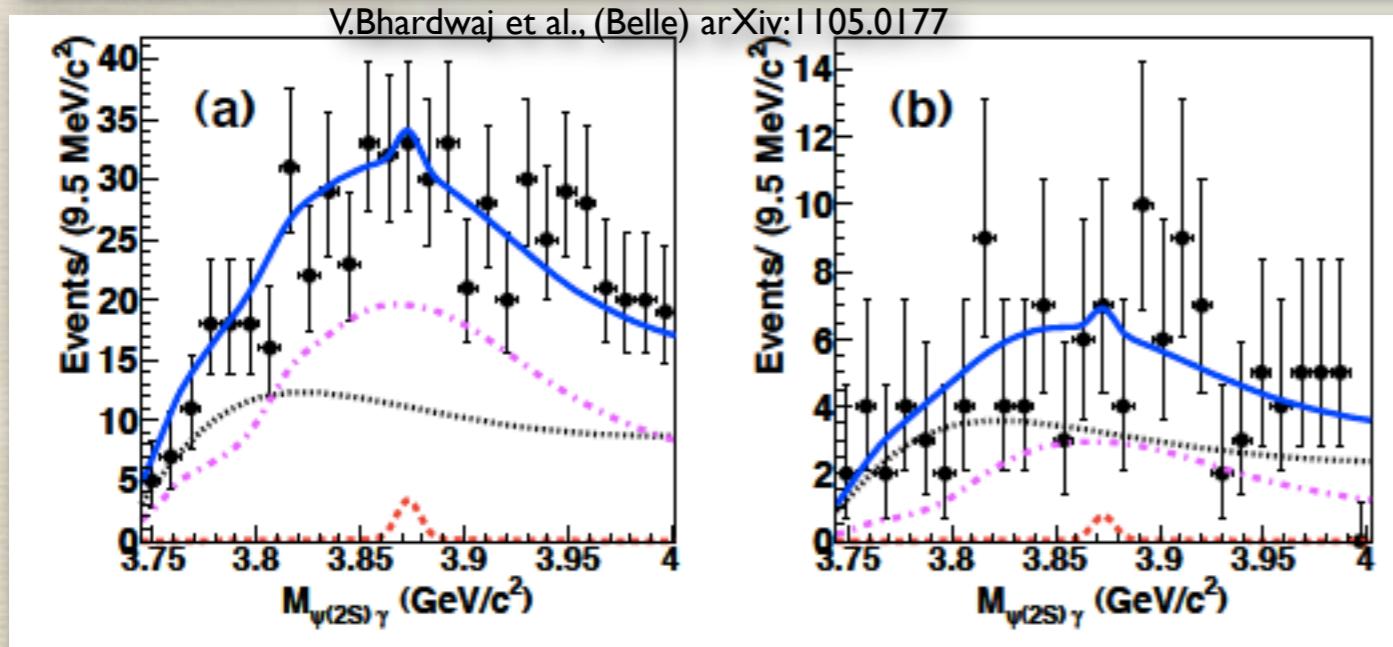

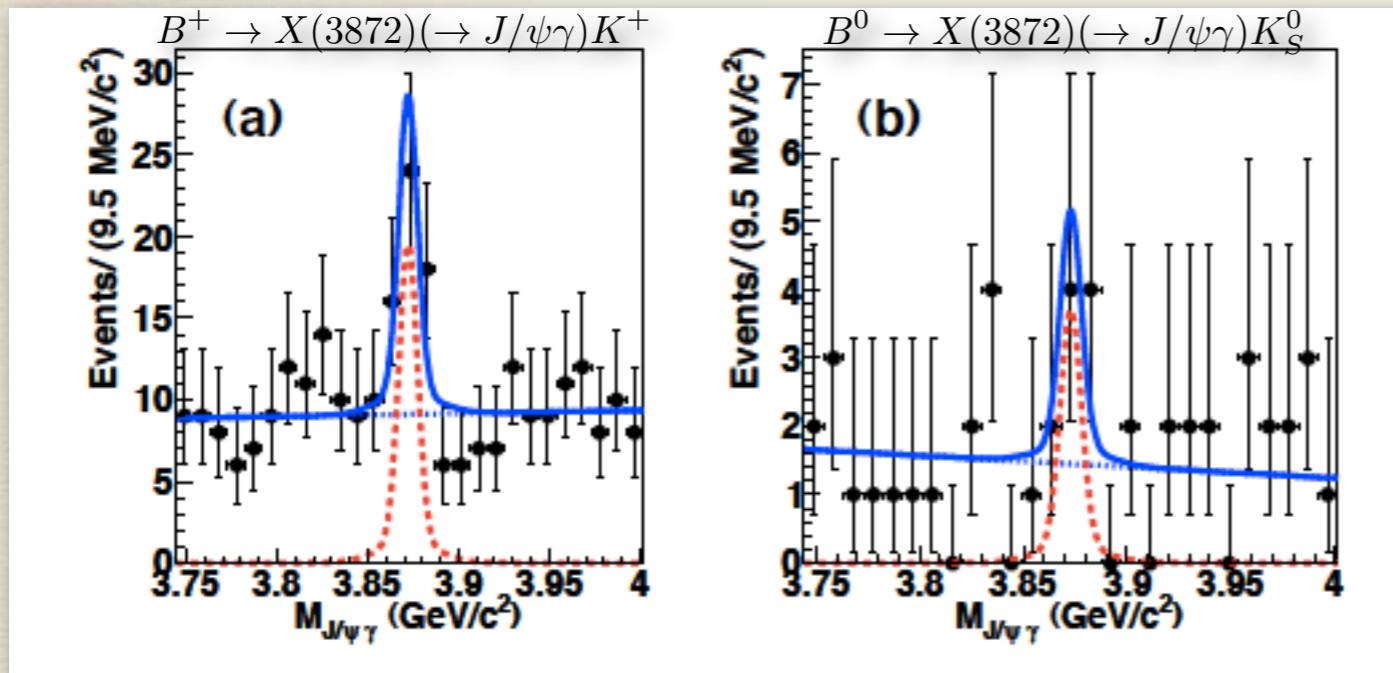

* if $J^{PC}=1^{++}$ then S-wave D^*D molecule (several fm)?

* 2^{-+} (BaBar, 2010) QM ?

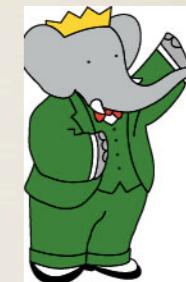

* need radiative decays of X , $2P$ and $1D$

P.del Amo Sanchez et al., PRD82, 132002 (2010)

$$\mathcal{B}(B^+ \rightarrow K^+ X(3872) \mathcal{B}(X(3872) \rightarrow R\gamma), 10^{-6}$$

$$J/\psi \quad 1.78^{+0.48}_{-0.44} \pm 0.12 \quad 2.8 \pm 0.8 \pm 0.1$$

$$\psi' \quad < 3.45 \quad 9.5 \pm 2.7 \pm 0.6$$

small cc component ?
The jury is still out

*

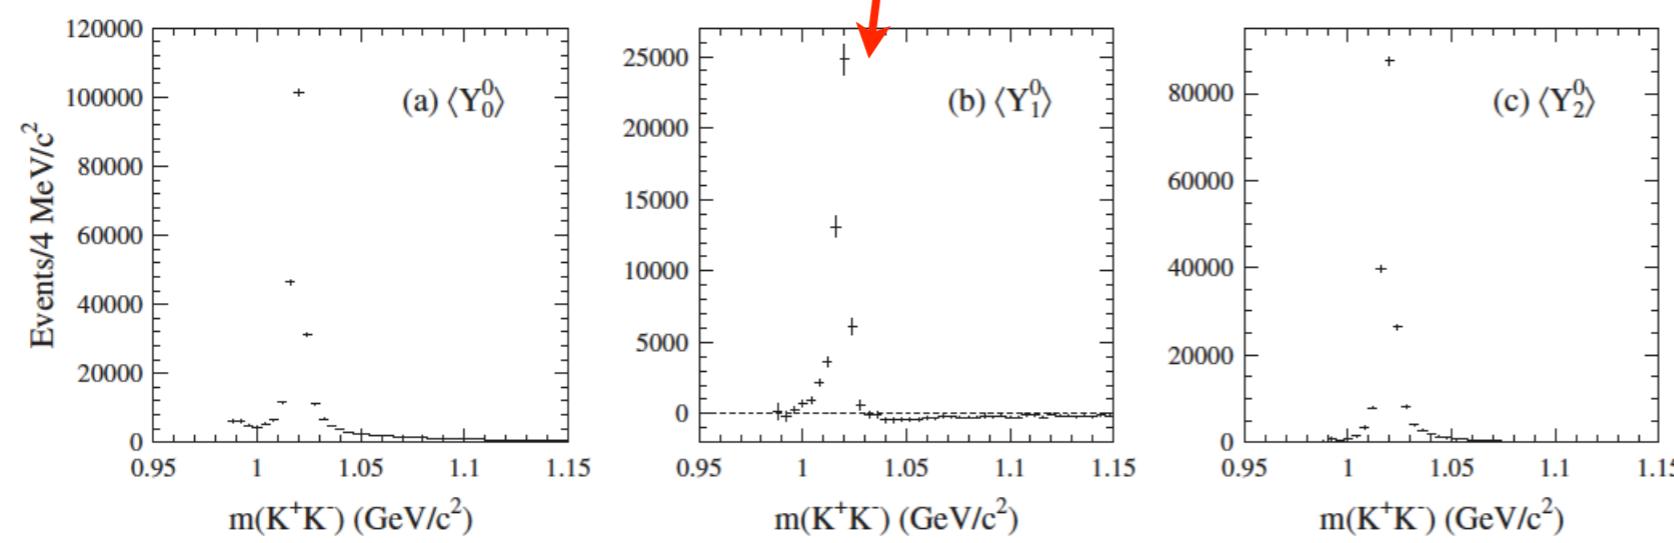

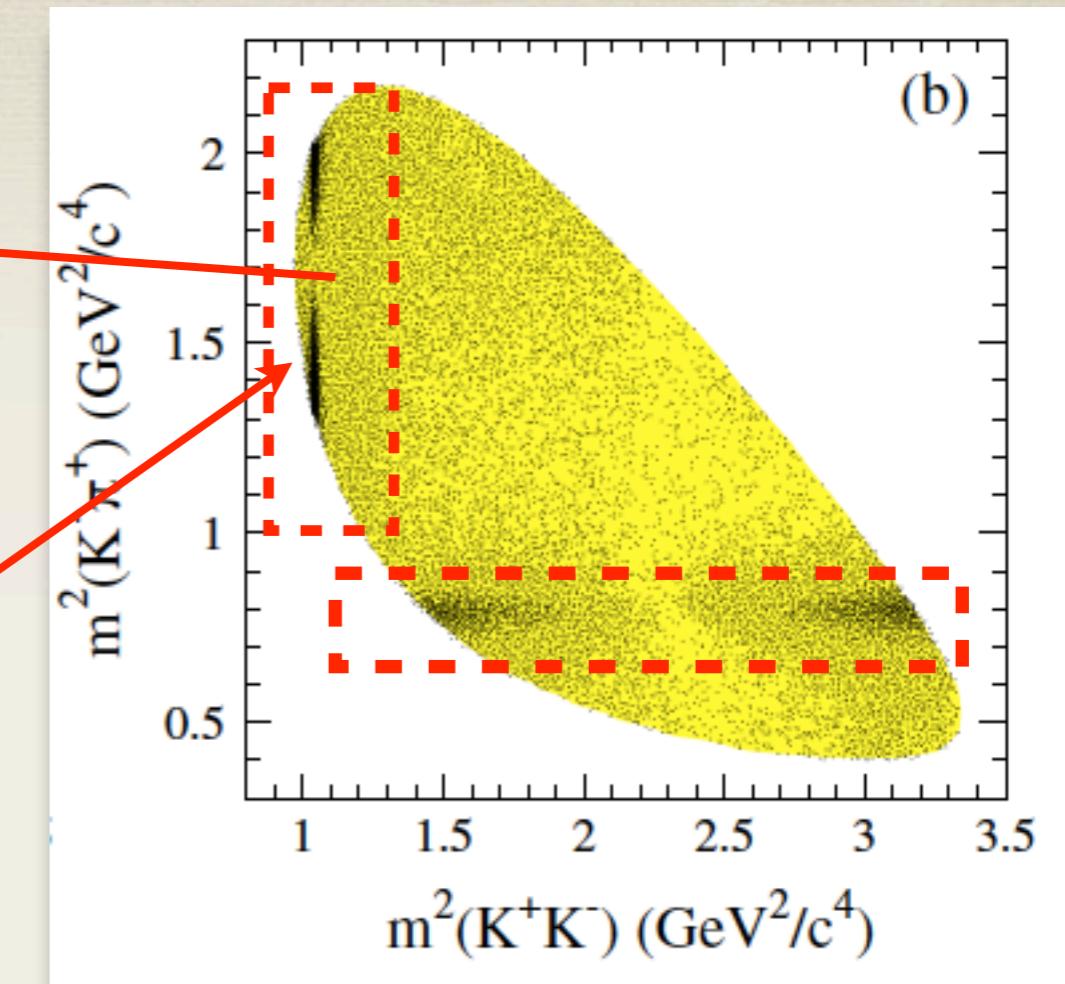

if molecule then maybe closely related to the $f_0(980)$ in KK

precision strong phases
from weak D-decays

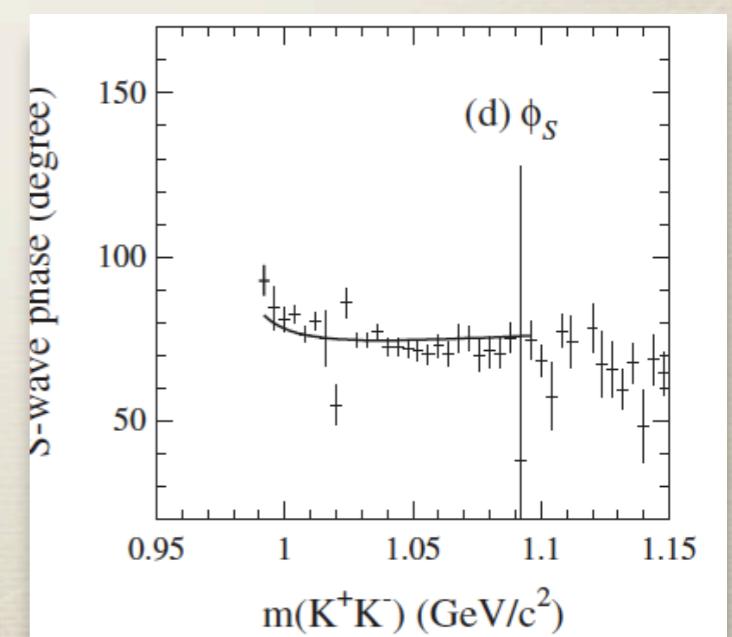

$D_s^+ \rightarrow K^+ K^- \pi^+$ (Babar 2011)

$$\begin{aligned}\sqrt{4\pi} \langle Y_0^0 \rangle &= |S|^2 + |P|^2 \\ \sqrt{4\pi} \langle Y_2^0 \rangle &= \frac{2}{\sqrt{5}} |P|^2, \\ \sqrt{4\pi} \langle Y_1^0 \rangle &= 2|S||P|\cos\phi_{SP}\end{aligned}$$

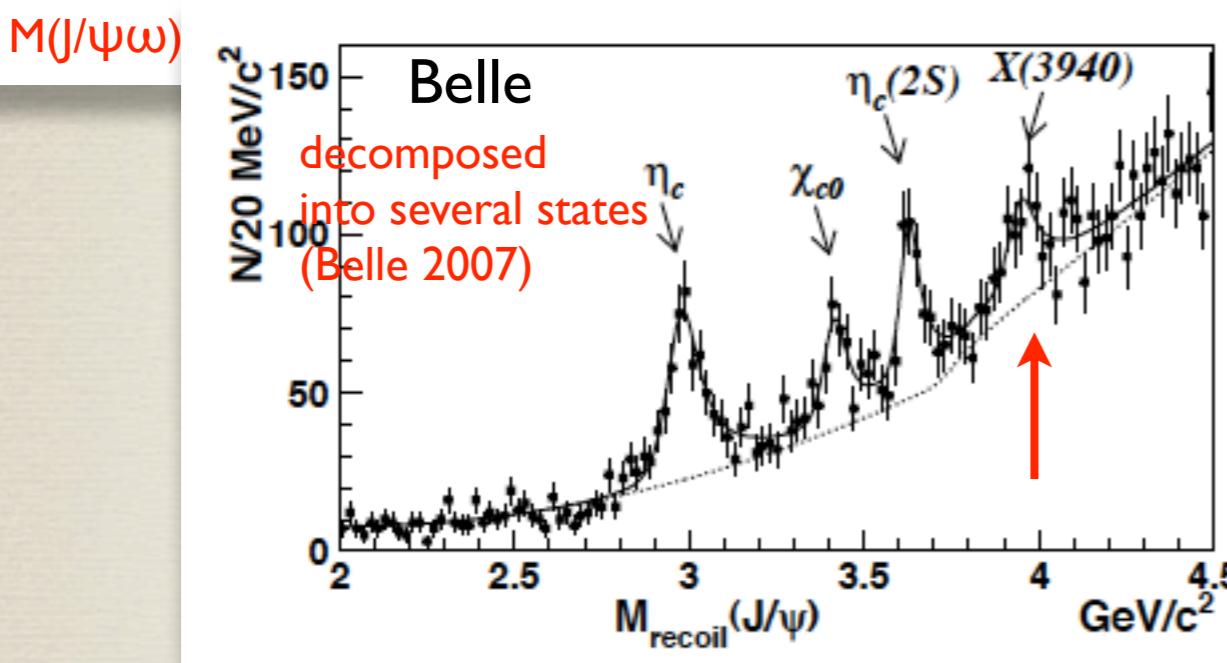

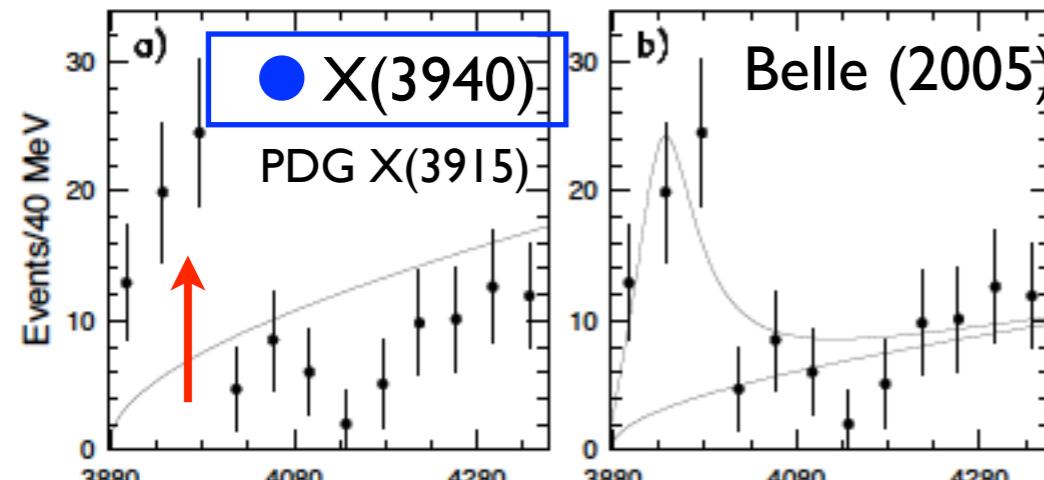

slightly “tilted” P-wave
distribution due to S-wave
interference

model independent determination of
S-wave phase

$$B(B \rightarrow X(3915) K) \times B(X(3915) \rightarrow J/\psi \omega) = (7.1 \pm 1.3 \pm 3.1) \times 10^{-5}.$$

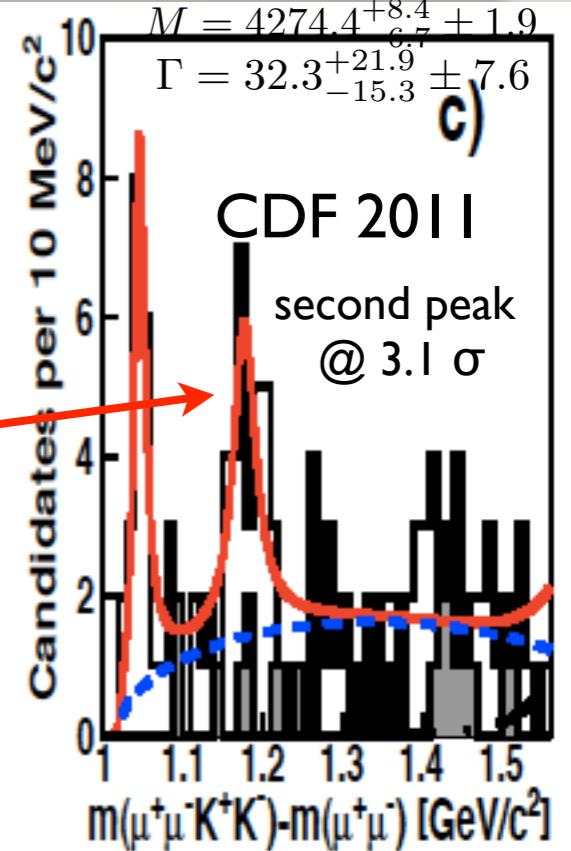

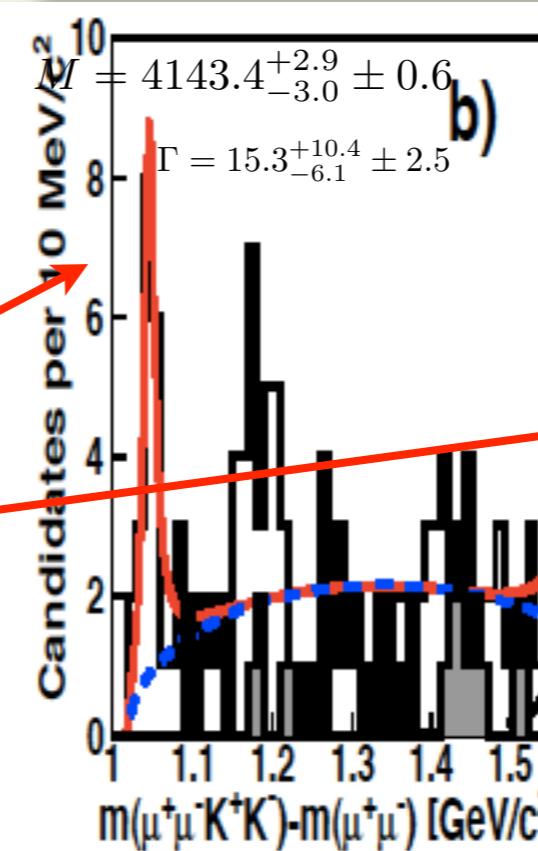

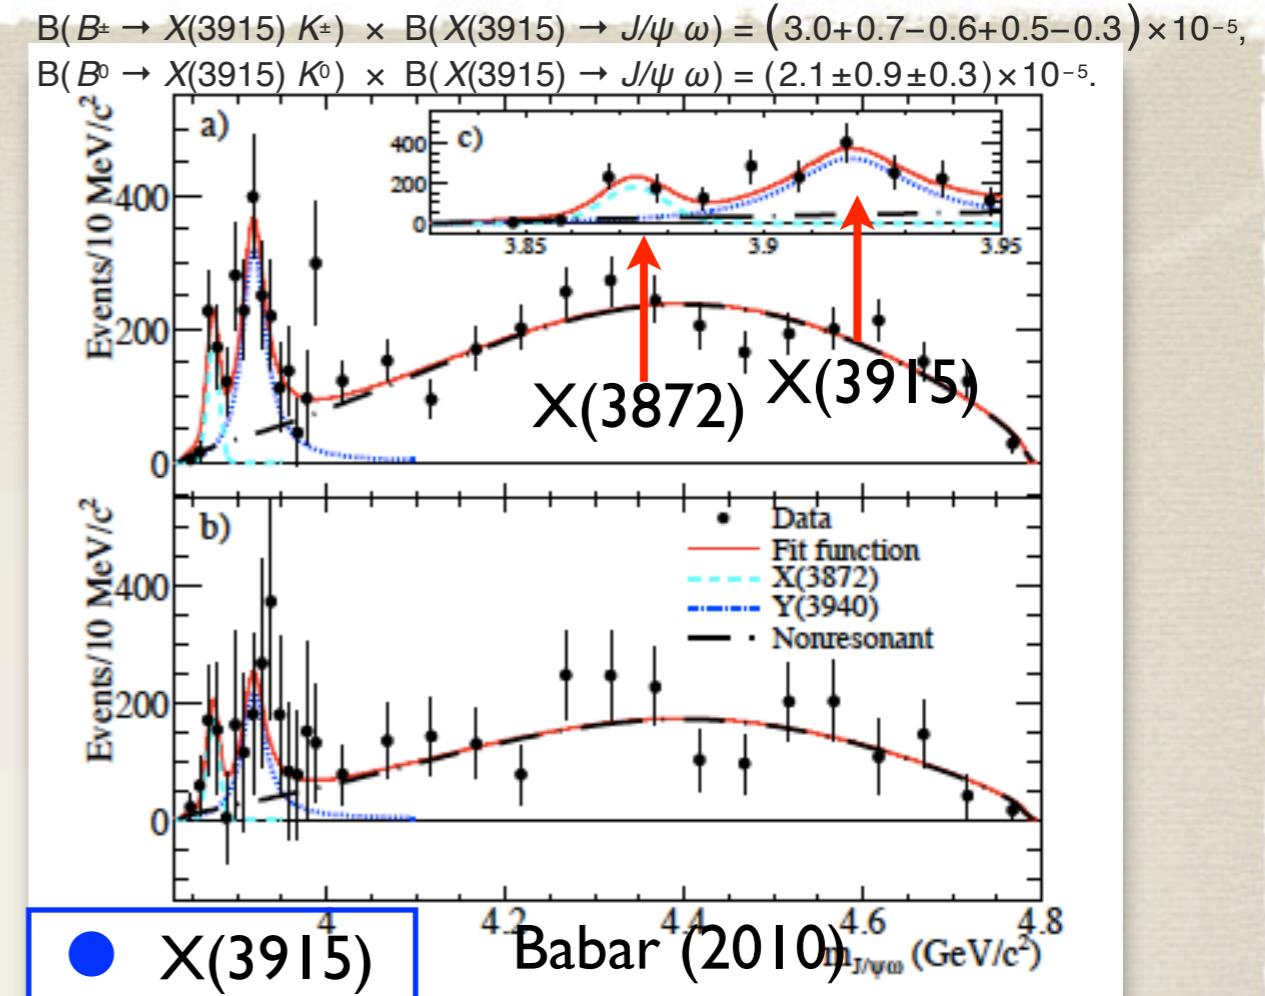

c̄c s̄s̄ candidate

M=3900 - 4200 range

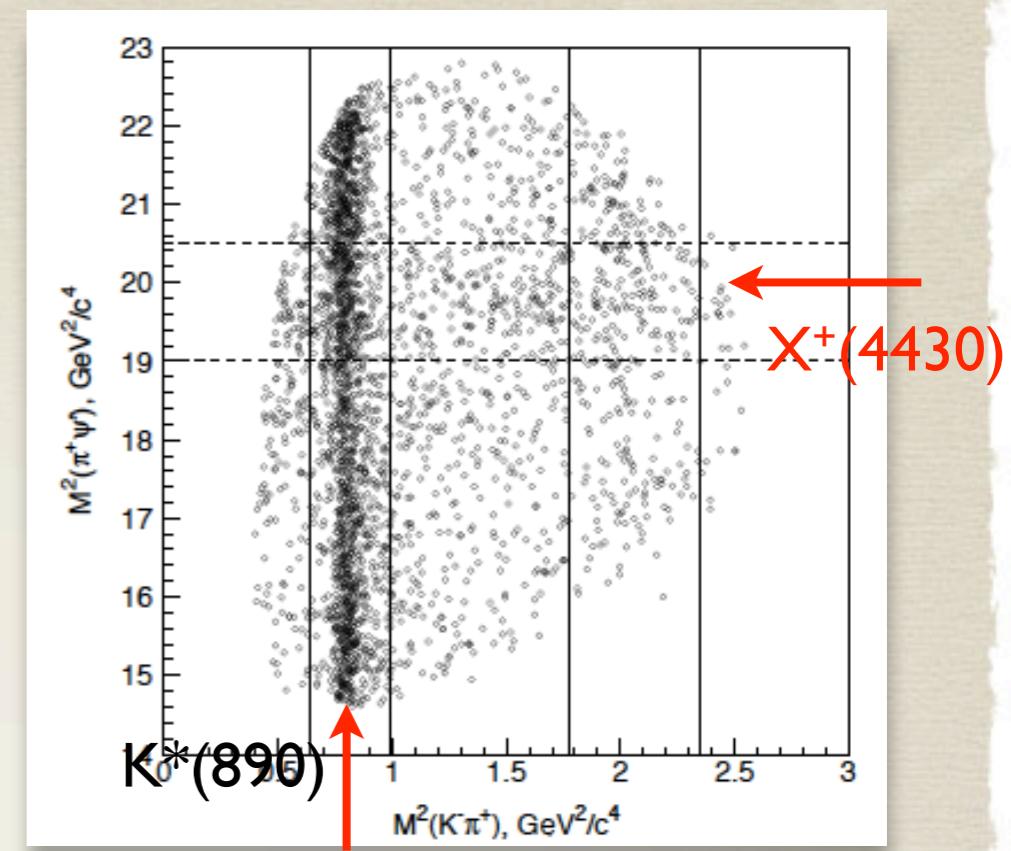

Y(4140)

not seen in Belle
(and possible Y(4275))

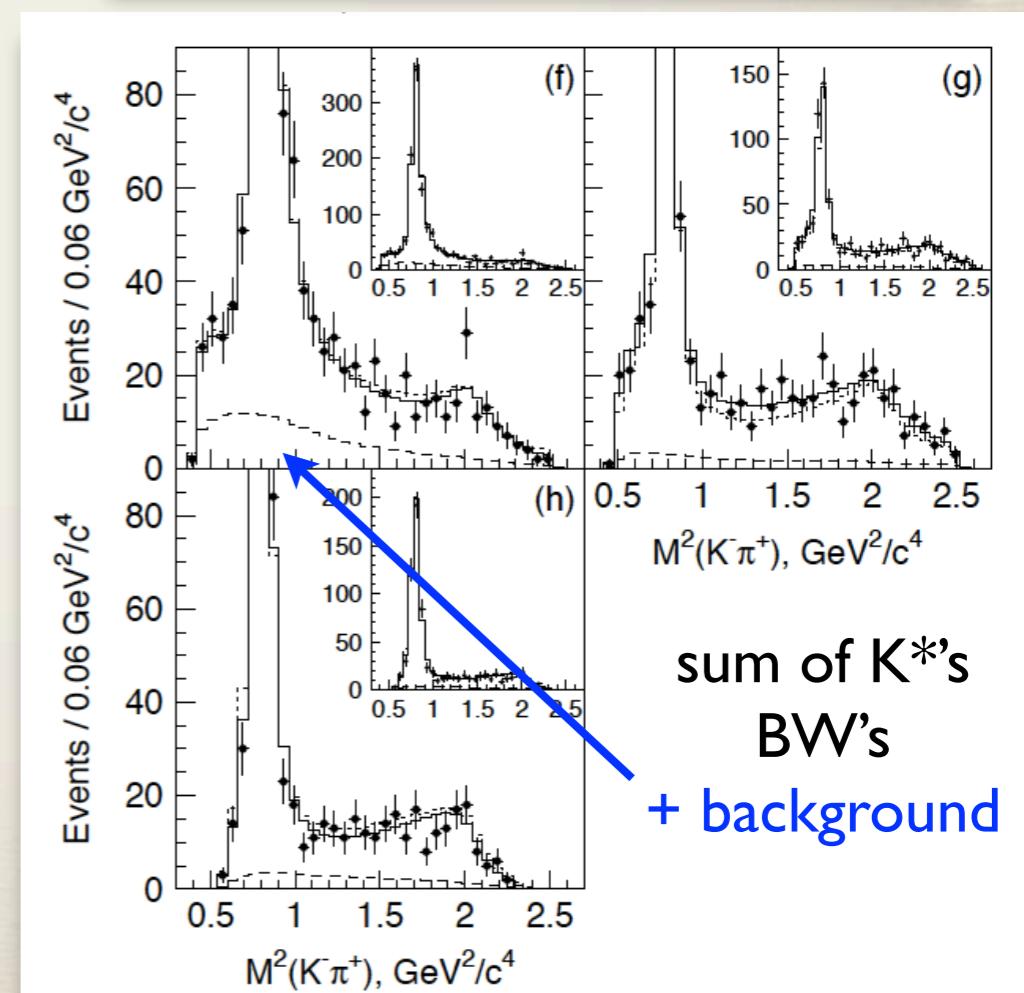

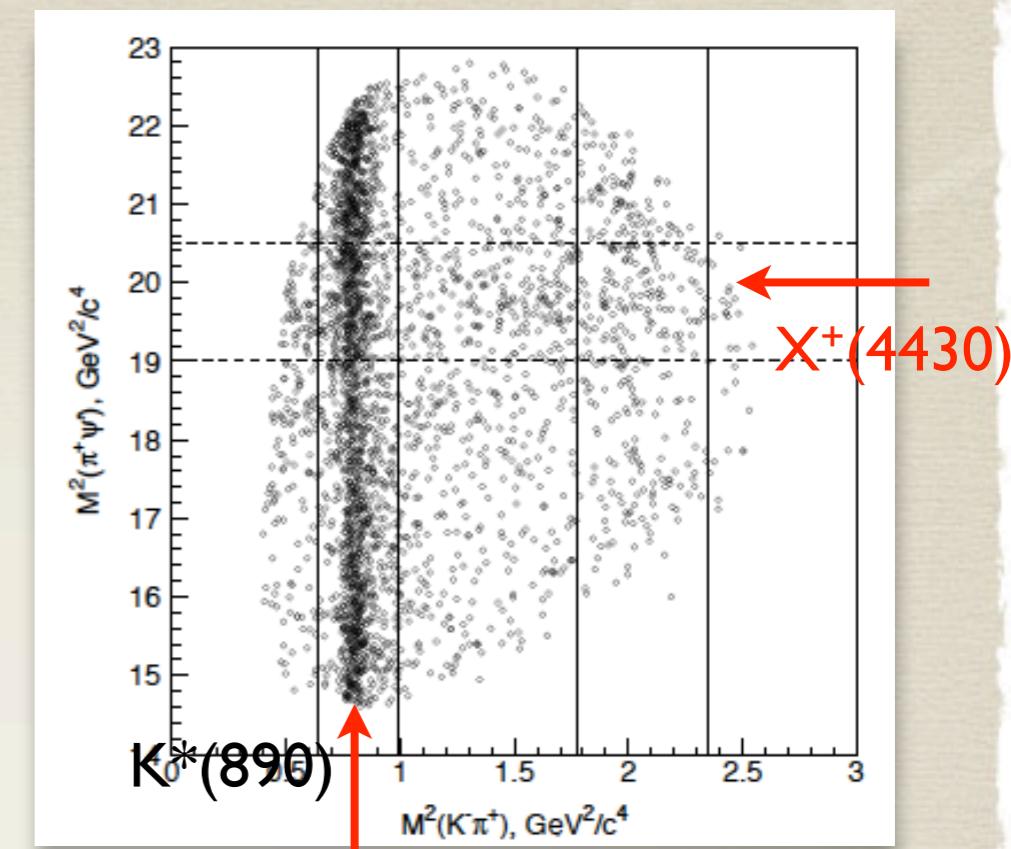

$$\mathcal{B}(B^+ \rightarrow Y(4140)K^+)/\mathcal{B}(B^+ \rightarrow J/\psi\phi K^+) = 0.149 \pm 0.039 \pm 0.024$$

- $X^\pm(4430)$ Belle (2009) $\bar{B}^0 \rightarrow K^-(\psi' \pi^+), B^+ \rightarrow K^0_s(\psi' \pi^+)$
not seen in BaBar (also in $J/\psi \pi^-$)

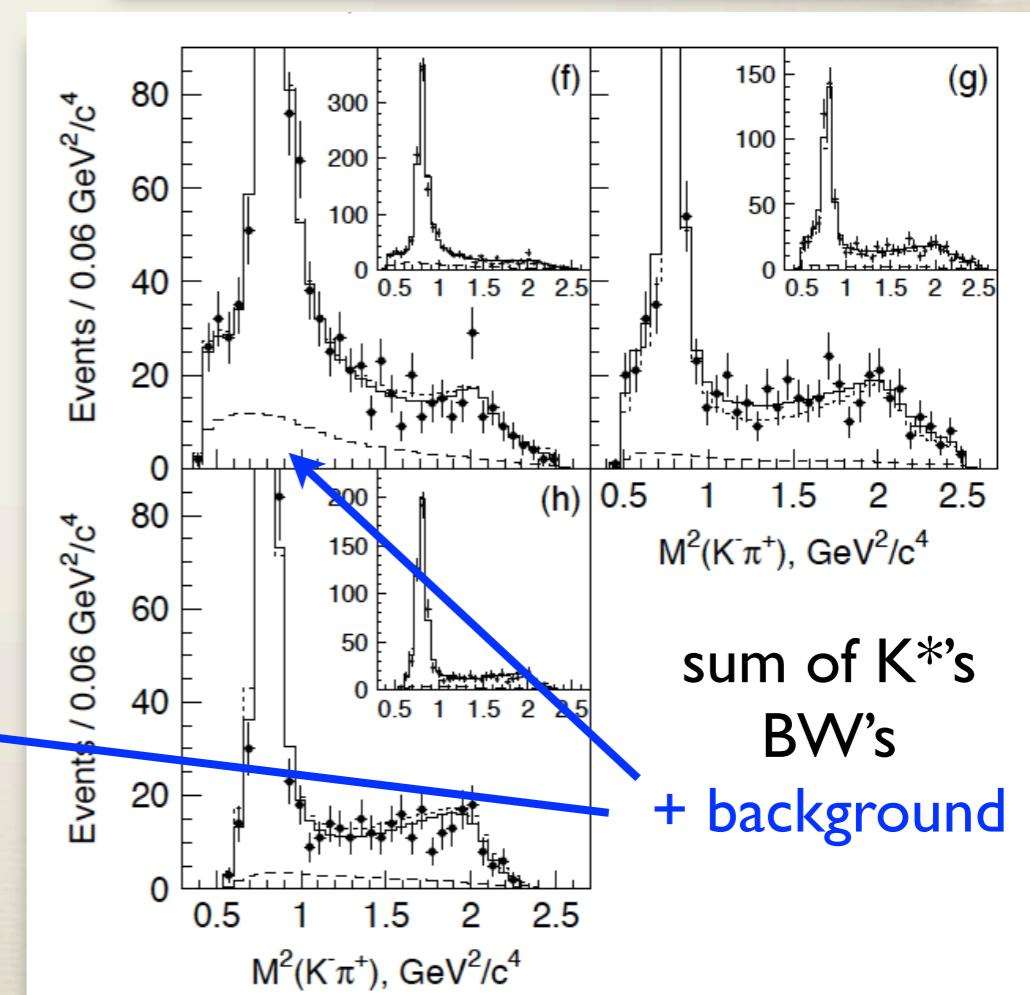

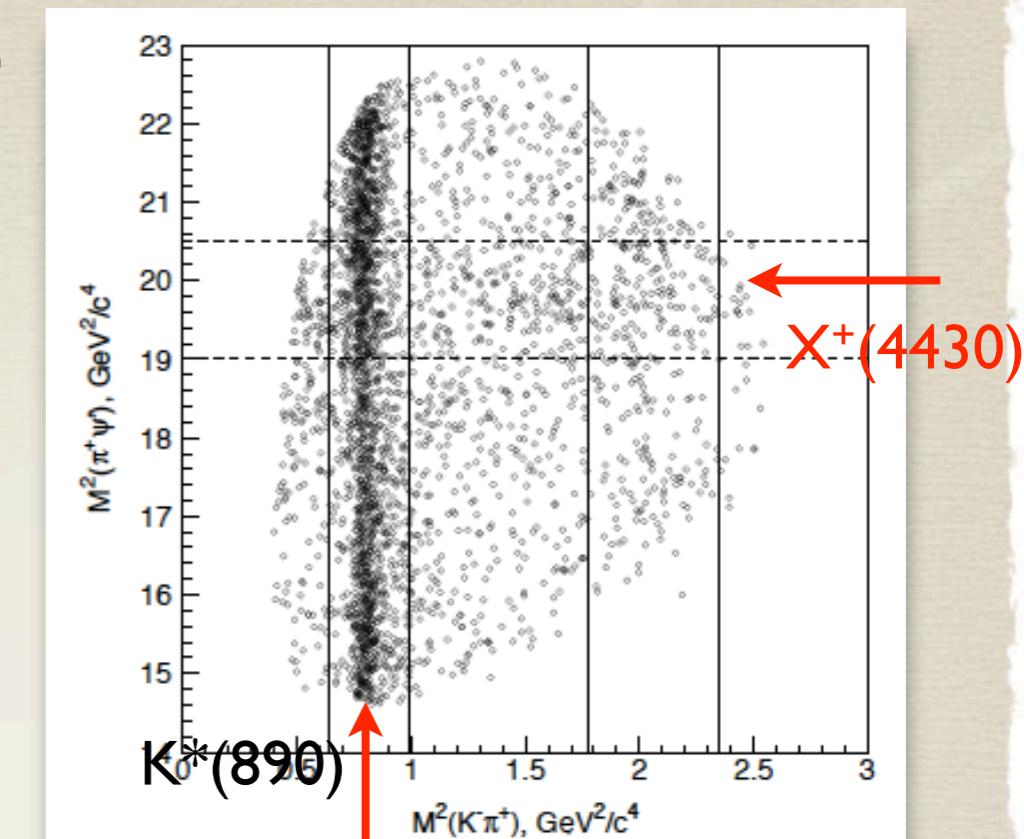

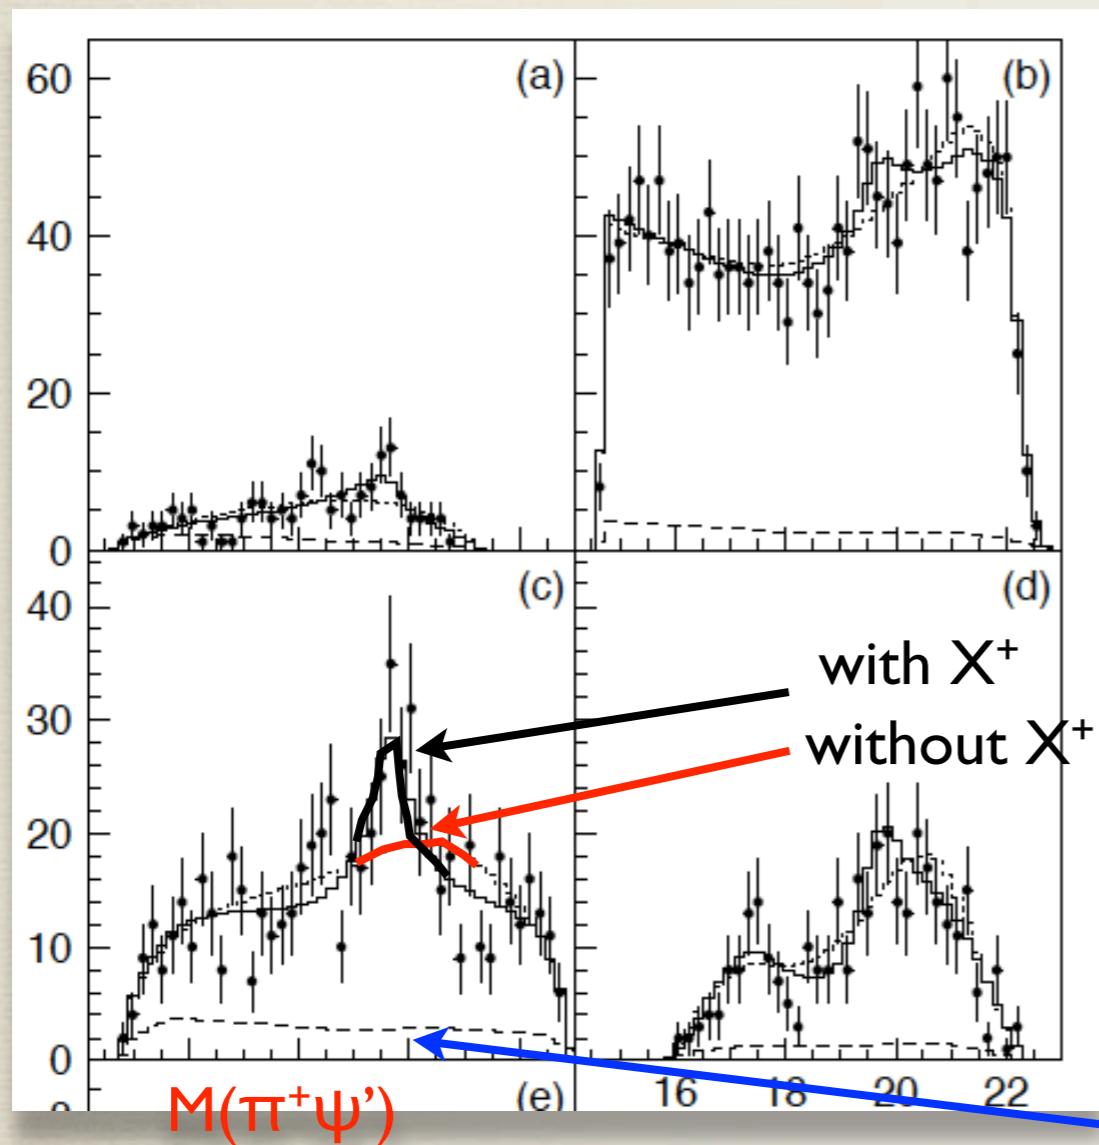

- $X^\pm(4430)$ Belle (2009) $\bar{B}^0 \rightarrow K^-(\psi' \pi^+), B^+ \rightarrow K^0_s(\psi' \pi^+)$
not seen in BaBar (also in $J/\psi \pi^-$)

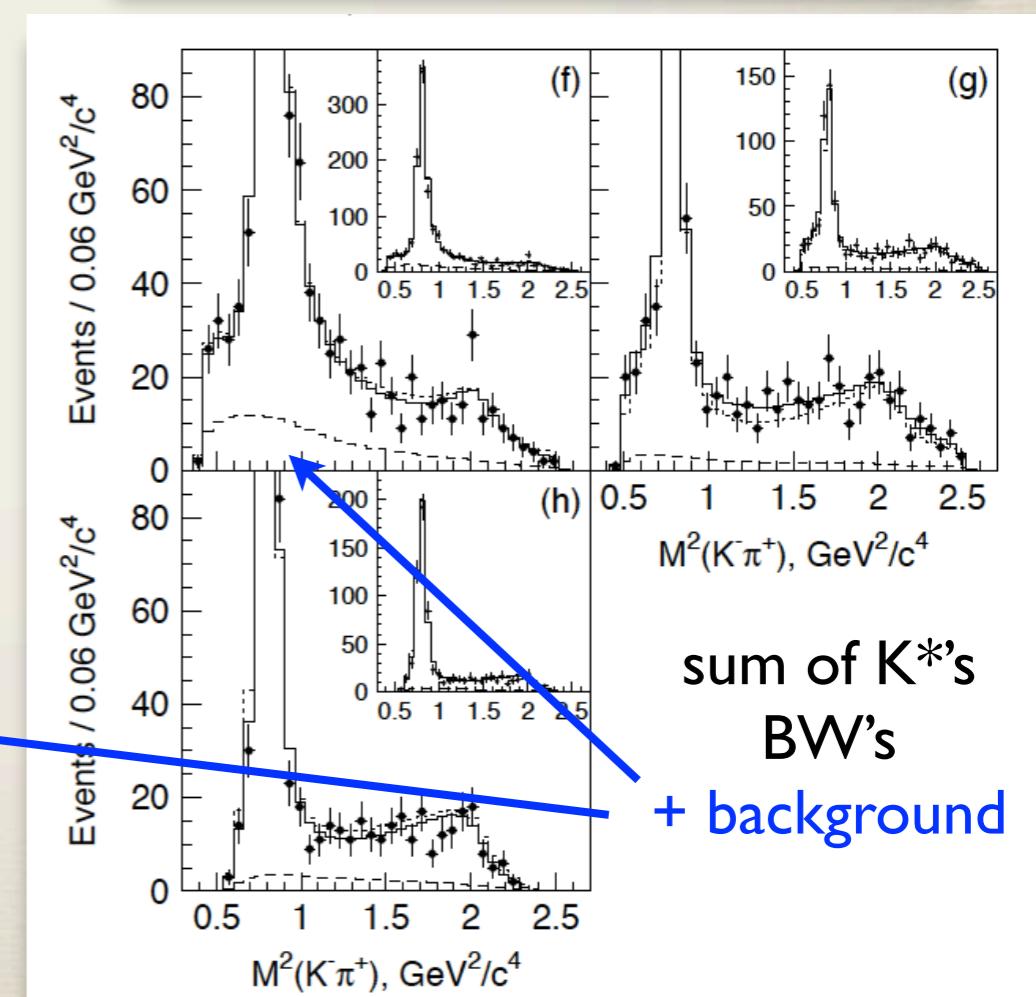

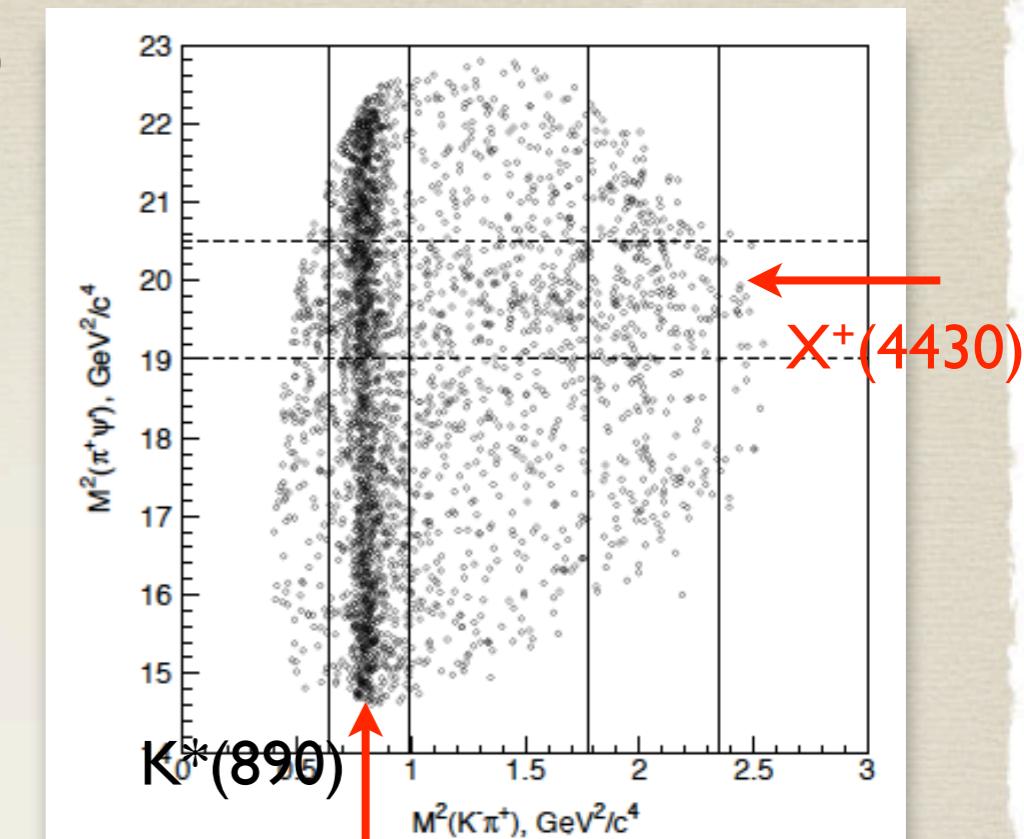

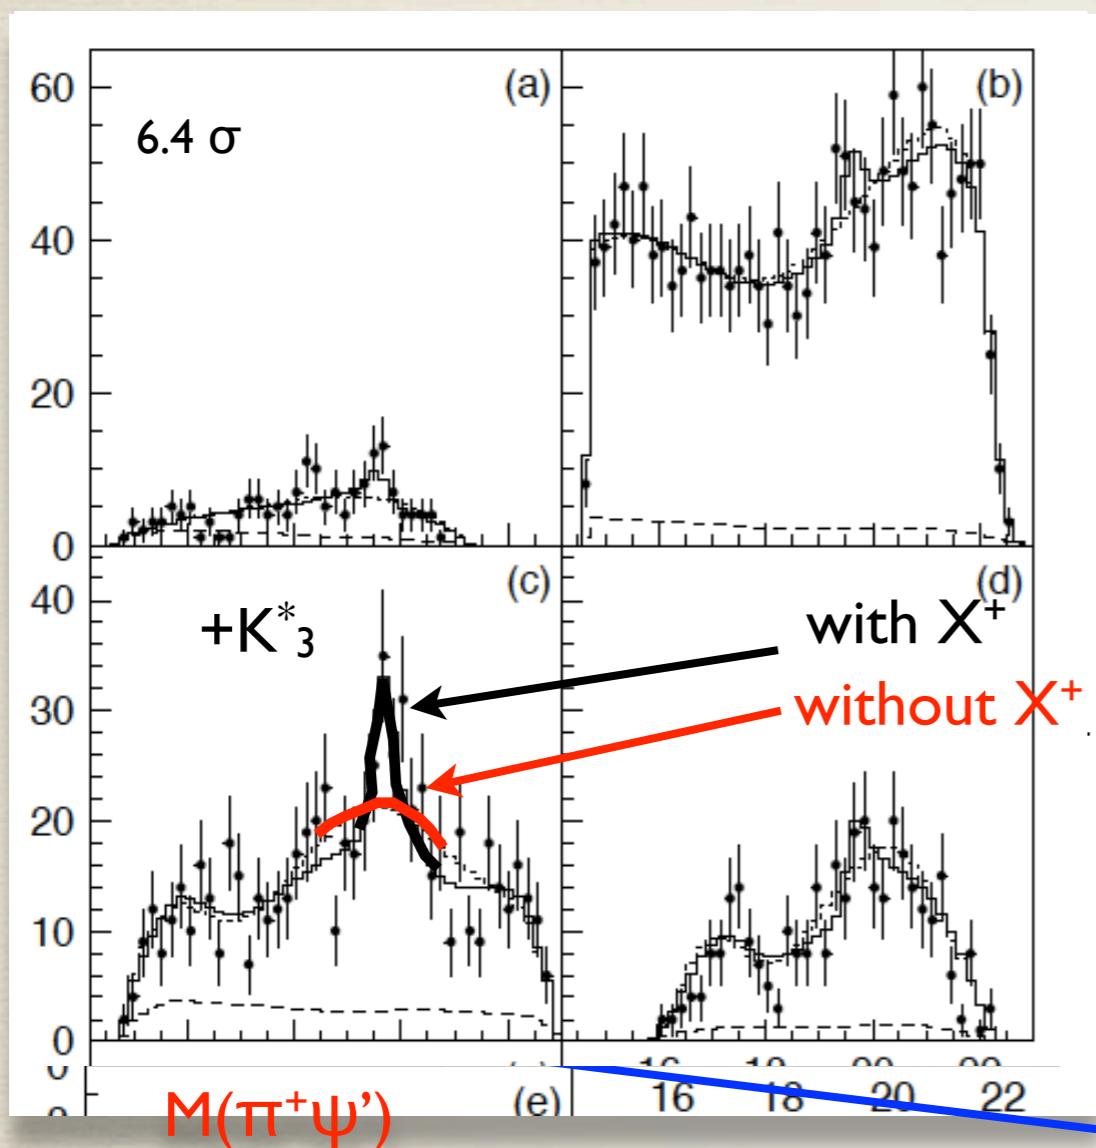

● $X^\pm(4430)$ Belle (2009) $\bar{B}^0 \rightarrow K^-(\psi' \pi^+), B^+ \rightarrow K^0_s(\psi' \pi^+)$

not seen in BaBar (also in $J/\psi \pi^-$)

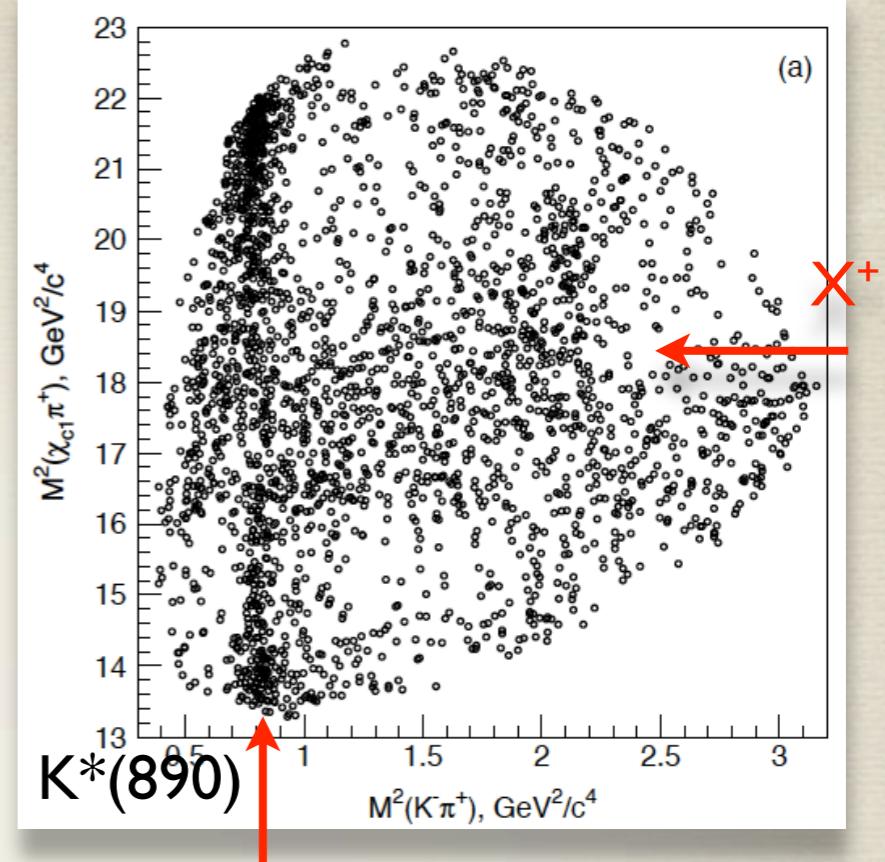

● $X^\pm(4430)$ Belle (2009) $\bar{B}^0 \rightarrow K^-(\psi' \pi^+), B^+ \rightarrow K^0_s(\psi' \pi^+)$

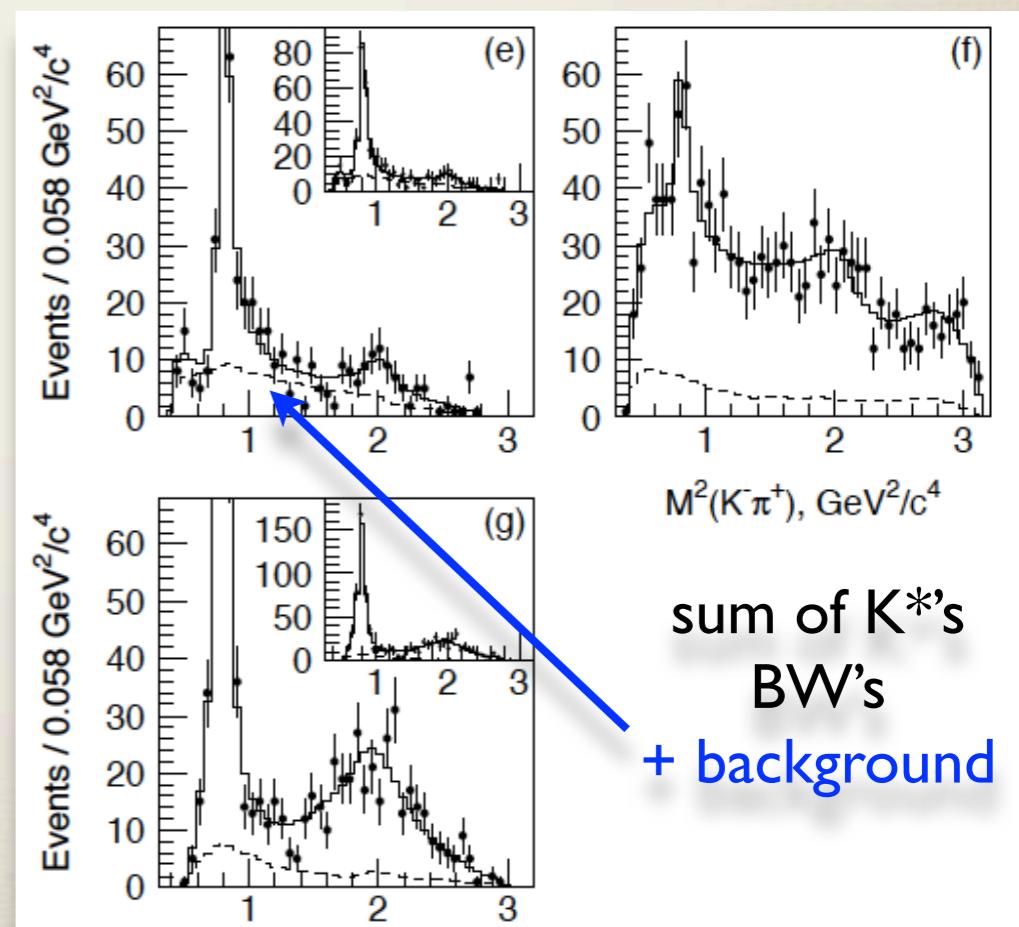

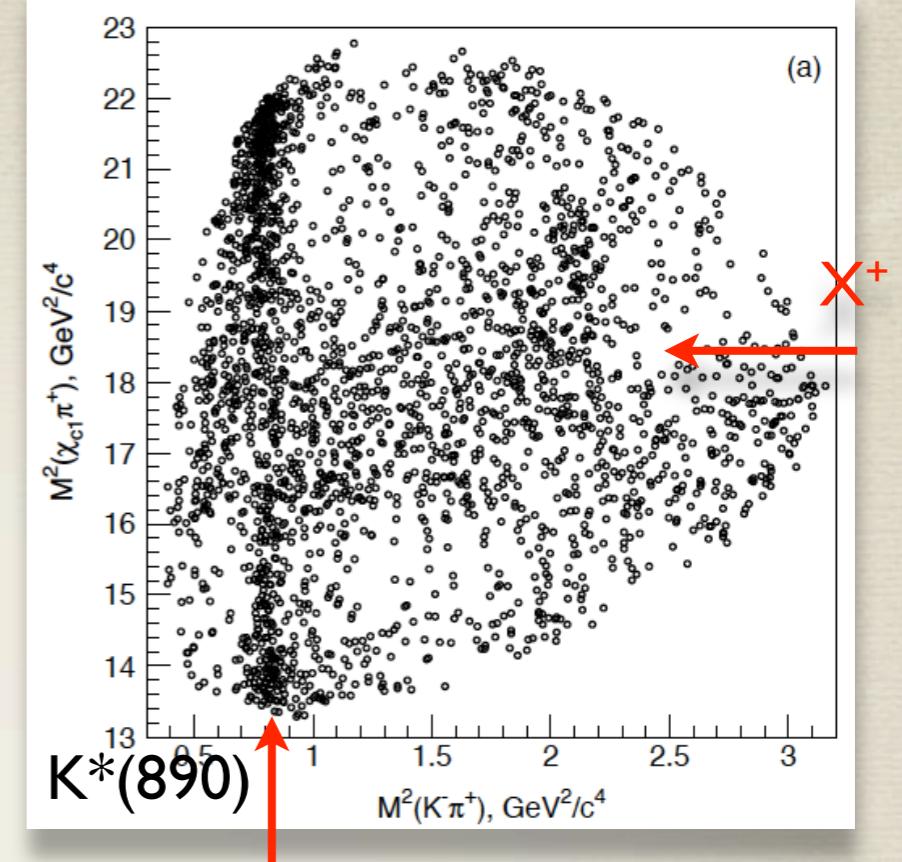

not seen in BaBar (also in $J/\psi \pi^-$)

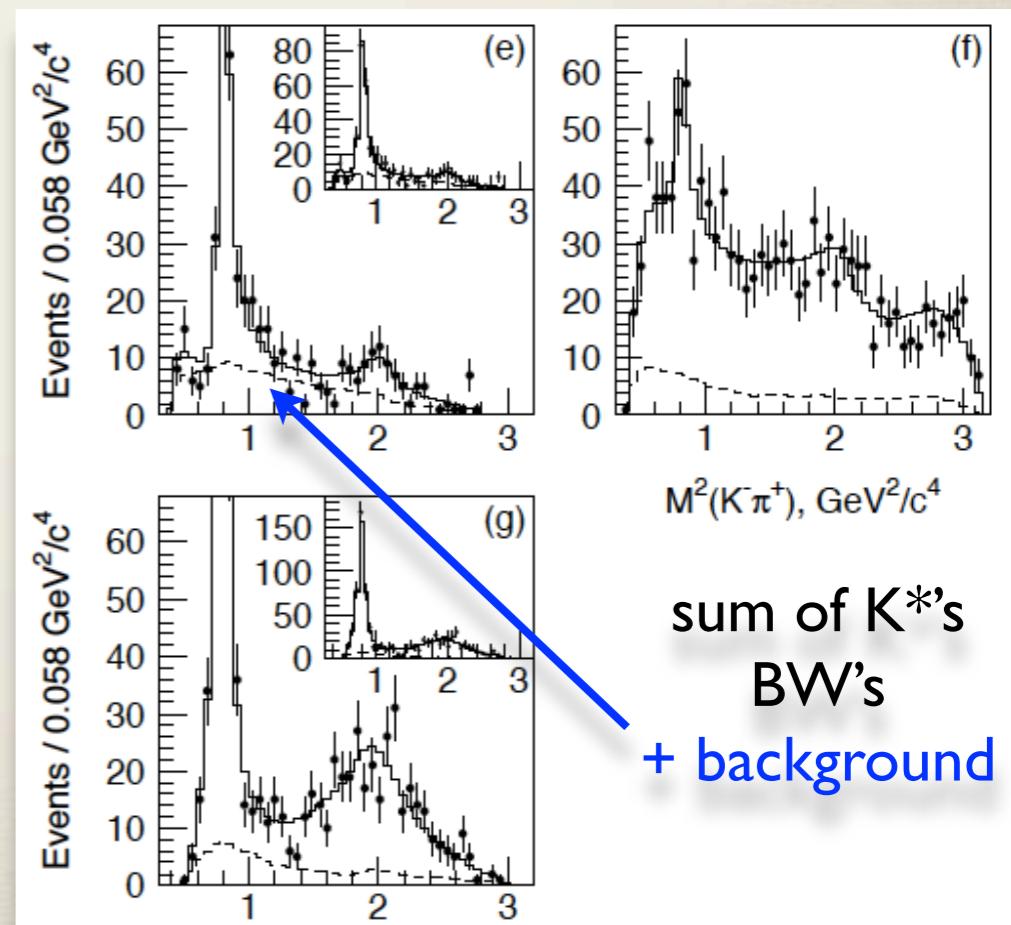

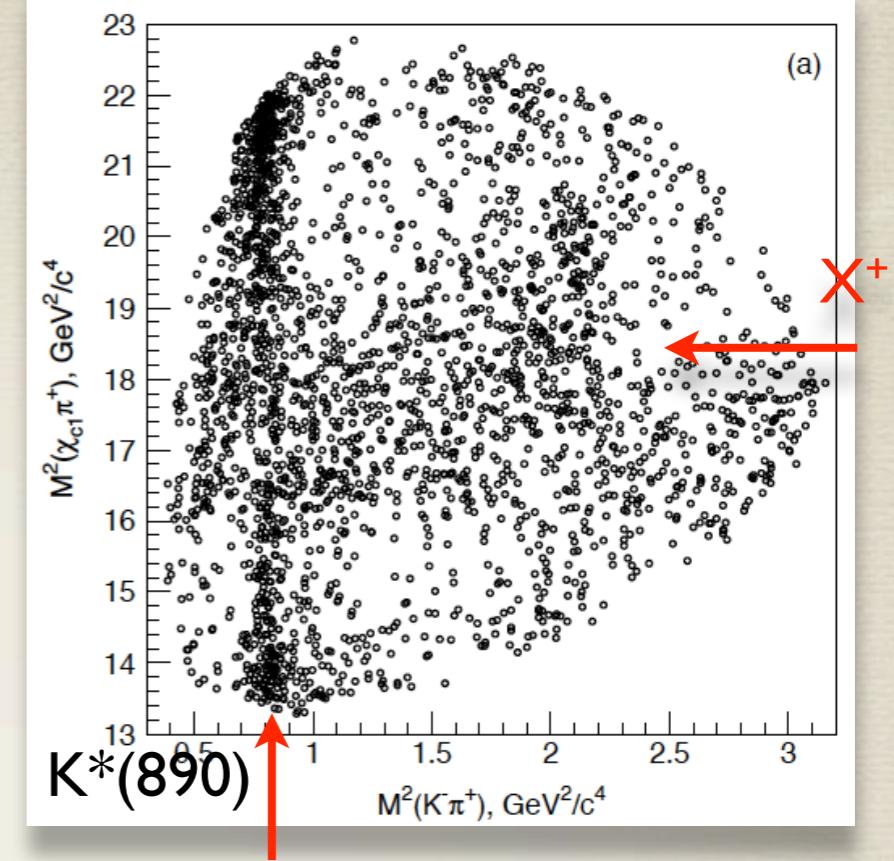

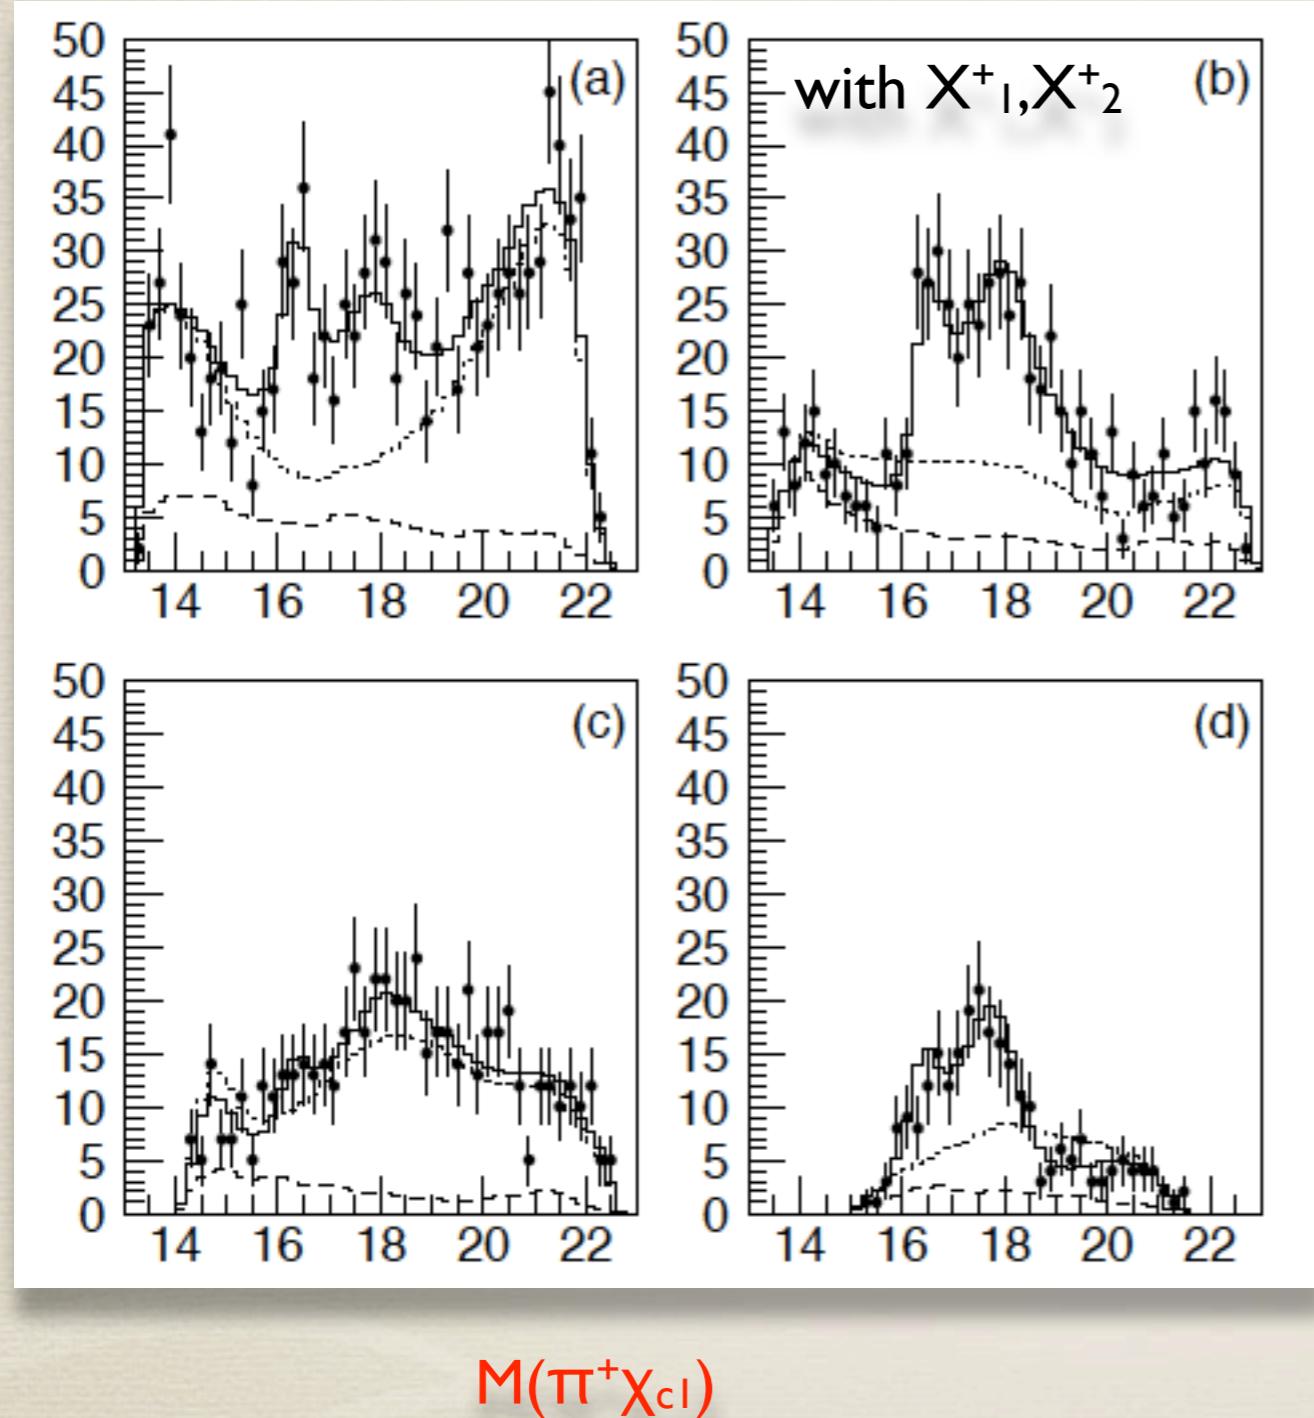

- $X^+ (4050, 4250)$ Belle (2009) $\bar{B}^0 \rightarrow K^-(\chi_{c1}\pi^+)$

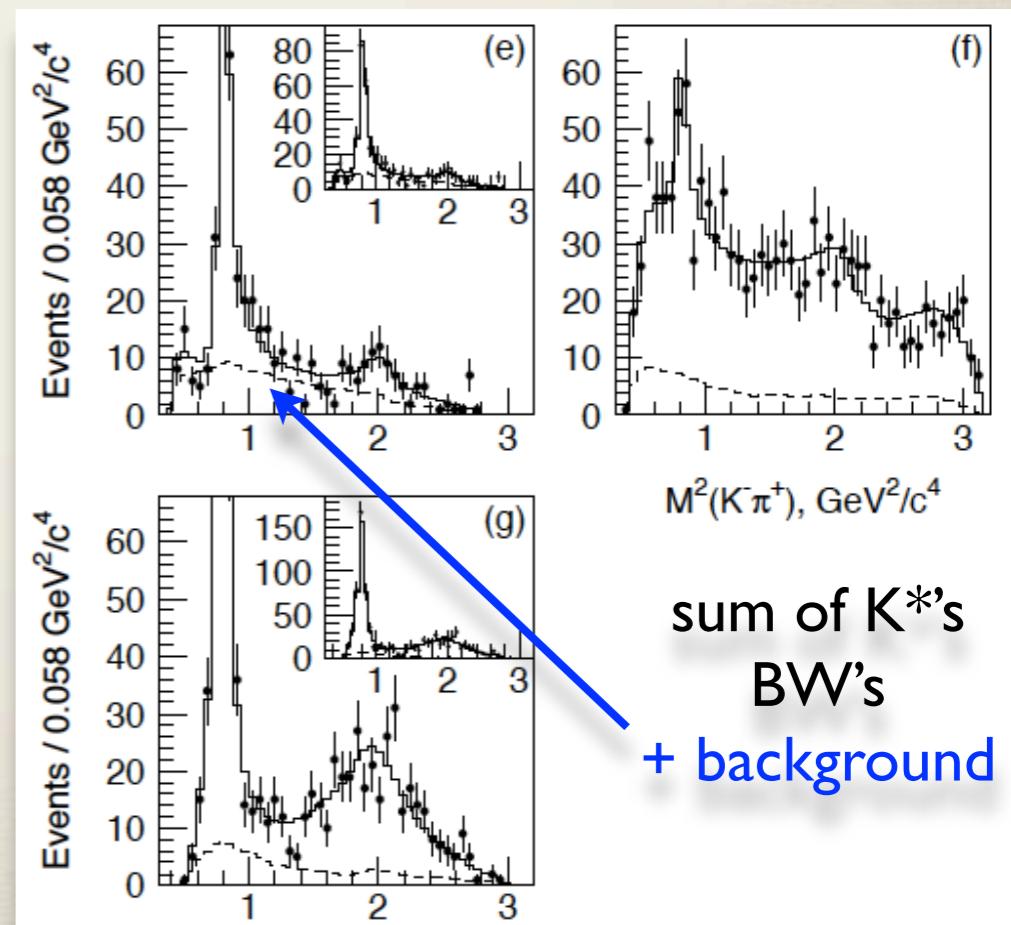

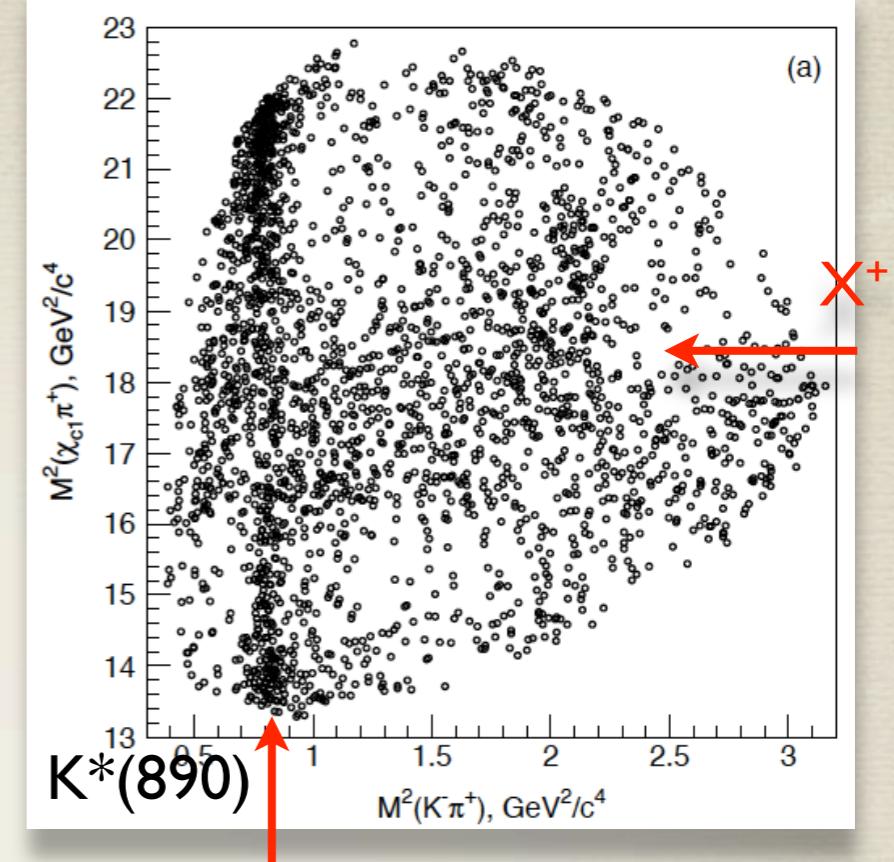

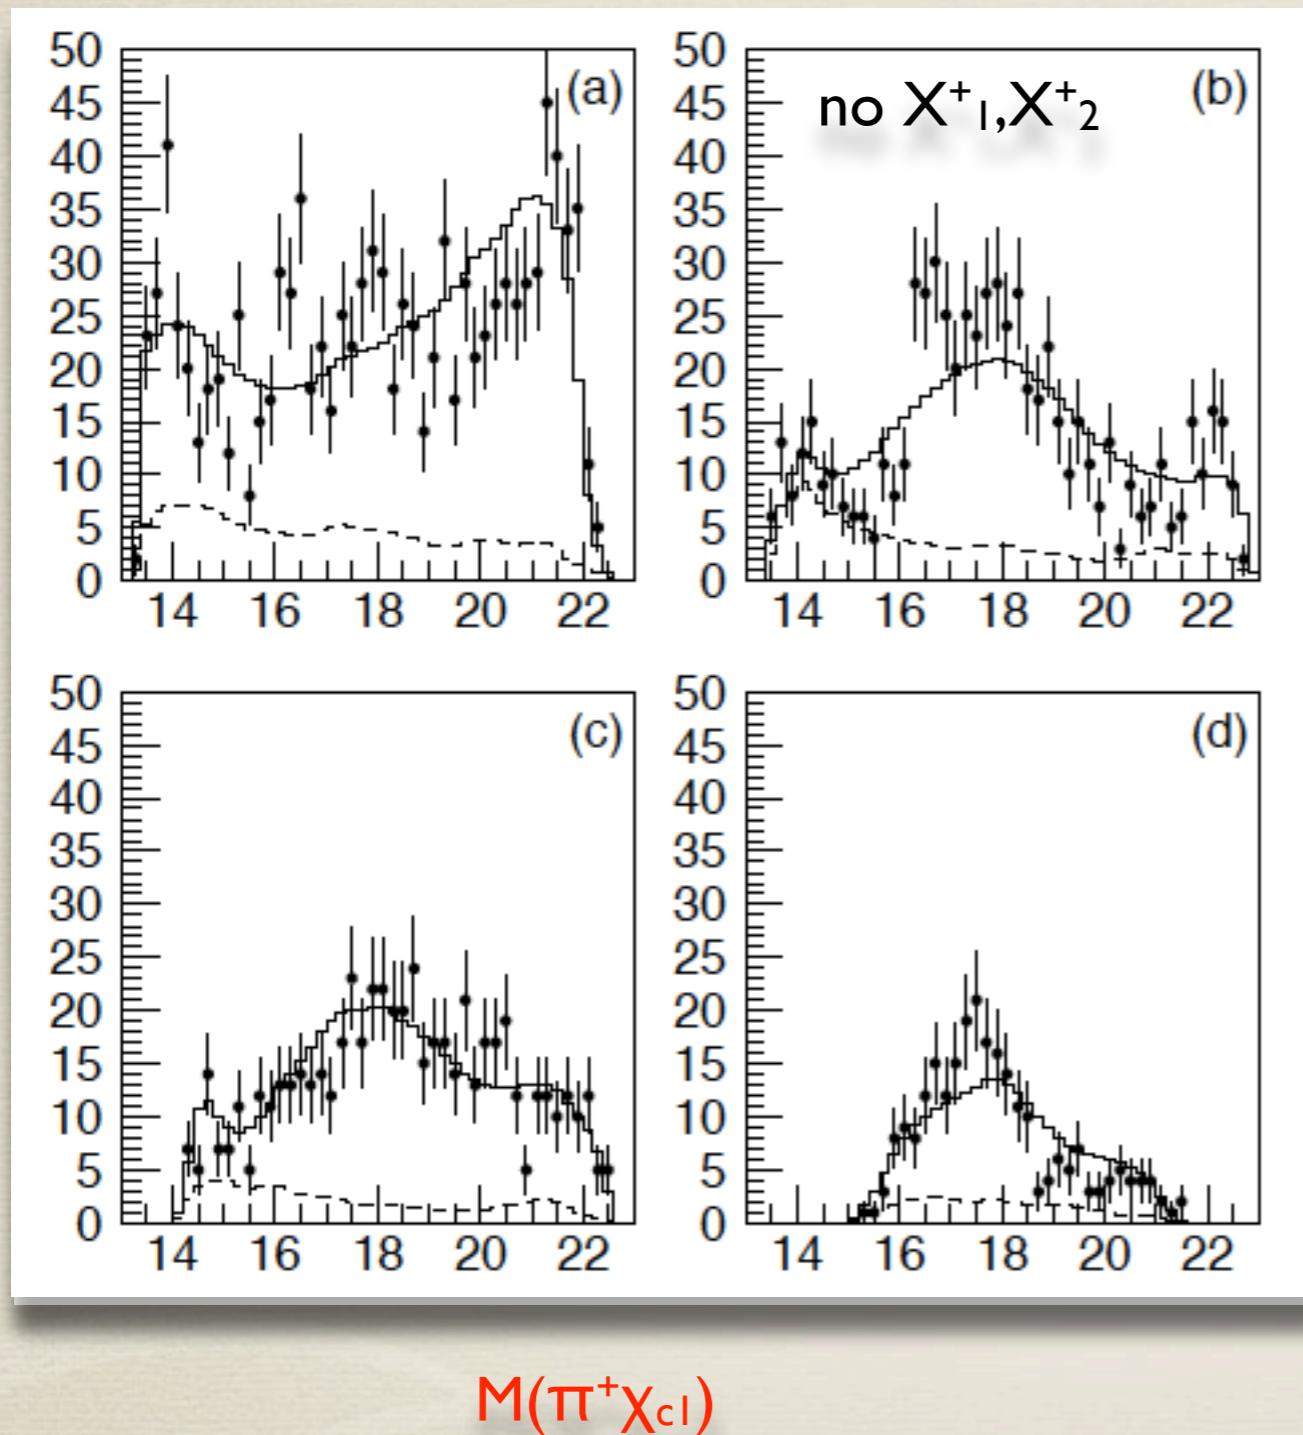

- $X^+ (4050, 4250)$ Belle (2009) $\bar{B}^0 \rightarrow K^-(\chi_{c1}\pi^+)$

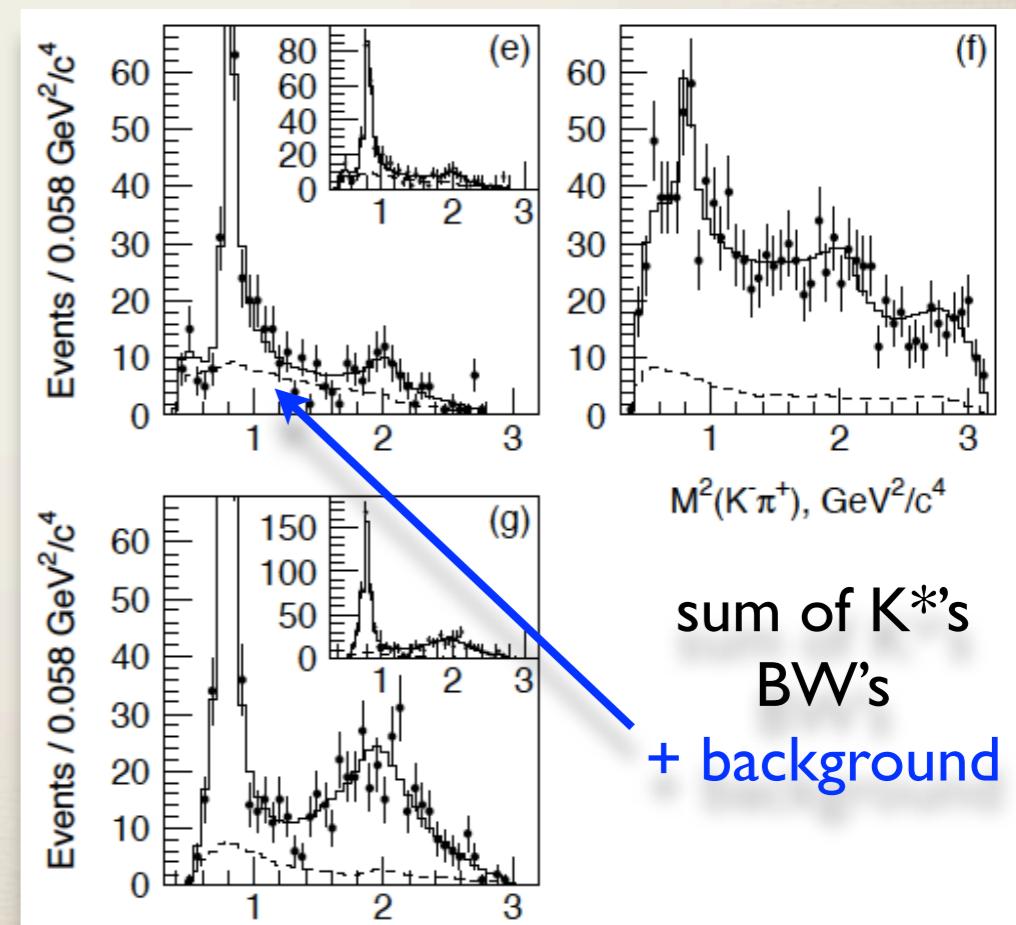

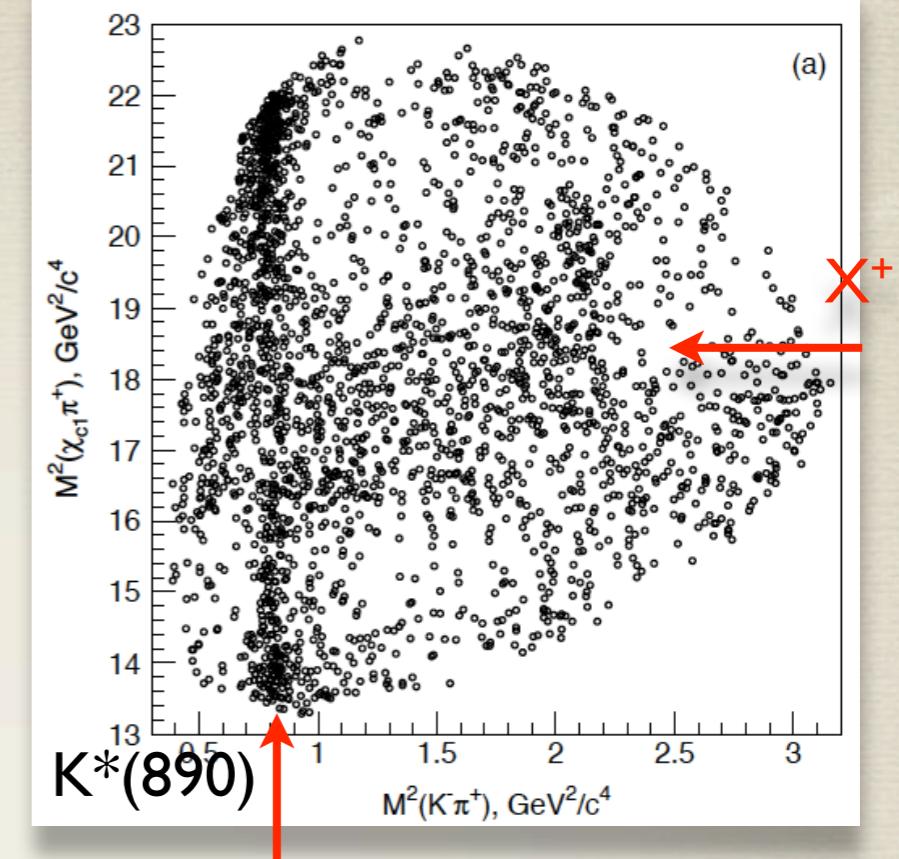

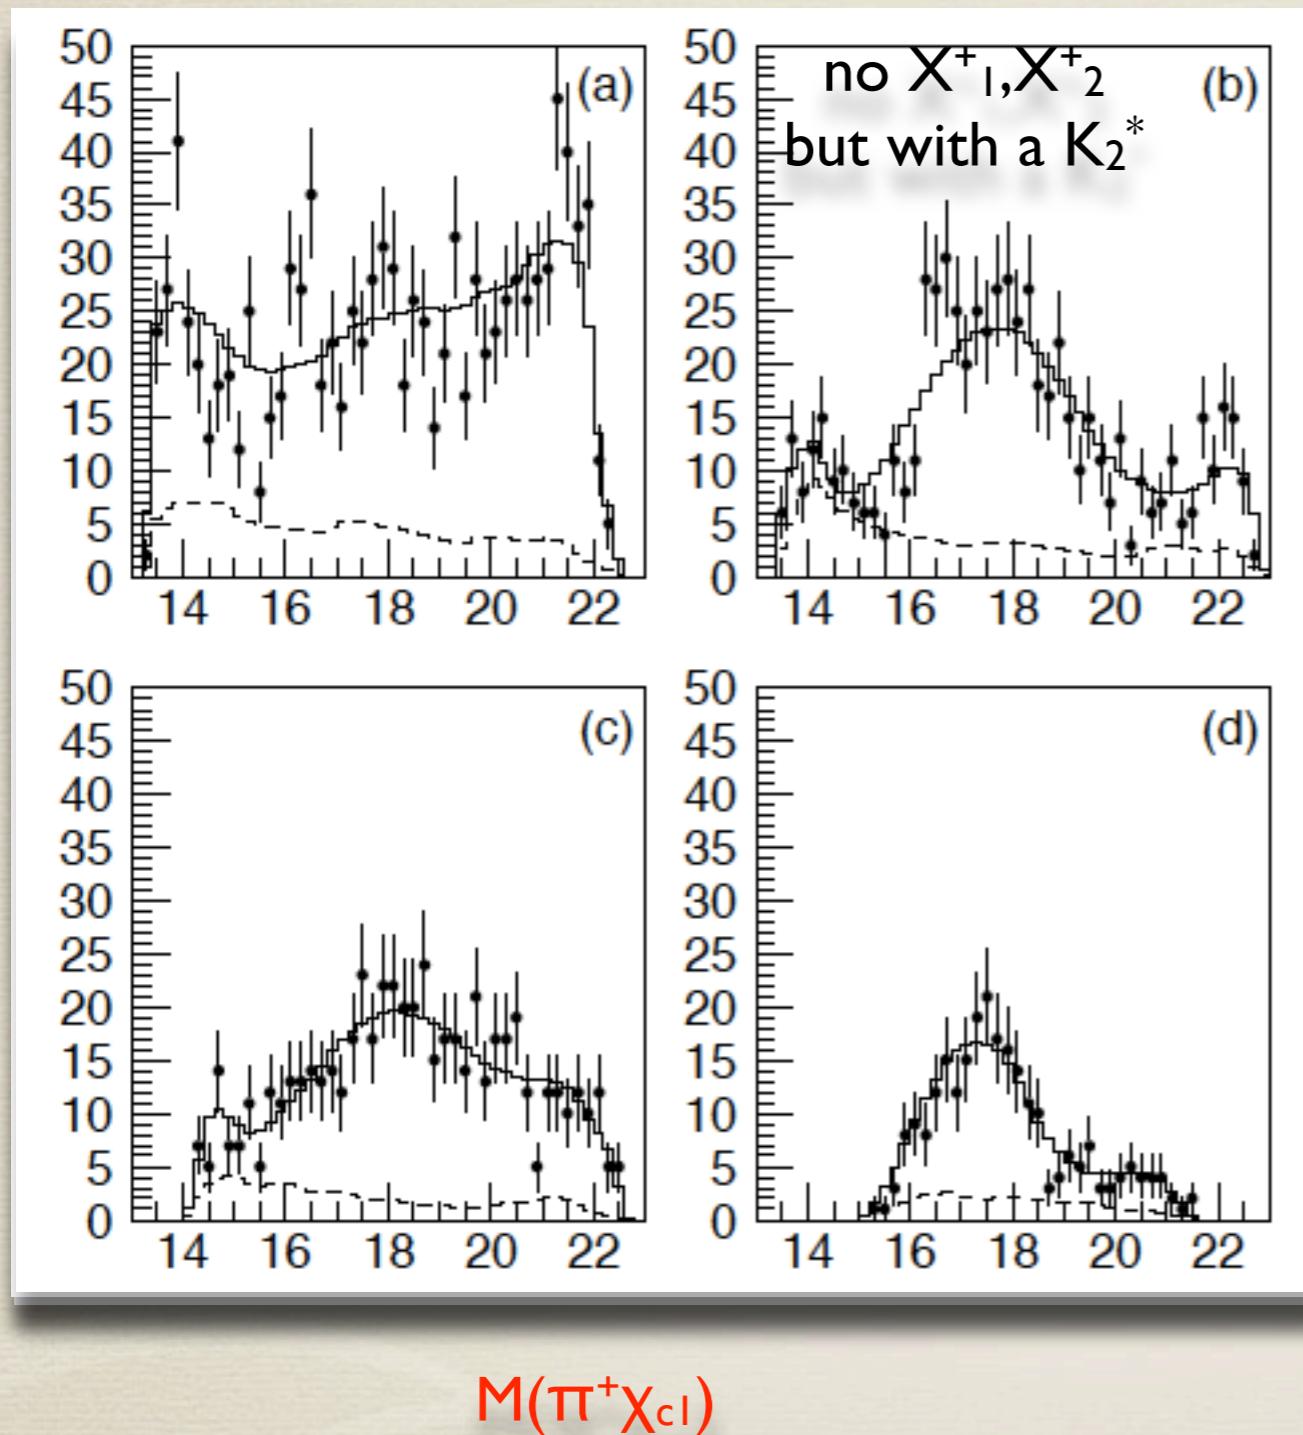

- $X^+ (4050, 4250)$ Belle (2009) $\bar{B}^0 \rightarrow K^-(\chi_{c1}\pi^+)$
