

BitCom: GAMBIT website,
documentation, wiki,
tutorials, email lists, &c., &c.

GAMBIT XV

Final transition to new webpage

- Please check out: <https://gambitbsm.org/>
- Will now remove public info on <https://gambit.hepforge.org>
 - Please raise any objections asap
 - Please do not make any further updates to old site
 - One outstanding issue to be discussed here: <https://gambit.hepforge.org/downloads/>
- To update new webpage:
 - Clone the `GambitBSM.github.io` repo
 - Follow instructions on repo `README.md` (and please update if you find anything wrong/outdated)
 - Note in particular that:
 - You should check locally (`localhost:1313`) that your changes build well
 - There is a difference between pushing to the repo master and deploying the website

Current issues

- Webpage development:
 - More testing on practical use by community members
 - Simplify (possibly remove) the use of `Node.js`
 - Find more permanent solution for storage of large files (mostly relevant for tutorials)
- Still no solution for wiki (needs to be private)
- Should we long-term keep hepforge email lists?
 - Prone to failures, but are alternatives better?
