Precise measurement of the tau-lepton mass at Belle II

Monday 4 December 2023 14:10 (20 minutes)

The low-background environment of electron-positron collisions along with the large expected sample size and a hermetic detector make Belle II a premier experiment for studying tau-lepton physics. This talk presents recent world-leading results from Belle II determinations of the tau lepton mass.

Name of collaboration or list of co-authors

Belle II

Primary author: VAHSEN, Sven (University of Hawaii (US))

Presenter: ZLEBCEK, Radek (Deutsches Elektronen-Synchrotron)

Session Classification: Monday after lunch
