My list of suggestions (open for more input)

Specific topics to tackle
- DDML integration into Key4hep stack
- Improved (e.g. versioned) documentation for podio / EDM4hep
- Purge GaudiAlg from (some) Key4hep packages (switch to Gaudi::Algorithm or Functional)
- Implement some usability improvements / utilities

The usual things to do at a hackathon:
- Fix some bugs / issues
- Review some open PRs
- Discuss / brainstorm
