Progress of the Super Tau Charm Facility

Friday 30 August 2024 12:20 (20 minutes)

The Super Tau Charm Facility (STCF), a planned symmetric electron-positron collider in China, aims to facilitate e^+e^- collisions across a center-of-mass energy range of 2 to 7 GeV, targeting a peak luminosity of $0.5 \times 10^{35} \text{ cm}^{-2} \text{ s}^{-1}$. With an anticipated annual integrated luminosity exceeding 1 ab^{-1} , the STCF is poised to generate vast datasets. These will enable precision measurements of XYZ particles' properties, exploration of new CP violation sources within strange-hyperon and tau-lepton sectors, and accurate Cabibbo angle (θ_c) measurements to test the unitarity of the CKM matrix; search for anomalous decays with sensitivities extending down to the level of SM-model expectations, among other objectives. This talk will cover the STCF's physics goals and outline the latest advancements in the project's R&D.

Internet talk

No

Is this an abstract from experimental collaboration?

Yes

Name of experiment and experimental site

STCF

Is the speaker for that presentation defined?

Yes

Details

Already indicated above

Primary author: XU, Lailin (University of Science and Technology of China (CN))

Presenter: XU, Lailin (University of Science and Technology of China (CN))

Session Classification: High Energy Particle Physics

Track Classification: Main topics: High Energy Particle Physics
