(UG*) Deeply Learning the Position Reconstruction of Antihydrogen Annihilations in ALPHA-g

Monday 27 May 2024 16:45 (15 minutes)

The ALPHA-g experiment at CERN aims to perform the first-ever direct measurement of the effect of gravity on antimatter, determining its weight to within 1% precision. At TRIUMF, we are working on a new deep learning method based on the PointNet architecture to predict the height at which the antihydrogen atoms annihilate in the detector. This approach aims to improve upon the accuracy, efficiency, and speed of the existing annihilation position reconstruction. In this presentation, I will report on the promising preliminary performance of the model and discuss future development.

Keyword-1

antimatter

Keyword-2

deep learning

Keyword-3

Primary author: FERREIRA, Ashley (TRIUMF (CA))

Co-authors: CAPRA, Andrea; LI, Anna; XU, Anqi; DUQUE, Daniel; SMITH, Gareth; MARTIN, Lars; FUJIWARA, Makoto; FEDORKO, Wojtek; SAITO, Yukiya

Presenter: FERREIRA, Ashley (TRIUMF (CA))

Session Classification: (DNP) M3-4 Precision Measurements in nuclear and particle physics I | Mesures de précision en physique nucléaire et en physique des particules I (DPN)

Track Classification: Technical Sessions / Sessions techniques: Nuclear Physics / Physique nucléaire (DNP-DPN)
