ATLAS Upgrades for the HL-LHC

Thursday, May 30, 2024 8:15 AM (30 minutes)

The ATLAS detector upgrade for the HL-LHC, scheduled to begin operation in 2029, is an ambitious program to extend the LHC physics program of discoveries and measurements with a record luminosity of high-energy parton collisions. Canadian institutions are playing a leading role in designing, building, and commissioning the upgraded detector, including the charged-particle Inner Tracker, the Liquid Argon Calorimeter, and the Muon Spectrometer. A snapshot of these projects is presented, describing their new cutting-edge technologies, progress on their construction, and how the ATLAS Collaboration is preparing for their physical & software integrations.

Keyword-1

ATLAS

Keyword-2

HL-LHC

Keyword-3

Particle Physics

Primary author: DANDOY, Jeff (Carleton University (CA))

Presenter: DANDOY, Jeff (Carleton University (CA))

Session Classification: (PPD) R1-1 Detectors | Détecteurs (PPD)

Track Classification: Technical Sessions / Sessions techniques: Particle Physics / Physique des particules (PPD)
