Deinstag 13th November

CBI A³

CBI A³ DFGN SWINBURNE UNIVERSITY OF TECHNOLOGY DESIGN FACTORY MELBOURNE CERN IdeaSquare

Random Power

HYLIGHT

Meta-HiLight

Your aim is to ideate **new applications for this technology**.
Not what it is currently being used for!

You might not know 100% if it will work in this new application – that's ok….don't get too stuck on the technical details – we are after radical innovation! It takes time! The LHC didn't have everything worked out when they started, it took them 10 years to build!

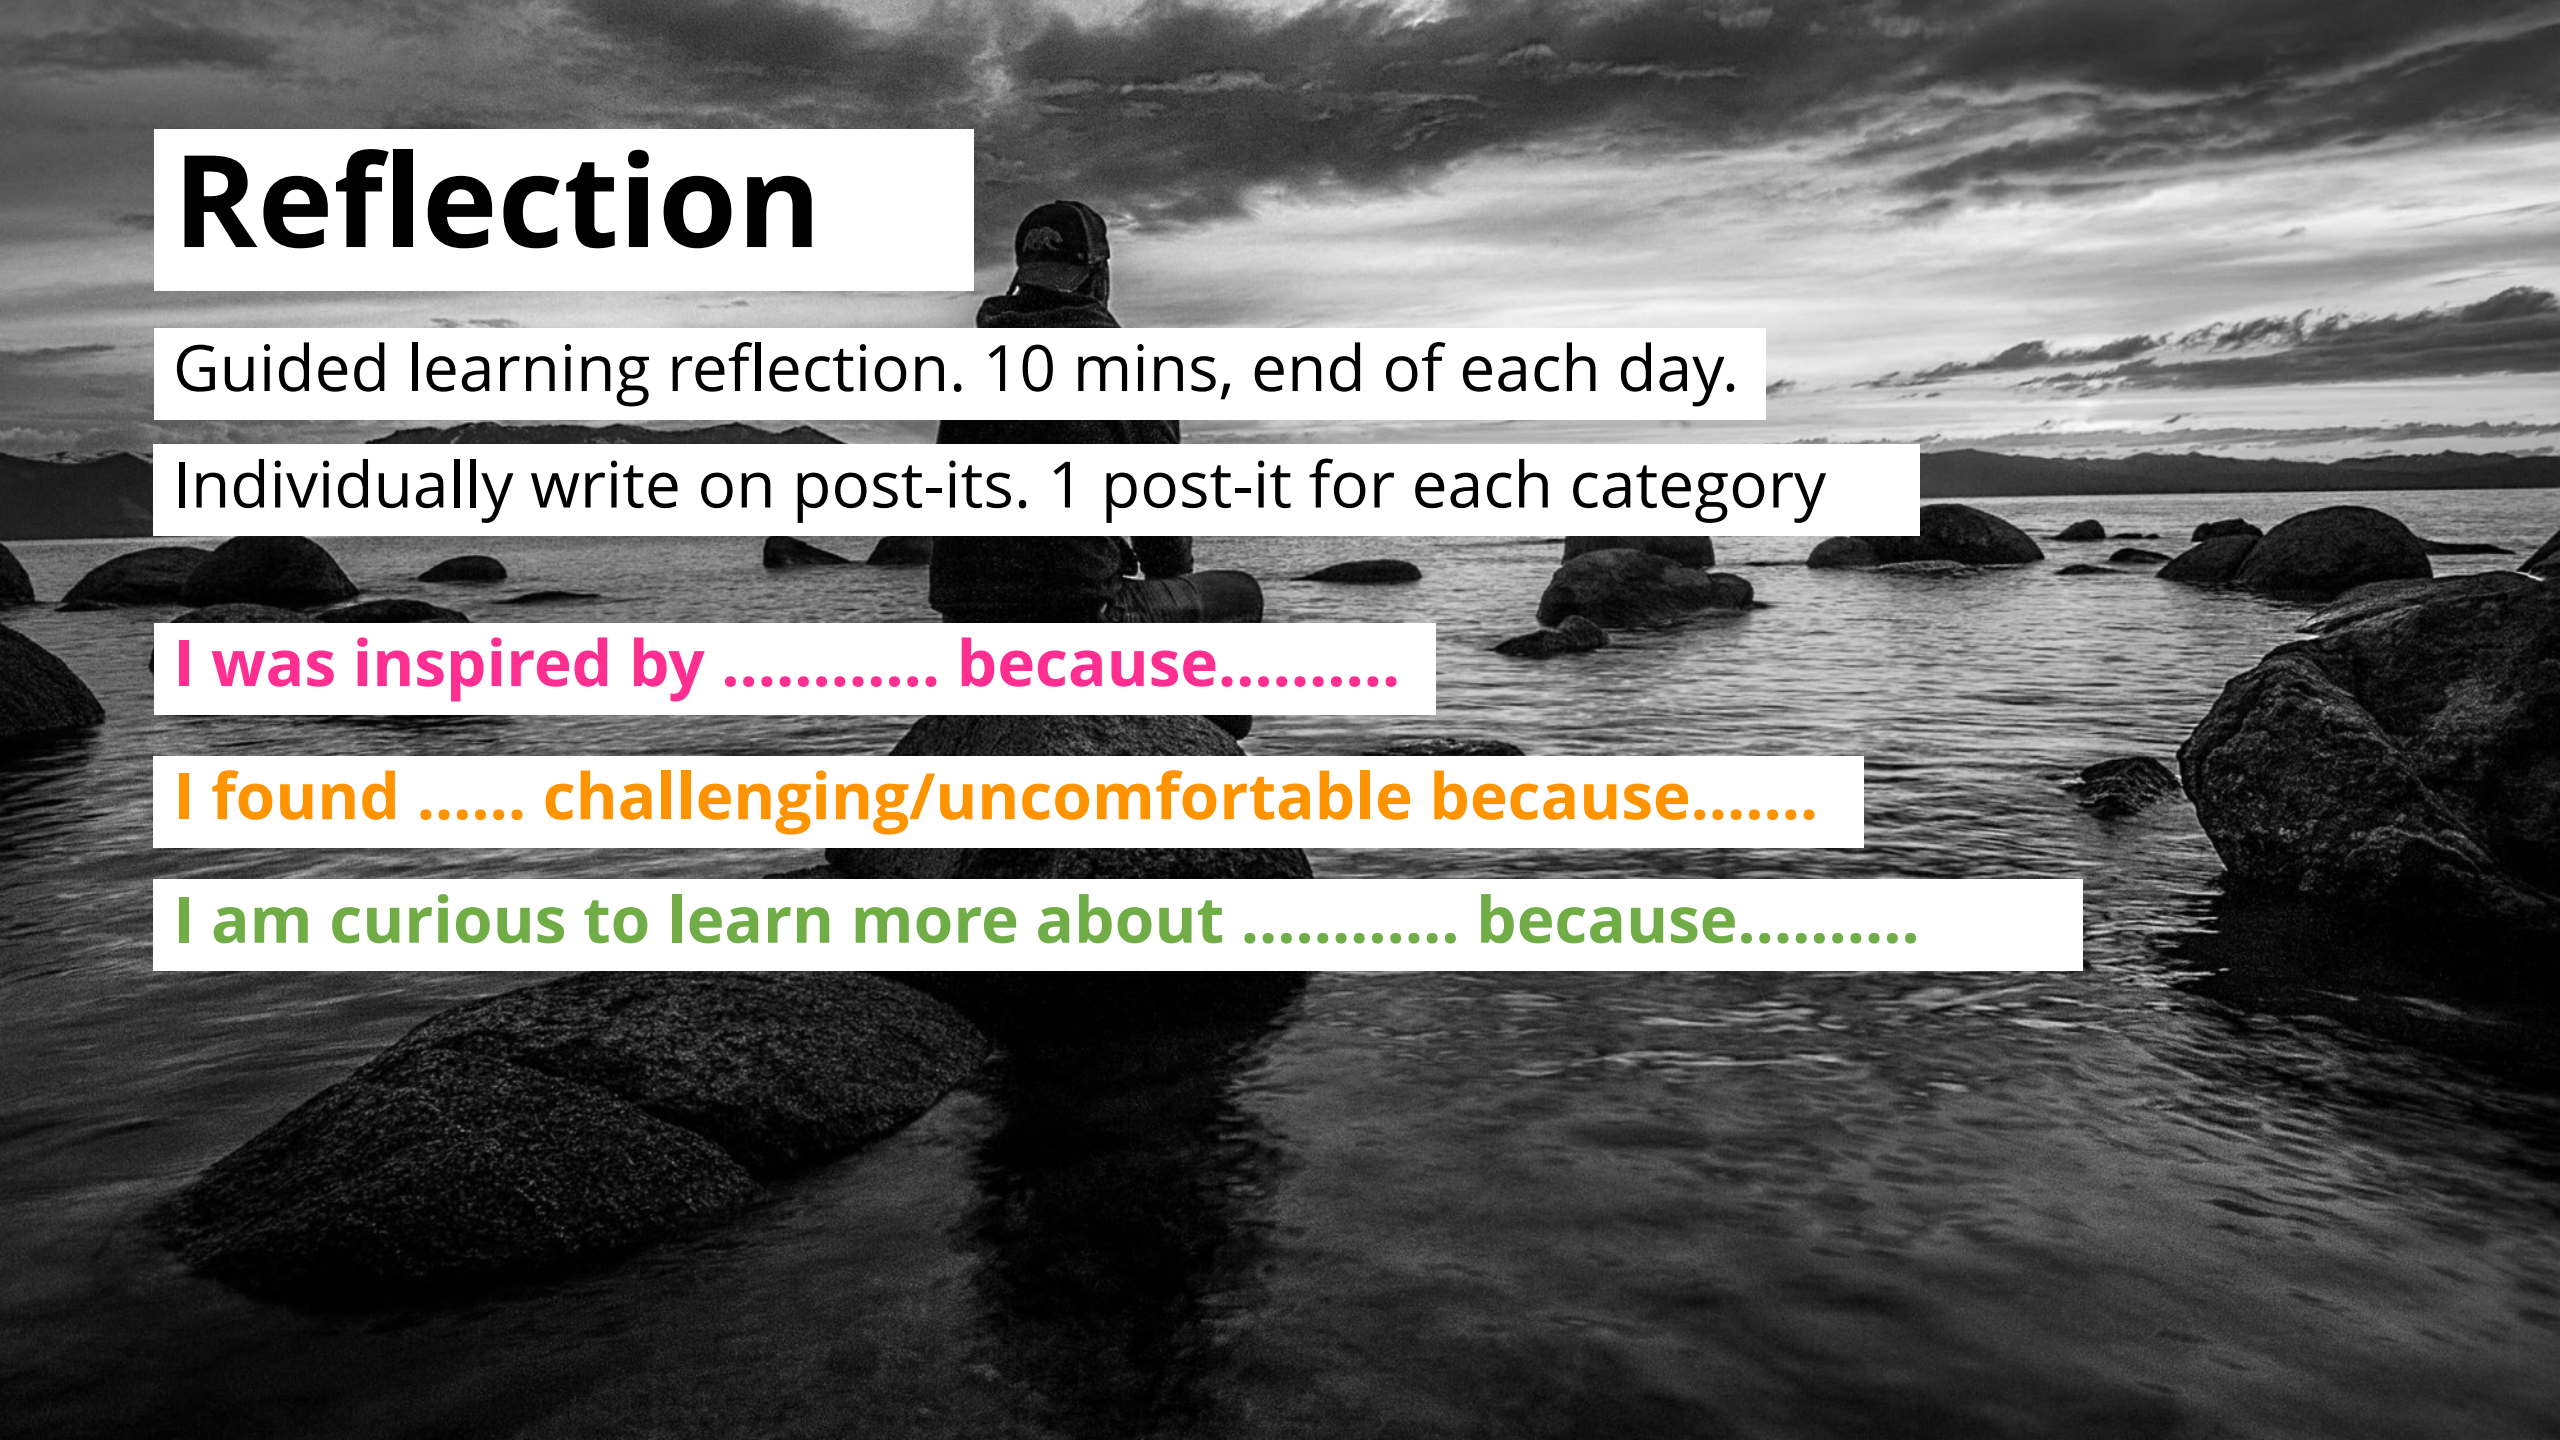
You are designing for 2030. It might not be possible today, but in 7 years. *Consider how much AI has changed/grown in the last 2 years…*

Think big! Orders of magnitude change!
10x better

At 5:00pm.

Present **two ideas** that use HYLIGHT, Random Power or Meta-HiLight (must be different tech)

A **new local opportunity card/problem space** - where you think the tech could be applied…with a few early-stage ideas.



Reflection

Guided learning reflection. 10 mins, end of each day.

Individually write on post-its. 1 post-it for each category

I was inspired by ..... because.....

I found ..... challenging/uncomfortable because.....

I am curious to learn more about ..... because.....
