

INTERFACING ROXIE

MATTHIAS BONORA

**MT-28
International Conference
on Magnet Technology**

Aix-en-Provence, France, 10-15 September 2023

MT-28
International Conference
on Magnet Technology

Aix-en-Provence, France, 10-15 September 2023

Overview

- Interfaces from ROXIE
 - xml, hmo, geometry
 - Interfacing during execution
- Scripting ROXIE
 - Python API, interfacing API
- Working with Systems and Models (MBSE)
 - pyMBSE, MMBSE, developments

MT-28
International Conference
on Magnet Technology
Aix-en-Provence, France, 10-15 September 2023

2023-09-11

Matthias Bonora

Interfaces from ROXIE

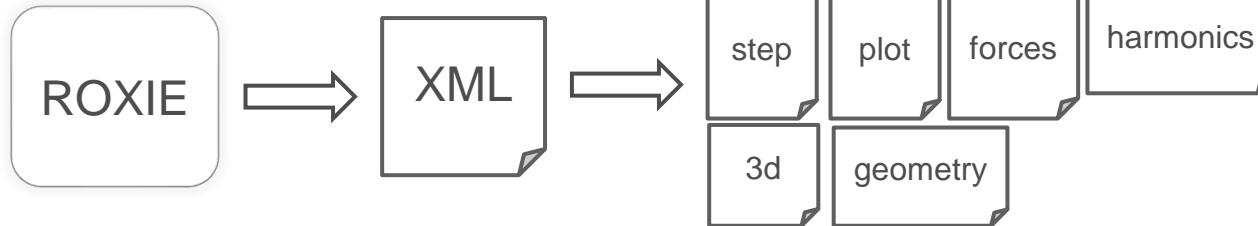

- External mesh input (.hmo)
- Simplify ROXIE output structure
 - ~~.output, .post, .force2D, .map2d, .wrl~~
- -> 2 main outputs
 - .pdf for Report
 - .xml for structured output
 - Contains plots, graphs, geometry, dv, objectives,...

```
1  <?xml version="1.0" encoding="UTF-8"?>
2  <!DOCTYPE roxieData SYSTEM "roxieData.dtd">
3  <roxieData comment="STATIC 14.5kA" version="23.6.0.l
4    <plottingInfos>
5      <pageXsec id="1">
6        <coilPlot id="3" level="1"/>
7        <title colour="black" label="STATIC 14.5kA"/>
8        <axisX visible="true" min="-100.00000" max=":
9        <axisY visible="false" min="-1.0000000000e2">
10       </pageXsec>
11      <pageXsec id="2">
12        <meshPlot id="72" level="1"/>
13        <meshPlot id="34" level="2"/>
14        <matrixPlot id="2" level="3"/>
15        <title colour="black" label="STATIC 14.5kA"/>
16        <axisX visible="true" min="-300.00000" max=":
17        <axisY visible="false" min="-3.0000000000e2">
18       </pageXsec>
19      <pageXsec id="3">
20        <meshPlot id="72" level="1"/>
21        <meshPlot id="32" level="2"/>
22        <title colour="black" label="STATIC 14.5kA"/>
23        <axisX visible="true" min="-300.00000" max=":
24        <axisY visible="false" min="-3.0000000000e2">
25       </pageXsec>
```

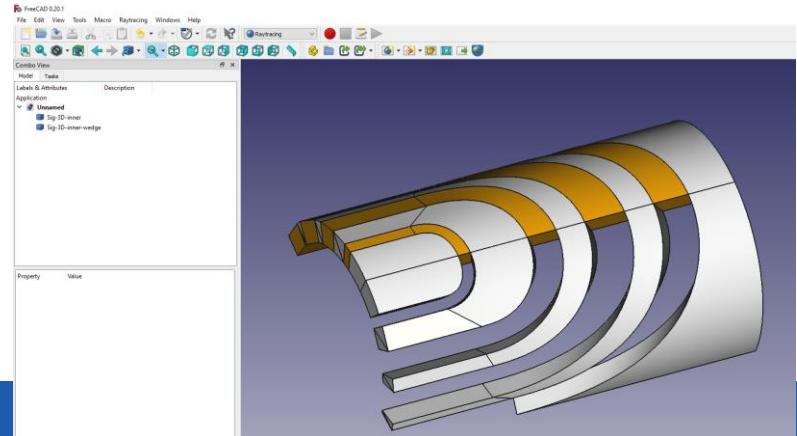

Interfaces from ROXIE

- Extension to specific format via scripts

- Standards for output format

Mathias Bonora

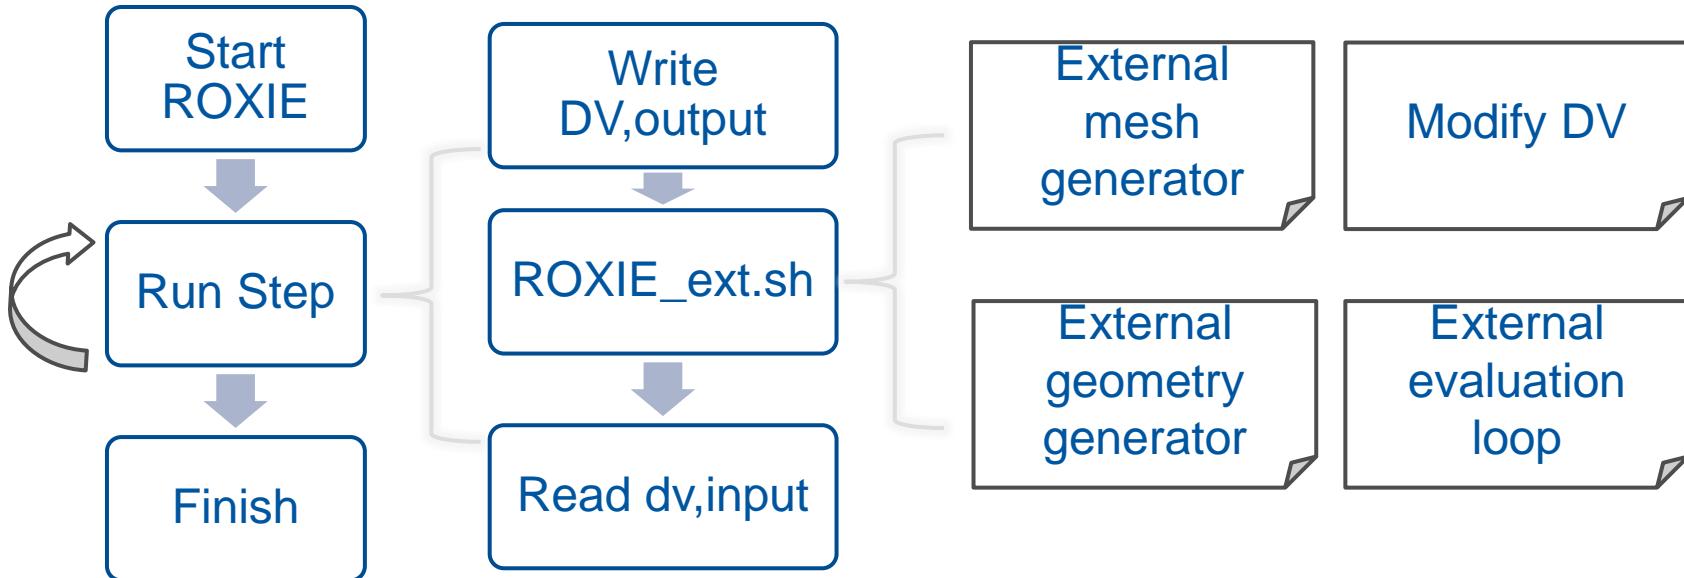

MT-28
International Conference
on Magnet Technology

Aix-en-Provence, France, 10-15 September 2023

2023-09-11

Interfaces from ROXIE

- Interfacing during execution (WIP)

Scripting ROXIE

- Extend ROXIE functionality in Python
- ROXIE-api: interact with ROXIE (execution, xml outputs, plots, input file generation)
- ROXIE-interfaces: generate & transform files to use in ROXIE (.hmo, meshes, geometry)

MT-28
International Conference
on Magnet Technology
Aix-en-Provence, France, 10-15 September 2023

2023-09-11

Matthias Bonora

Scripting ROXIE – ROXIE-api

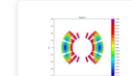

- [Documentation](#)
- Handle .data files
 - Load existing models
 - Transform tables, set flags
 - Generate new data files
- Handle xml output files
 - Plot
 - Extract data
- Execute ROXIE

Example gallery

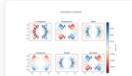

Below is a gallery of examples for using this package

Output parsing and plotting

Examples using the output parsing and plotting functionality

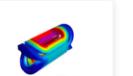

2D Crosssection plots

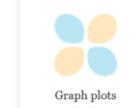

2D Forces plots

Field quality plots

3D plots

Graph plots

Roxie execution

Examples running roxie, and modifying input files

Run roxie on server

Manipulate Datafiles

MT-28
International Conference
on Magnet Technology

Aix-en-Provence, France, 10-15 September 2023

2023-09-11

Matthias Bonora

Scripting ROXIE – input files

- Load existing files
- Operate on tables / flags
- Copy between Files
- Save as new File

Setting up

Load Datafile into RoxieInputBuilder object

```
import pathlib
import tempfile
from roxieapi.input.builder import RoxieInputBuilder

folder = pathlib.Path("../input_files").absolute()
datafile = "dipole_2d.data"

rib = RoxieInputBuilder.from_datafile(folder / datafile)
```

Change flags and metadata

```
rib.comment = "Python modified datafile"
rib.flags["LDEBUG"] = True
rib.flags["LFORCE2D"] = True

rib.flags
```

Check defined Blocks

```
rib.block
```

Update alpha angle of block no 4

```
# Dataframe index 3 corresponds to Block no 4
rib.block.loc[3, "alpha"] = 23.2

rib.block
```

Generate new datafile

```
tmp_dir = pathlib.Path(tempfile.gettempdir())
tmp_file = tmp_dir / "temp.data"
rib.build(str(tmp_file))

with open(tmp_file, "r") as f:
    print(f.read())
```

MT-28
International Conference
on Magnet Technology

2023-09-11

Matthias Bonora

Scripting ROXIE - execution

- Simple Upload / execution
- Return of output log, status
- Download of results
- Run locally (terminal)
- OR remotely via REST
 - Server, Docker

Executing roxie

Set up paths, datafile and execute Roxie as a process

```
import pathlib
from roxieapi.tool_adapter.RoxieToolAdapter import TerminalRoxieToolAdapter

folder = pathlib.Path("../input_files").absolute()
datafile = "dipole_2d.data"

runner = TerminalRoxieToolAdapter(input_file=datafile, input_folder_rel_dir=folder)

result = runner.run()

print(f"Run executed with return code {result}")
```

Check output and errors

```
for line in runner.output_lines:
    print(line)

17 # Executing roxie
18 # -----
19 # Set up paths, datafile and execute Roxie as a process
20 #
21 import pathlib
22 from roxieapi.tool_adapter.RoxieToolAdapter import RestRoxieToolAdapter
23
24 folder = pathlib.Path("../input_files").absolute()
25 datafile = "dipole_2d.data"
26
27 runner = RestRoxieToolAdapter(folder, datafile, "my-model", "localhost", 8080)
28
29 result = runner.run()
30
31 print(f"Run executed with return code {result}")
32
33 Run Cell | Run Above | Debug Cell
34 # Jupyter
35 # -----
36 |
37 for line in runner.output_lines:
38     print(line)
39
```

Linking everything together

pyMBSE, MMBSE, Magnet Exchange

MT-28
International Conference
on Magnet Technology

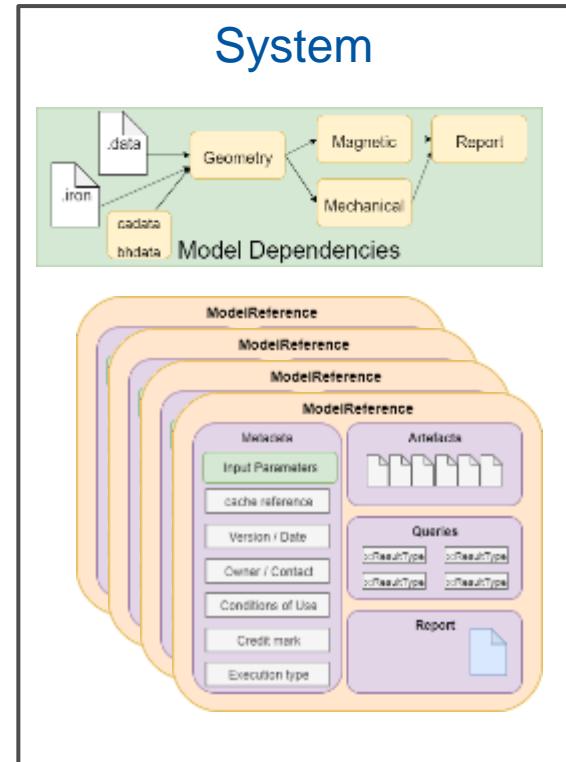

Aix-en-Provence, France, 10-15 September 2023

2023-09-11

Matthias Bonora

Linking everything together - pyMBSE

- So far: Small modules, packages and projects on top of ROXIE
 - R&D of features and extensions
 - Missing Concept of Integration
- → pyMBSE
 - Started in PSI for the CHART/MagNum project
 - Introduce the concept of models, interfaces and model based system engineering to magnet design
 - Define Magnet Models, dependencies, inputs, outputs, Dependency graph
 - Link with Measurements
 - **Integrated Environment**
 - Software
 - Tools
 - Packages

MMBSE

- Store Systems
- Store Inputs
 - Files
 - Dependencies to other Models
 - Parameters
- Store Outputs of execution
 - Version
 - Report
 - Result files
- Access via API (Python)
 - Connect to other System

The screenshot shows a 'Systems' overview page with two entries:

Type	Name	Created at	View
SAMPLE	Building 311 calibration dipole	June 22, 2023, 2:59 p.m.	View
STUDY	SIGRUM	Sept. 4, 2023, 3:02 p.m.	View

The screenshot shows a 'Model Information' page for a '2D iron yoke' model. It includes sections for Model Updates, Model Information (Type: ROXIE, Part of: SIGRUM), Description (2D iron yoke, sparse mesh, with cooling hole), Inputs (roxie.bhdata, roxie.cadata, Sig-2D-Iron.data, Sig-2D-Iron.irn), and Outputs. On the right, a sidebar shows recent updates from Stephan Russenschuck and Jens Kaeske.

Model Updates

- Model created by Stephan Russenschuck 22 hours, 21 minutes ago
- Jens Kaeske added tags • 3D Dipole 6h ago
- Stephan Russenschuck Commented 1h ago Lorem ipsum dolor sit amet, consectetur adipiscing elit. Tincidunt nunc ipsum tempor purus vitae id. Morbi in vestibulum nec varius. Et diam cursus quis sed purus nam. Suspendisse net ellit, non sit ut tincidunt condimentum. Nisl ultrices eu venenatis diam.
