

# 22nd International Symposium on Very High Energy Cosmic Ray Interactions (ISVHECRI 2024)

Contribution ID: 47

Type: **Contributed**

## Outreach Hyper-Kamiokande México

*Thursday 11 July 2024 10:40 (20 minutes)*

Outreach Hyper-Kamiokande Mexico invites you to learn more about the contribution of Mexico in the international collaboration with Japan for the construction of the next big neutrino detector Hyper-Kamiokande, that it will be constructed underground at the Kamioka Mine in Hida City, Gifu Prefecture, Japan.

This conference will function as a pivotal point to highlight the importance of the dissemination of neutrino research in Mexico that Outreach Hyper-Kamiokande plays inside of the nation and the role Mexico contributes to this initiative. With this, we aim to inspire future generations of Mexican science researchers to participate in projects related to elemental particles.

**Primary authors:** MEDINA ESTRADA, Brenda Elisa; TORRES JIMÉNEZ, Judith; BOLIVAR, Maria Fernanda; MONTIEL DÜCKER ROMERO, Montserrat

**Co-authors:** TOMATANISÁNCHEZ, Alejandro Kadsumi (Tecnologico de Monterrey); DE LA FUENTE ACOSTA, Eduardo (Universidad de Guadalajara); FALCÓN MORALES, Luis Eduardo (Tecnológico de Monterrey); Dr BISWAL, Rajesh Roshan (Tecnológico de Monterrey); Dr GARCIA GAMBOA, Rodrigo (Tecnológico de Monterrey); CUEN ROCHIN, Saul (Tecnologico de Monterrey)

**Presenters:** TORRES JIMÉNEZ, Judith; MONTIEL DÜCKER ROMERO, Montserrat

**Session Classification:** Contributed talks
