

Discussion on IPPOG Expansion

In terms of:

- Increased membership
- Core objectives

- *Divide into 4 discussion groups (30 min + 4x5 min)*
 - 1. New members associated to LHC programme**
 - E.g. new CERN member states etc.
 - 2. New labs**
 - e.g. KEK, SLAC, FNAL
 - 3. New disciplines**
 - e.g. astro-particle physics, neutrino physics etc.
 - 4. IPPOG working methodologies**
 - What do we need to do between 6-monthly meetings in order to achieve our core objectives

Aims of these discussion groups

- For groups 1-3
 - What are the benefits of being a member of IPPOG for this group?
 - Prioritize core IPPOG activities for this group
 - What do we expect of these new IPPOG members?
- Group 4
 - Fact: we cannot achieve all of our core activities by meeting twice per year
 - Define how we can work together efficiently between 6-monthly meetings?
