

Digital Mathematics Library in Japan as an Overlay of Digital Repository Systems

Takao Namiki

Department of Mathematics, Hokkaido University, JAPAN

Daisuke Ikeda

Department of Informatics, Kyushu University, JAPAN

Scholarly Communication in Math

- Literature's everything:

S.C. in Math essential to general S.C.

- Small journals matter:
 - Small \Leftrightarrow about 100 articles per a title.

Digital Mathematics Library (DML)

- National Portal(s) on Mathematics
 - proposed by International Math. Union
 - Portals in France, Germany, Russia, India,... are already developed.

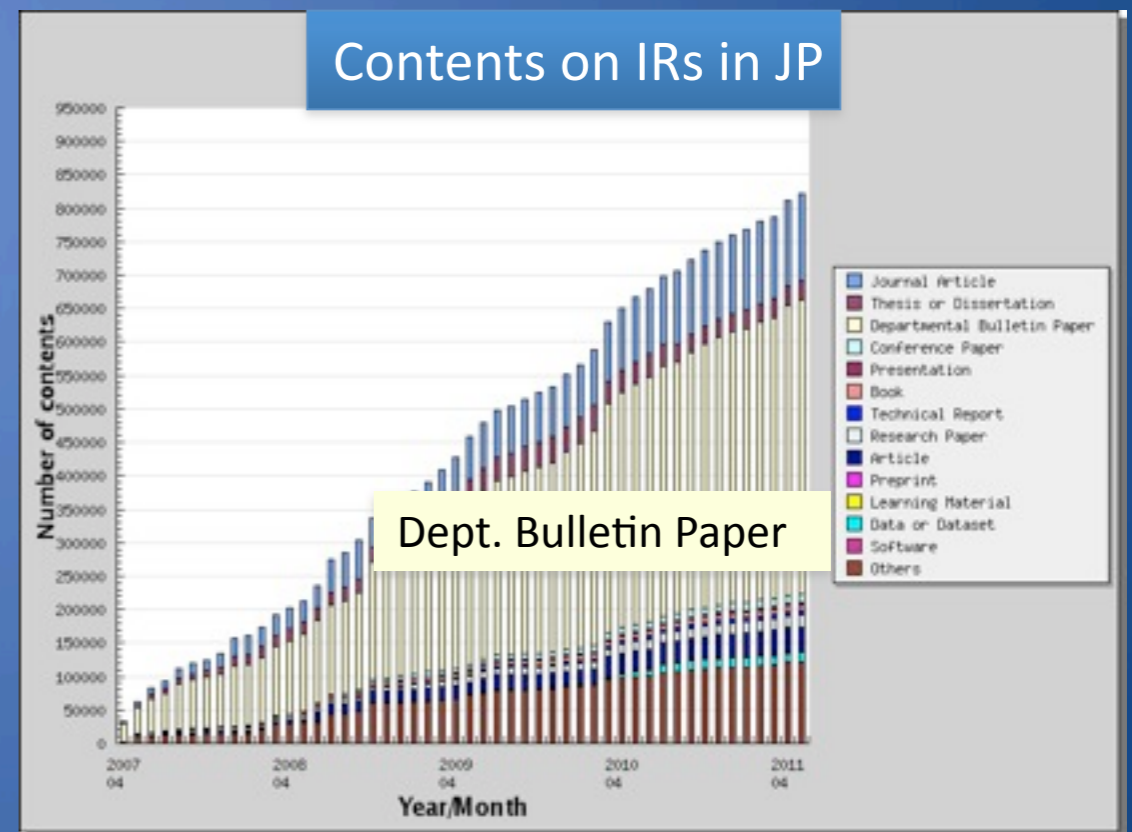

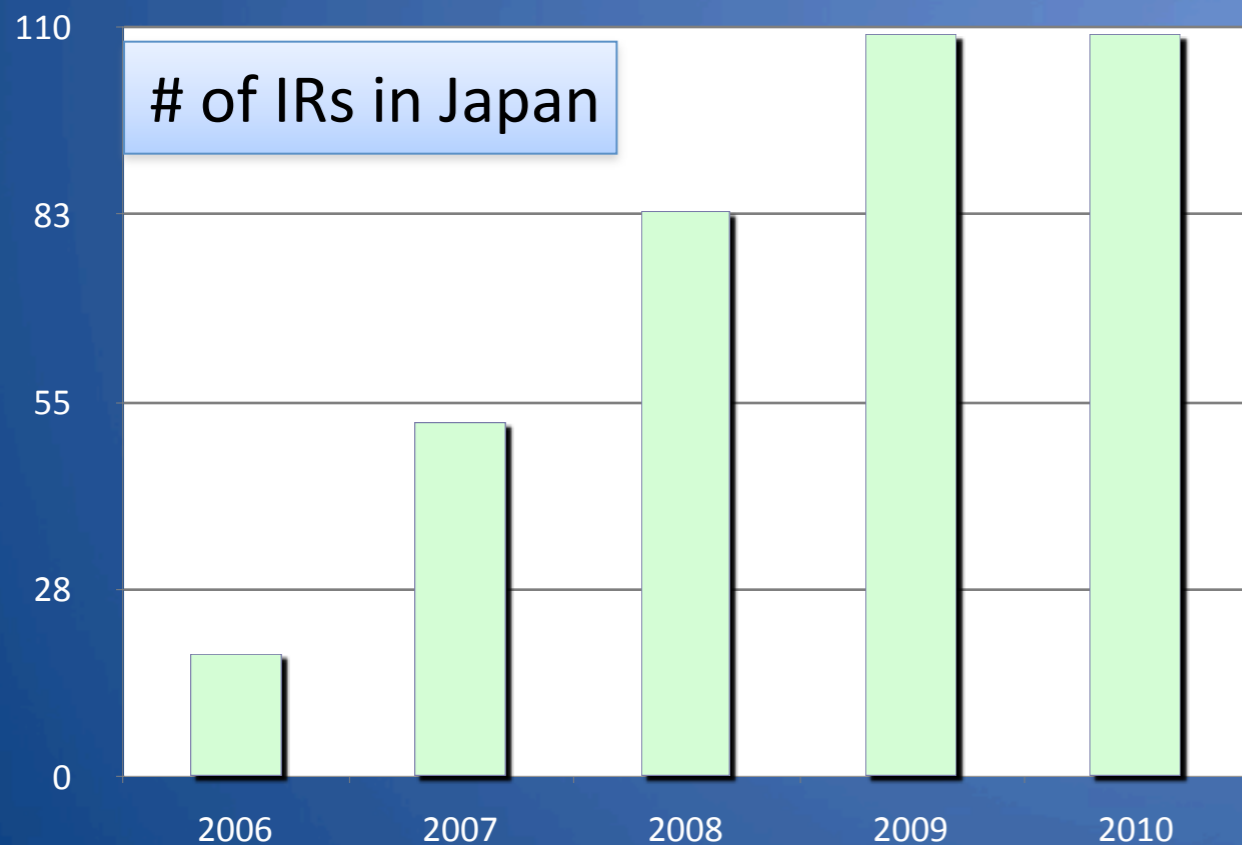

Goal: Construction of DML-JP

Approach to DML-JP

Overlay with institutional repositories in JP

–plus arxiv.org and Project Euclid

- #IRs in Japan is increasing.

- IRs provide platforms for *Dept. Bulletins*.

Some Difficulties

1. Identification

- which PDF files on IRs are mathematical ones.
 - E.g., many dept. bulletins by *Faculty of Science*, including *non-mathematical papers*.
- huge number of journal titles but nobody knows the list of full titles.

2. Poor metadata

- metadata on IRs is insufficient from viewpoints of mathematics.

Solution

1. Identification: Matching with *MR number on MathSciNet*

– *MathSciNet*: online version Math. Reviews
+ *reviews written by experts*

– *Math. Reviews*: top tier journal by AMS

- 200 titles and 70,000 articles indexed as Japanese ones.

2. Poor Metadata: Reviews in MathSciNet

IR Author: Maeda, Masao

IR Title: The four-or-more Vertex Theorems...

IR Official URL: <http://hdl.handle.net/10131/1069>

MR MSC Primary: 53A35, 53A, 53

MR Math. Reviews ID: 1710269

In-Depth of DML-JP

<http://sparc1.math.sci.hokudai.ac.jp/dmljp/>

DML-JP

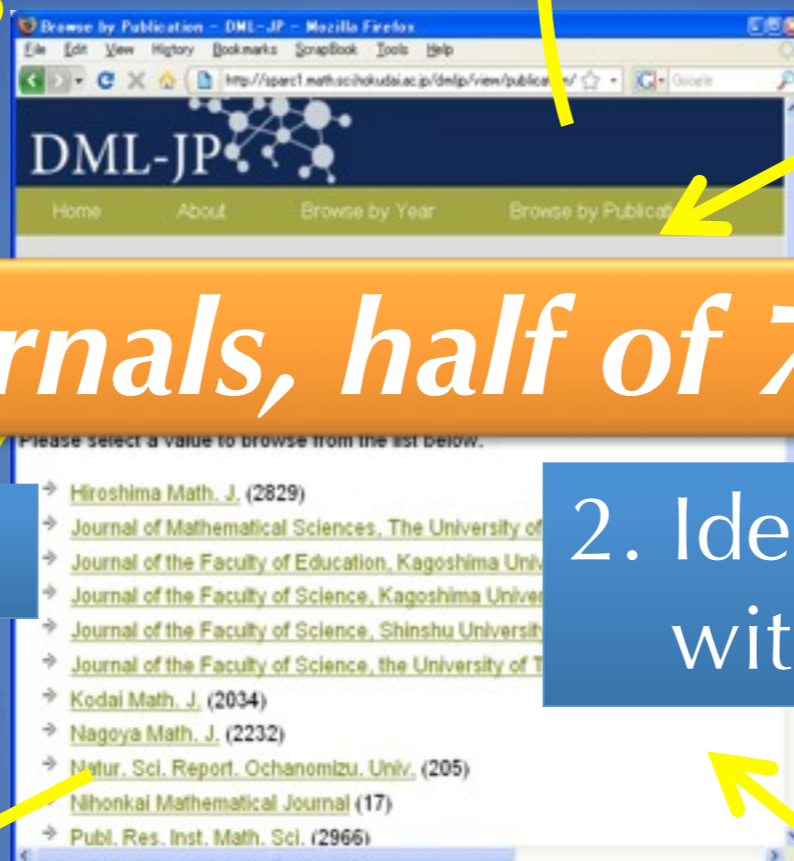

3. Merging metadata

68 of 200 journals, half of 70,000 articles

1. Metadata Harvesting

2. Identifying Papers on IRs with MR number

4. SWORD and OAI-ORE

40 Institutional Repositories

Math. Reviews/MathSciNet
2,000,000+ reviews

Conclusion

- DML-JP is a *disciplinary repository* cooperating with *institutional repositories*.
 - *Institution*: digitization and providing accesses
 - *Community*: feedback high quality metadata and lead readers to institutions

Future Work

- DML-JP requires new fields for IRs
 - adding new field(s) means *new schema* of DBs behind repository systems.

Future work: Flexible repository systems
