Everything!

Elementary Particles

Not one series, but three!

I II III

quarks

u

c

t

(1976)

(1995)

d

s

b

(1947)

(1978)

leptons

e

μ

τ

(1895)

(1936)

(1973)

ν_e

ν_μ

ν_τ

(1956)

(1963)

(2000)

Elementary Particles

Generation:

I II III Charge

quarks

u (1976)	c (1976)	t (1995)	+2/3 e
d (1947)	s (1947)	b (1978)	-1/3 e

leptons

e (1895)	\square (1936)	τ (1973)	-1 e
ν_e (1956)	ν_{\square} (1963)	ν_{τ} (2000)	0 e

Matter

Is this all?

Generation:

	I	II	III	<u>Charge</u>
quarks	u (1976)	c (1976)	t (1995)	+2/3 e
	d (1947)	s (1947)	b (1978)	-1/3 e
leptons	e (1895)	\square (1936)	τ (1973)	-1 e
	ν_e (1956)	ν_{\square} (1963)	ν_{τ} (2000)	0 e

Matter

Anti-matter

Revolutions previous century:

- Theory of relativity
- Quantum Mechanics

Paul Dirac (1928): relativistic quantum theory!

For each matter particle there is an anti-matter particle

Anti-matter particles:

- Same mass
- Opposite charge

Elementary particles

	I	II	III	<u>Charge</u>
quarks	u (1976)	c (1976)	t (1995)	$+2/3 e$
	d	s (1947)	b (1978)	$-1/3 e$
leptons	e (1895)	\square (1936)	τ (1973)	$-1 e$
	ν_e (1956)	ν_{\square} (1963)	ν_{τ} (2000)	$0 e$

Matter

Elementary particles

quarks

	I	II	III	<u>Charge</u>
	u	c <i>(1976)</i>	t <i>(1995)</i>	$+2/3 e$

$+1/3 e$	\bar{d}	\bar{s}	\bar{b}
$+1 e$	\bar{e}	\square	$\bar{\tau}$
$0 e$	$\bar{\nu}_e$	$\bar{\nu}_{\square}$	$\bar{\nu}_{\tau}$

Anti-matter

How do you make anti-matter??

Albert Einstein:
 $E=mc^2$

matter + antimatter = light !
(and vice versa)

Anti-matter in hospitals: the PET-scan

What is yet unknown:

I. What is yet unknown? "Anti-matter"

Where did the anti-matter go?

No anti-matter with satellites

No anti-matter galaxies

II. What is yet unknown? “Higgs”

Mass of particles

(Partially answered on July 4, 2012 !)

Curious prediction:

The Higgs boson:

ensures that particles have mass
in the theory

Neutrino's

- Electron
- Muon
- Tau

up,down, strange

● charm

Top quark

● bottom

III. What is yet unknown? "Dark matter"

Temperature fluctuations

Rotation-curves

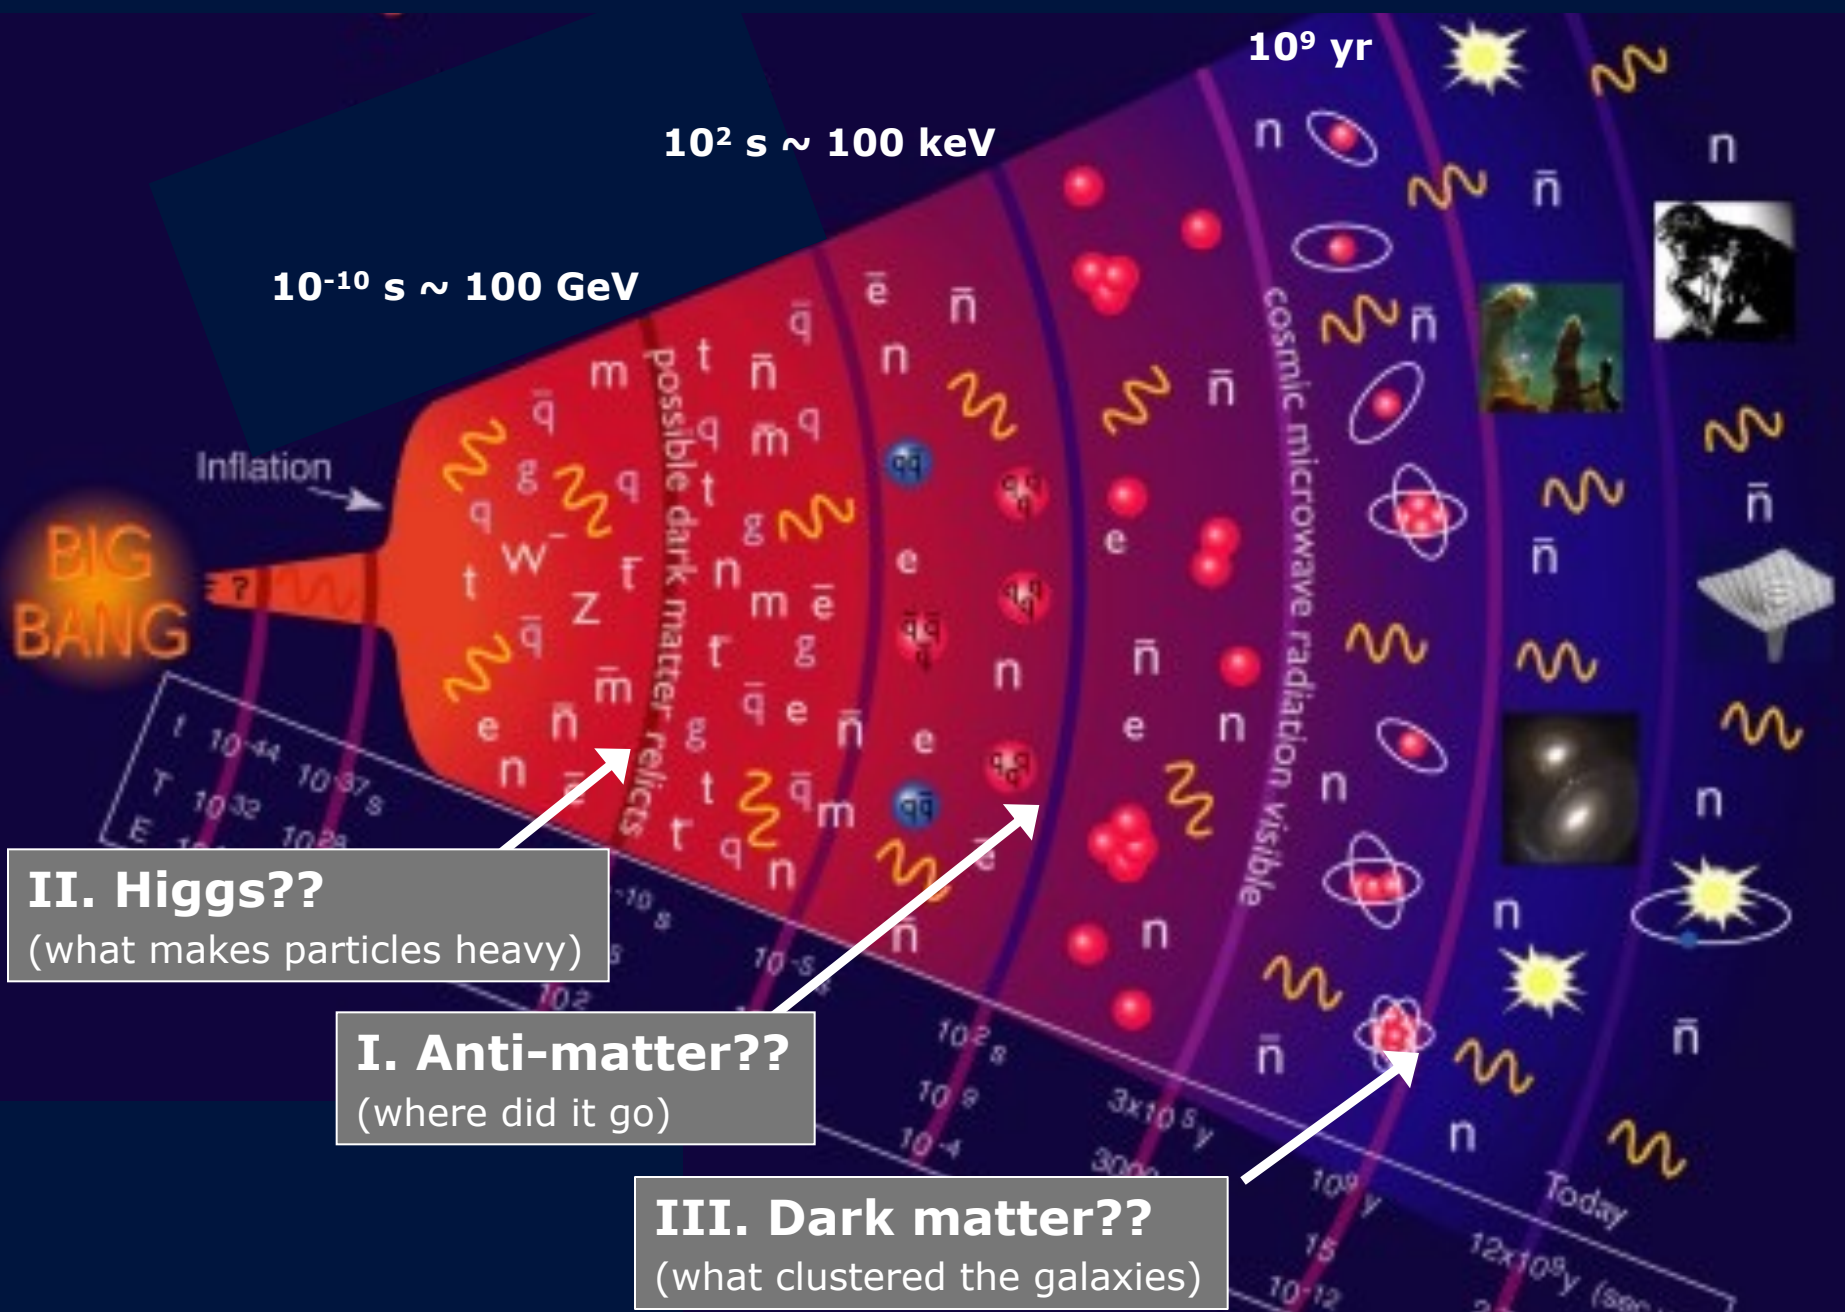

Gravitational lens

What is dark matter?

We only studied 4% of the content of the Universe...!

What is yet unknown? Three Big Questions

II. Higgs??
(what makes particles heavy)

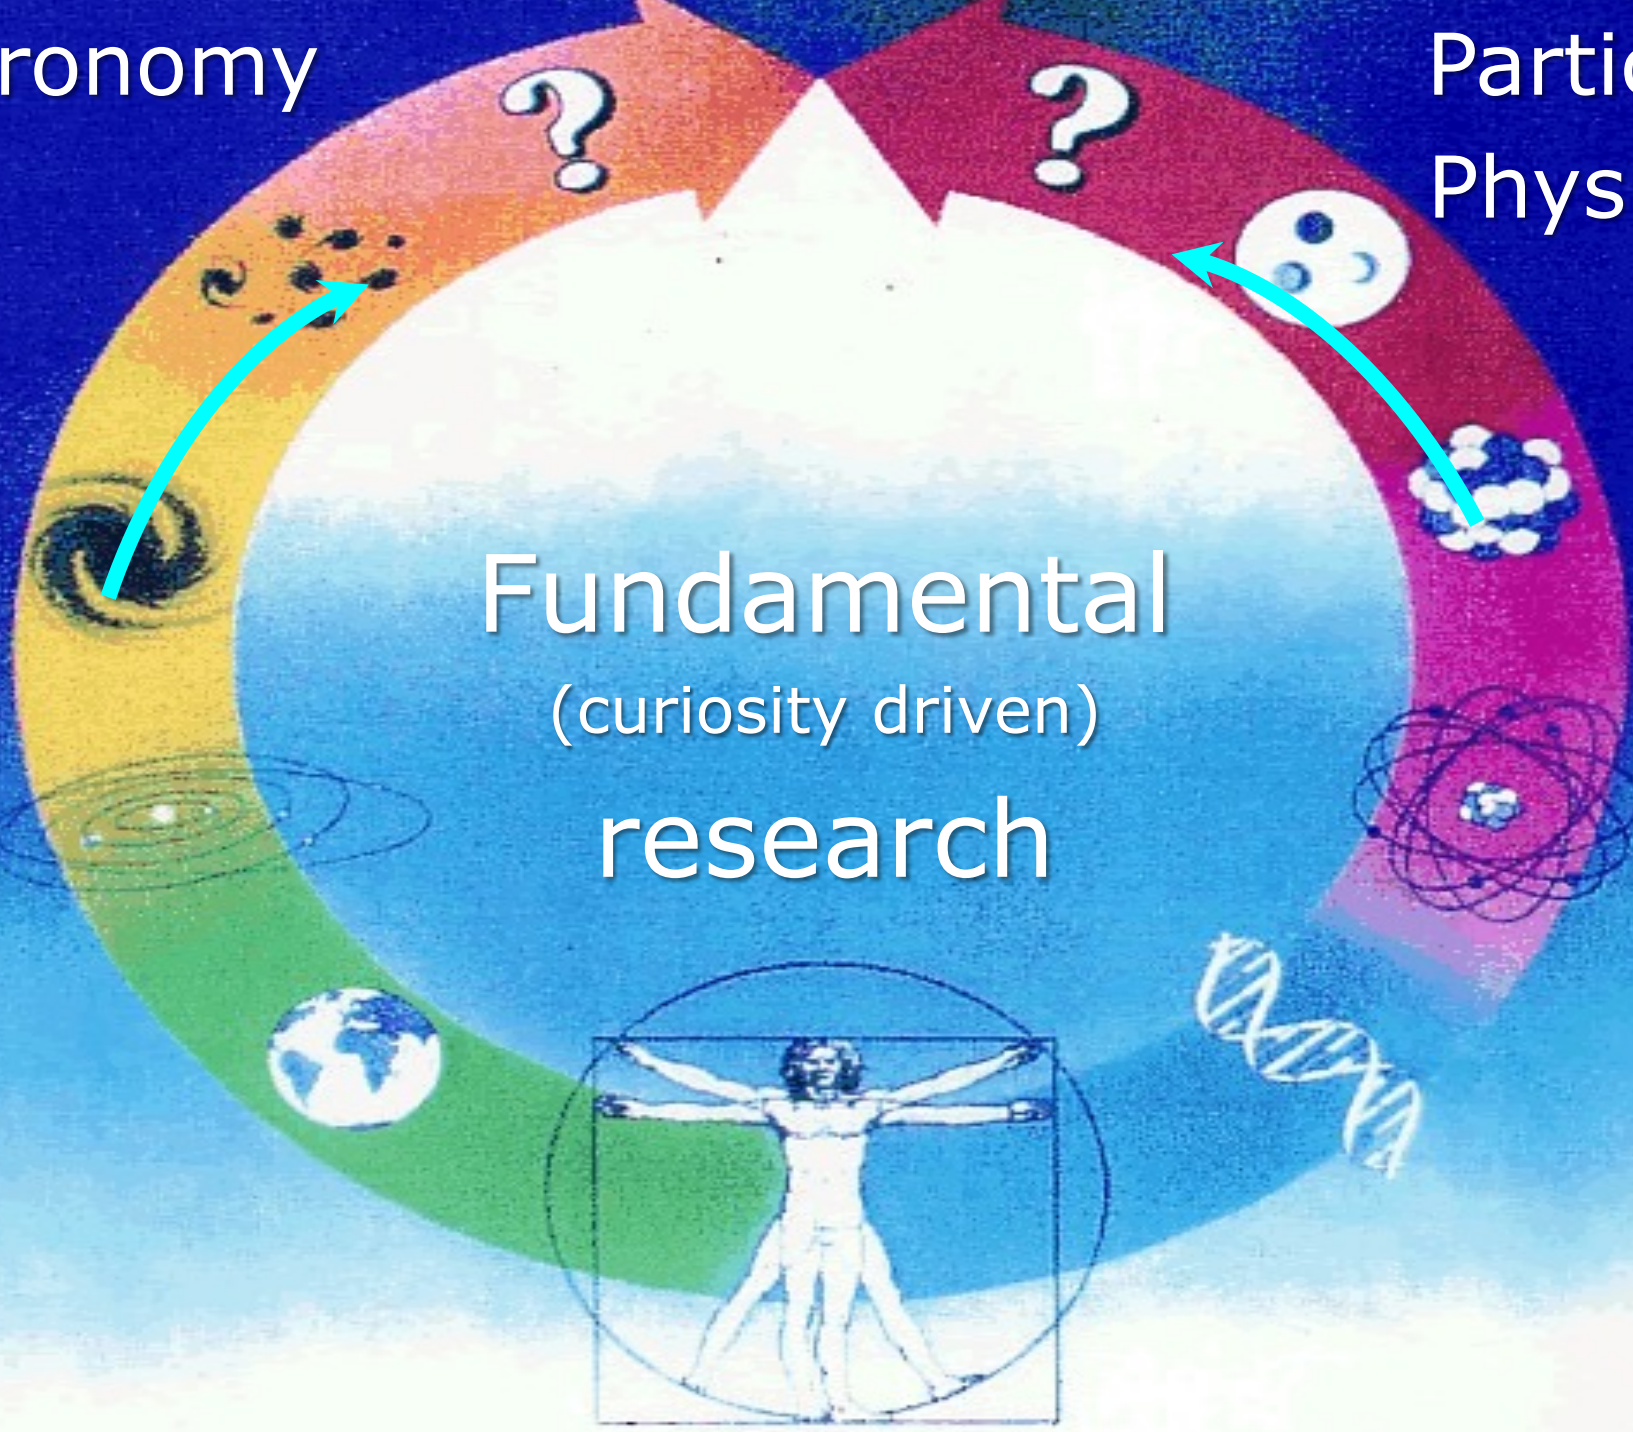

I. Anti-matter??
(where did it go)

III. Dark matter??
(what clustered the galaxies)

Astronomy

What is mass ?? Anno 1687

Mass is de 'exchange rate' between force and acceleration:

$$F = m \times a$$

Does not describe what mass **is** ...

Newton

What is mass ?? Anno 1905

Mass is energy

$$E = m \times c^2$$

Describes what mass *is* !

But not where it comes from ...

Einstein

13. *Ist die Trägheit eines Körpers von seinem Energieinhalt abhängig?*
von A. Einstein.

Die Resultate einer jüngst in diesen Annalen von mir publizierten elektrodynamischen Untersuchung¹⁾ führen zu einer sehr interessanten Folgerung, die hier abgeleitet werden soll. Ich legte dort die Maxwell-Hertz'schen Gleichungen für den leeren Raum nebst dem Maxwell'schen Ausdruck für die elektromagnetische Energie des Raumes zugrunde und außerdem das Prinzip:

Die Gesetze, nach denen sich die Zustände der physikalischen Systeme ändern, sind unabhängig davon, auf welches von zwei relativ zueinander in gleichförmiger Parallel-Translationsbewegung befindlichen Koordinatensystemen diese Zustandsänderungen bezogen werden (Relativitätsprinzip).

Gestützt auf diese Grundlagen²⁾ leitete ich unter anderem das nachfolgende Resultat ab (l. c. § 8):

Ein System von ebenen Lichtwellen besitze, auf das Koordinatensystem (x, y, z) bezogen, die Energie l ; die Strahlrichtung (Wellennormale) bilde den Winkel φ mit der x -Achse des Systems. Führt man ein neues, gegen das System (x, y, z) in gleichförmiger Paralleltranslation begriffenes Koordinatensystem (ξ, η, ζ) ein, dessen Ursprung sich mit der Geschwindigkeit v längs der x -Achse bewegt, so besitzt die genannte Lichtmenge — im System (ξ, η, ζ) gemessen — die Energie:

$$l' = l \frac{1 - \frac{v}{V} \cos \varphi}{\sqrt{1 - \left(\frac{v}{V}\right)^2}}$$

wobei V die Lichtgeschwindigkeit bedeutet. Von diesem Resultat machen wir im folgenden Gebrauch.

1) A. Einstein, Ann. d. Phys. 17. p. 891. 1905.

2) Das dort benutzte Prinzip der Konstanz der Lichtgeschwindigkeit ist natürlich in den Maxwell'schen Gleichungen enthalten.

What is mass ?? Anno 1964

Mass of elementary particles is due to
 “friction” of ubiquitous ‘Higgs field’

$$m: \psi\psi H$$

Higgs

BROKEN SYMMETRIES, MASSLESS PARTICLES AND GAUGE FIELDS
 D. M. HIGGS
 X-31 Institute of Mathematical Sciences, University of Edinburgh, Edinburgh, Scotland
 Received 21 July 1964

Recently a number of people have discussed the Goldstone theorem [1, 2]. This says that any solution of a Lorentz-invariant theory which violates an internal symmetry equation of that theory must contain a massless scalar particle. Kim and Lee [3] showed that this theorem does not necessarily apply to non-relativistic theories and argued that their considerations would apply equally well to Lorentz-invariant field theories. Gilbert [4], however, gave a proof that the failure of the Goldstone theorem in the non-relativistic case is of a type which cannot hold when Lorentz invariance is imposed on a theory. The purpose of this note is to show that Gilbert's argument falls for an important class of field theories, that in which the conserved currents are coupled to gauge fields.

Following the procedure used by Utiyama [5], let us consider a theory of two fermionic scalar fields

VOLUME 11, NUMBER 3 **PHYSICS LETTERS** **11 September 1964**

$\psi_1(x), \psi_2(x)$ which is invariant under the phase transformation

$$\psi_1 \rightarrow \psi_1 \cos \alpha + \psi_2 \sin \alpha \quad (1)$$

$$\psi_2 \rightarrow -\psi_1 \sin \alpha + \psi_2 \cos \alpha \quad (2)$$

Then there is a conserved current j_μ such that

$$\partial_\mu j^\mu = 0 \quad (3)$$

We assume that the Lagrangian is such that symmetry is broken by the spontaneous of the vacuum expectation value of ψ_2 . Goldstone's theorem is proved by showing that the Fourier transform of $\langle 0 | j_\mu(x) | 0 \rangle$ contains a term

$$\epsilon^{-1} \delta^4(k) \delta_{\mu\nu} \delta_{\alpha\beta} \quad (4)$$

as a consequence of Lorentz invariance, the conservation law and eq. (3).

Kim and Lee [3] avoided this result in the non-relativistic case by showing that the more general form of the Fourier transform is now, in Gilbert's case,

$$F(k) = \delta^4(k) \delta_{\mu\nu} \delta_{\alpha\beta} + \epsilon^{-1} C_{\mu\nu} \delta_{\alpha\beta}^2 \quad (5)$$

where $\epsilon_{\mu\nu}$ which may be taken as 1, 0, 0, 0, [6] picks out a special Lorentz frame. The conservation law then reduces eq. (3) to the less general

instead in order to define a radiation gauge to which the vector gauge fields are well defined operators. Such theories are nevertheless Lorentz-invariant, as has been shown by Schwinger [7]. (This has, of course, long been known of the singular such theory, quantum electrodynamics.) There seems to be no reason why the vector $\epsilon_{\mu\nu}$ should not appear in the Fourier transform under consideration.

It is characteristic of gauge theories that the conservation laws hold in the strong sense, as a consequence of field equations of the form

$$\partial_\mu j^\mu = 0 \quad (6)$$

$$F_{\mu\nu} = \partial_\mu A_\nu - \partial_\nu A_\mu \quad (7)$$

Except in the case of Abelian gauge theories, the fields $A_\mu, F_{\mu\nu}$ are not simply the gauge field variables. $F_{\mu\nu}$ has certain nonlinear terms with coefficients of the structure constants of the group as functions. Now the structure of the Fourier transform of $\langle 0 | j_\mu(x) | 0 \rangle$ must be given by eq. (5). Applying eq. (6) to this commutator given as the Fourier transform of $\langle 0 | j_\mu(x) | 0 \rangle$ [8] the single term $\langle 0 | j_\mu(x) | 0 \rangle$ must be zero. We note that excluded both Goldstone's zero-mass bosons and the

Observation of a New Particle in the Search for the Standard Model Higgs Boson with the ATLAS Detector at the LHC

The ATLAS Collaboration

This paper is dedicated to the memory of our ATLAS colleagues who did not live to see the full impact and significance of their contributions to the experiment.

Abstract

A search for the Standard Model Higgs boson in proton-proton collisions with the ATLAS detector at the LHC is presented. The datasets used correspond to integrated luminosities of approximately 4.8 fb^{-1} collected at $\sqrt{s} = 7 \text{ TeV}$ in 2011 and 5.8 fb^{-1} at $\sqrt{s} = 8 \text{ TeV}$ in 2012. Individual searches in the channels $H \rightarrow ZZ^{(0)} \rightarrow 4\ell$, $H \rightarrow \gamma\gamma$ and $H \rightarrow WW^{(0)} \rightarrow \ell\nu\ell\nu$ in the 8 TeV data are combined with previously published results of searches for $H \rightarrow ZZ^{(0)}$, $WW^{(0)}$, $b\bar{b}$ and $\tau^+\tau^-$ in the 7 TeV data and results from improved analyses of the $H \rightarrow ZZ^{(0)} \rightarrow 4\ell$ and $H \rightarrow \gamma\gamma$ channels in the 7 TeV data. Clear evidence for the production of a neutral boson with a measured mass of $126.0 \pm 0.4 (\text{stat}) \pm 0.4 (\text{sys}) \text{ GeV}$ is presented. This observation, which has a significance of 5.9 standard deviations, corresponding to a background fluctuation probability of 1.7×10^{-4} , is compatible with the production and decay of the Standard Model Higgs boson.

+ Higgs

Higgs and LHCb?

m: $\psi\psi H$

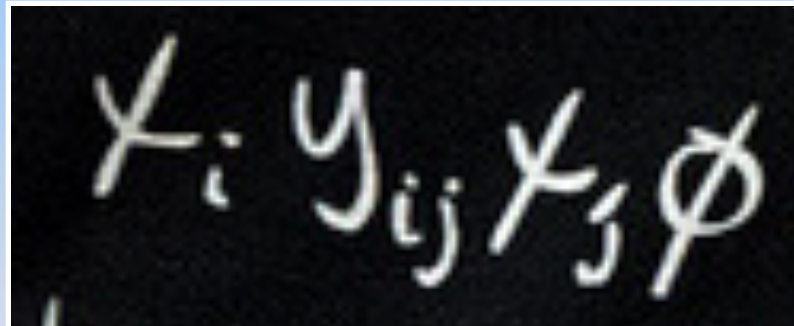

$$\mathcal{L} = -\frac{1}{4} F_{\mu\nu} F^{\mu\nu} + i\bar{\psi}\not{D}\psi + h.c. + \chi_i y_{ij} \chi_j \phi + h.c. + |D_\mu \phi|^2 - V(\phi)$$

Higgs and LHCb?

Ψ : quarks

Y_{ij} : coupling between quarks i, j

$$\mathcal{L} = -\frac{1}{4} F_{\mu\nu} F^{\mu\nu} + i\bar{\Psi} \not{D} \Psi + h.c. + \Psi_i Y_{ij} \Psi_j \phi + h.c. + |D_\mu \phi|^2 - V(\phi)$$

Higgs and LHCb?

Ψ : quarks

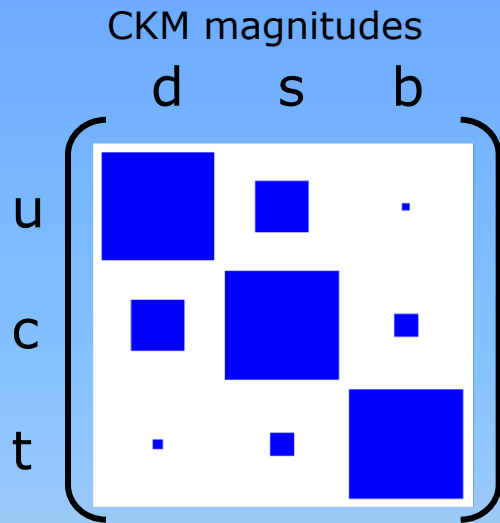

Y_{ij} : coupling between quarks i, j

$\chi_i, y_{ij}, \chi_j, \phi$

Higgs and LHCb?

Why the ranking in quark couplings?

Why the ranking in quark masses?

→ **Is there a connection?**

A few 'small' things:

1

Where did the anti-matter go?

2

80% of all matter in the Universe is unknown
→ dark matter

3

Higgs boson and quark couplings?
(what is the connection) ?

- why does gravity not fit in SM, extra dimensions, why 3 families, fermions fundamental particles, supersymmetry, protons stable, quantisation electric charge, exploding quantum corrections, small neutrino masses, string theory, ...

Einde

Higgs and the Universe

Higgs: Particle? Field?

Particle

Photon (light particle)

Field

Electrical field

Why is the Higgs particle so special?

Particle

Field

As if the fish discovered the water he's in...

The Higgs field – can you see it?

The Higgs field is uniform – like the lake in this picture

Making a Higgs particle is like a ripple on the water

Theory of Higgs:

if the field exists, also
the particle exist

What is mass ?? Anno 1964

Mass of elementary particles is due to
"friction" of ubiquitous 'Higgs field'

$$m: \psi\psi H$$

$$\mathcal{L} = y_{ij} \psi_j \phi$$

What is mass?

Mass of elementary particles is due to
“friction” of ubiquitous ‘Higgs field’

Einstein:

proton mass =
binding energy

Elementary particle
in empty space:
no rest-energy=
no mass

Elementary particle
in Higgs field:
rest energy =
interaction with Higgs field
= mass!

Revolutionary – with spectacular consequences :
space is *not* empty, but filled with sort of ‘ether’

If the Mars
pathfinder finds
life ...

... 1000 new
questions arise

Higgs' properties as expected?

$m_h = 125 \text{ GeV}$

prediction

Standard Model

measurement

Higgs' properties as expected?

Are there more Higgs particles?

$$\begin{aligned}\mathcal{L}_{\text{susy}} = & -\frac{g^2}{8} (H_u^\dagger \sigma^a H_u + H_d^\dagger \sigma^a H_d)^2 - \frac{g'^2}{8} (H_u^\dagger H_u - H_d^\dagger H_d)^2 \\ & + \lambda_{ij}^u H_u^T \epsilon \bar{u}_i q_j - \lambda_{ij}^d H_d^T \epsilon \bar{d}_i q_j - \lambda_{ij}^e H_e^T \epsilon \bar{e}_i \ell_j \\ & - \frac{H_u^\dagger}{\sqrt{2}} (g \sigma^a \bar{W}^a + g' \bar{B}) \bar{H}_u - \frac{H_d^\dagger}{\sqrt{2}} (g \sigma^a \bar{W}^a - g' \bar{B}) \bar{H}_d + \text{h.c.}\end{aligned}$$

One step further...

Another field: the Big Bang

One of Higgs' properties match that of another field...

The *inflaton* that inflated the Universe between 10^{-33} and 10^{-32} seconds after the Big Bang

Another field: the Big Bang

Higgs:

1

Higgs particle discovered in Geneva

2

Universe filled with the Higgs field

3

Higgs properties as expected?

A few 'small' things:

4

Where did the anti-matter go?

5

80% of all matter in the Universe is unknown
→ dark matter

6

Higgs boson and quark couplings?
(what is the connection) ?

- why does gravity not fit in SM, extra dimensions, why 3 families, fermions fundamental particles, supersymmetry, protons stable, quantisation electric charge, exploding quantum corrections, small neutrino masses, string theory, ...

EINDE

What is the purpose of this research?

Fundamental research

- Leads to surprises,
 - Sometimes even useful...
 - But always unknown

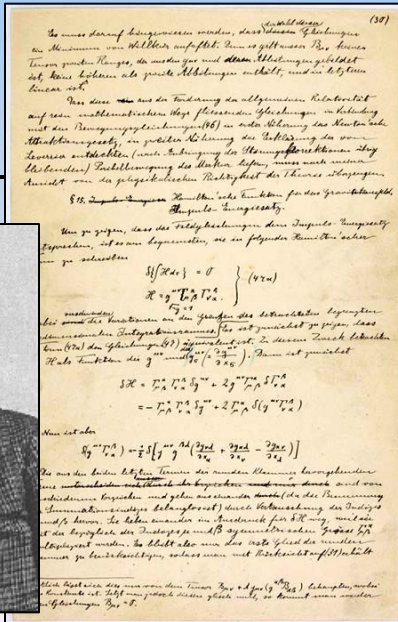

"Infinite amount of applied research on candles, would never have brought us electric light."

What is the purpose of this research?

Fundamental research

- Leads to surprises,
- Sometimes even useful...
- But always unknown

"Without theory of relativity, GPS would be wrong by 10km/day !"

What is the purpose of this research?

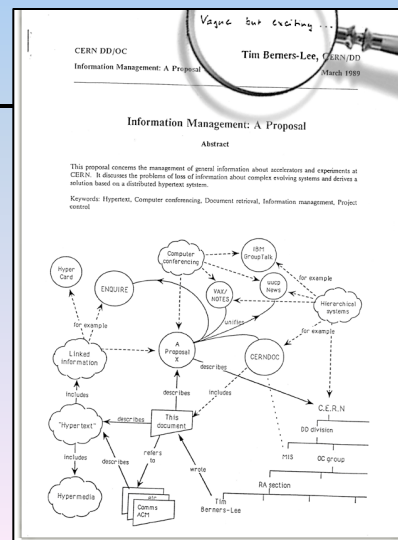

Fundamental research

– Brings useful spin-off

- Medical applications
- Internet
- Educating researchers for society (Philips, ASML, etc, etc)

LHCb: Upgrade - Trigger

- Precise → More luminosity

1) More luminosity → ~~Higher trigger rate~~

2) More luminosity → Higher threshold

- ~~Higher threshold → Less events ...~~

Solution:

Smarter trigger → *all* events to CPU farm:

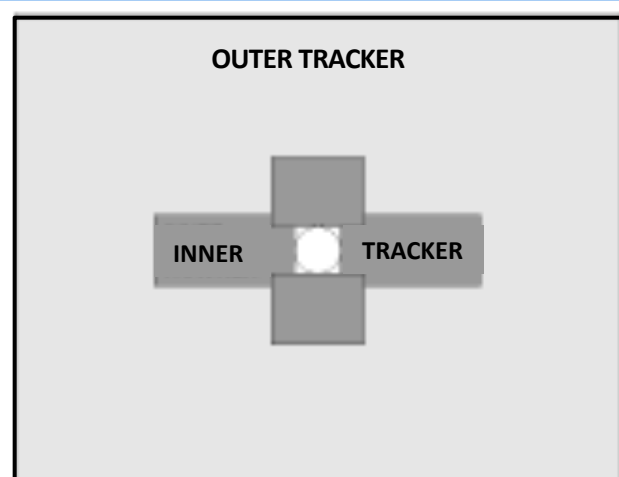

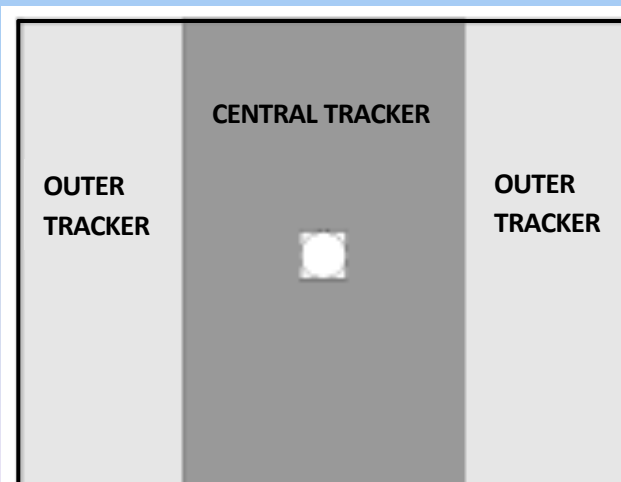

➤ **Readout @40 MHz, not 1 MHz ...**

LHCb: Upgrade - Detectors

- Precise → More luminosity
- More luminosity → Higher particle rate
- Higher particle rate → **Occupancy too large** in Outer Tracker

➤ 2 options:

1) Inner Tracker becomes Scintil. Fiber,
Outer Tracker becomes less

2) Inner Tracker becomes bigger,
Outer Tracker becomes smaller
