

AtFast3: Fast Simulation in ATLAS for LHC Run 3 and beyond

ACAT 2024, Stony Brook University, 11th-15th March 2024

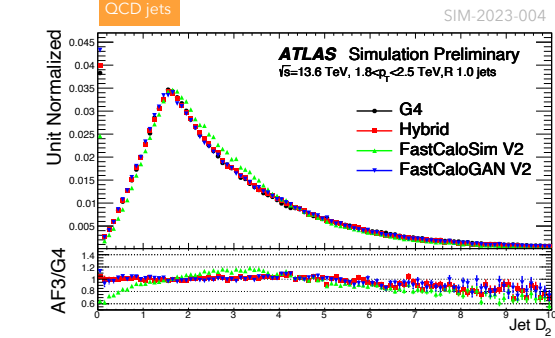

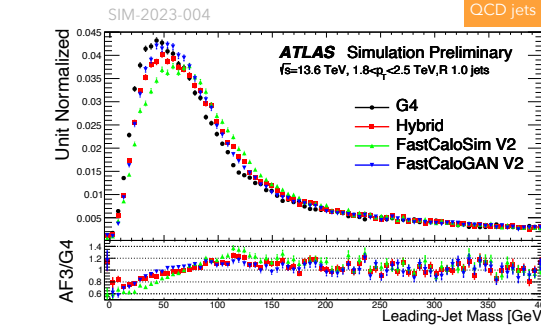

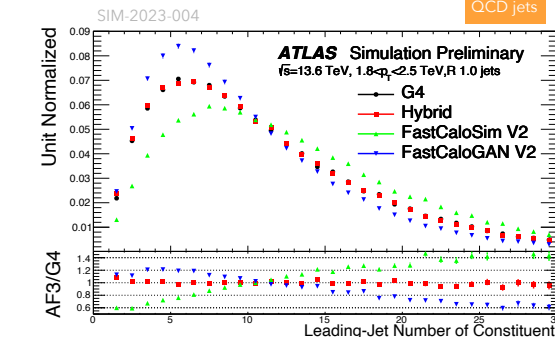

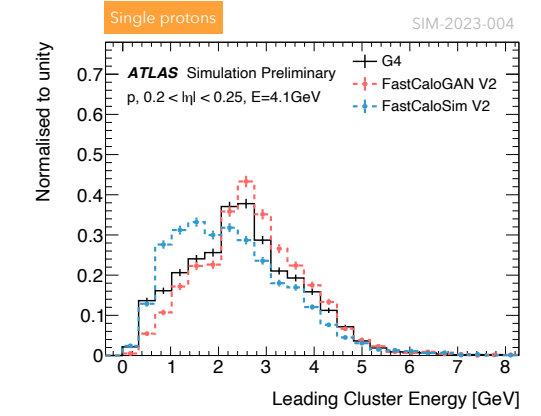

CPU Performance

3 - 15x speed-up in simulation time with respect to Geant4, depending on the physics process

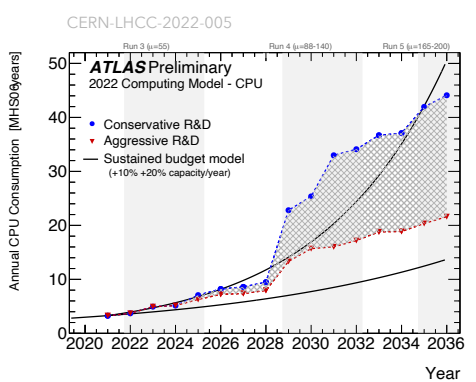

Physics Performance

Hybrid approach offers excellent physics performance!

Motivation

Significant R&D required to keep up with rising CPU needs for Run 3 and beyond

Most CPU consumption spent on MC detector simulation with **80-90% used for simulation of the calorimeter**

Strategy

Two distinct approaches of shower generation:

FastCaloSimV2

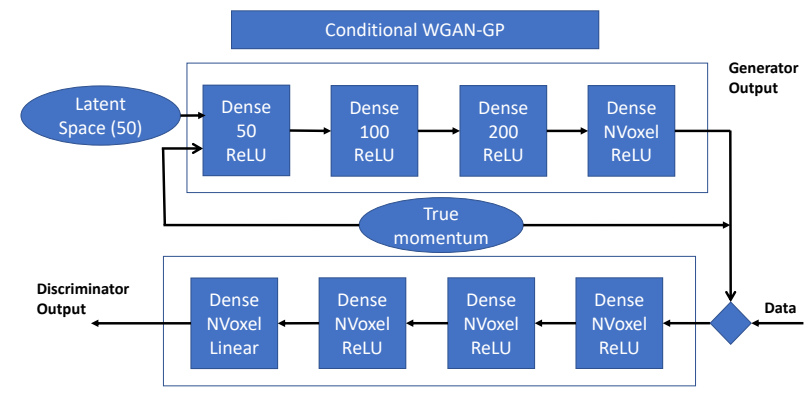

- Parametrised modelling using Geant4 single photon, electron and pion samples
- Parametrisation in 17 logarithmically spaced energy bins from 64 MeV to 4 TeV and 100 linearly spaced bins in $|\eta|$ from 0 to 5
- Separate parametrisation of **longitudinal** and **lateral** shower development
- Decorrelate energy in layers using **Principal Component Analysis (PCA)**
- Average lateral energy distribution parametrised as 2D probability functions

FastCaloGAN

- Wasserstein **Generative Adversarial Networks (GANs)** trained on each of the 100 bins in $|\eta|$ and conditioned on truth momentum
- Trained to reproduce voxels and energies in layers as well as total energy in single step
- Total of 300 GANs to cover full detector region

AtFast3 Configuration for Run 3

	Inner Detector	Calorimeters	Muon Spectrometer
Electrons Photons	Geant4	FastCaloGAN V2 $E_{min} < 8 \text{ GeV} \ \&\& \ \eta < 2.4$ Except $[0.9 < \eta < 1.1, 1.35 < \eta < 1.5]$	FastCaloSim V2 $E_{min} > 16 \text{ GeV} \ \&\& \ \eta < 2.4$ All $E_{min} \ \&\& \ [0.9 < \eta < 1.1, 1.35 < \eta < 1.5, \eta > 2.4]$
Charged Pions Kaons		FastCaloSim V2 $E_{min} < 4 \text{ GeV} \ \&\& \ \eta < 1.4$ $E_{min} < 1 \text{ GeV} \ \&\& \ \eta < 3.15$	FastCaloGAN V2 $E_{min} > 8 \text{ GeV} \ \&\& \ \eta < 1.4$ $E_{min} > 2 \text{ GeV} \ \&\& \ 1.4 < \eta < 3.15$ All $E_{min} \ \&\& \ \eta > 3.15$
Baryons		FastCaloGAN V2	
Muons		Geant4	
			Muon Punchthrough + Geant4

Conclusion

- AtFast3 is the **state-of-the-art fast simulation in ATLAS** and able to simulate broad range of physics processes with high precision
- AtFast3 provides **significant improvements in physics performance** compared to predecessor
- Simulation time in AtFast3 completely dominated by full simulation of the Inner Detector

Joshua Falco Beirer (CERN), on behalf of the ATLAS collaboration
