Indico: an Open Source event management system

Tuesday, 12 March 2024 15:40 (20 minutes)

We will be presenting Indico, an event-management system born out of the collaborative spirit at CERN. Initially developed more than 20 years ago, to meet the unique demands of the world's largest physics lab, Indico has since evolved and transcended its origins, becoming a globally adopted solution for the organization events of all scales, used in more than 300 organizations world wide, including the United Nations, and integrated in a lively user community. We will be focusing on the main features of the tool, its role at CERN, integration with organizational tools (e.g. CERNBox), as well as the work we have been doing in community building, and our plans and ideas for the future.

Primary authors: MÖNNICH, Adrian (CERN); FERREIRA, Pedro (CERN)

Presenter: MÖNNICH, Adrian (CERN)

Session Classification: Collaboration Products
