## Z $\rightarrow$ uds in the barrel

From data calculate  $\text{rms}_{90}(E_{jj})$  and  $\text{mean}_{90}(E_{jj})$

$$\frac{\sigma(E_j)}{E_j} = \frac{\text{rms}_{90}(E_{jj})}{\text{mean}_{90}(E_{jj})} \sqrt{2}$$

$$\Delta \frac{\sigma(E_j)}{E_j} = \frac{\frac{\sigma(E_j)}{E_j}}{\sqrt{N}}$$

This is based on a script from M. Thomson.
