The Alice AOD analysis model

Wednesday 28 March 2007 15:00 (30 minutes)

The talk will describe the ALICE analysis model and in particular the usage and structure of AODs. As most of the analysis will be performed with these objects, both on the Grid and locally, with or without PROOF, their structure and functionality is critical for the performance of the analysis of the experiment. The talk will describe the particular choices made for the structure of the AODs and the first results of their usage in different conditions.

Presenter: CARMINATI, Federico (CERN/Alice)
