The MadTools/StatTools package

Wednesday 28 March 2007 12:00 (30 minutes)

The MadTools/StatTools package provides a unified interface for several methods to perform single-channel and multiple-channel confidence level calculations. We briefly review the general structure of the code and the algorithms already implemented, and we discuss efforts presently underway to incorporate fit-based confidence level calculations.

Presenter: QUAYLE, William (Wisconsin/Atlas)
