

Web based HEP Analysis powered by Ajax

Monday, 26 March 2007 14:00 (30 minutes)

Ajax is a web development technique that empowers web pages with the richness and interactivity usually found in desktop applications, thus significantly enhancing the user experience. In this talk we shall outline the Ajax processing model and present an online analysis tool based on a simple pattern where the presentation layer is an intuitive User Interface and the server side is a CGI program that uses Root for the analysis.

Presenter: SARKAR, Subir (INFN/CMS)
