

Status of SQL and XML I/O in ROOT

Monday, 26 March 2007 17:00 (30 minutes)

New developments since last ROOT workshop will be presented. Main topics will be:

- * new ODBC driver, improvements in MySQL and Oracle plugins;
- * new TSQLStatement class for work with prepared SQL statements and native data types;
- * new TSQLFile class for storage of ROOT objects in SQL data bases;
- * support of custom streamers and subdirectories in XML/SQL files;
- * improvements in XML I/O;
- * practical examples of XML and SQL I/O usage.

Presenter: LINEV, Sergey (GSI)
