Outline

IS&ETD Hidetoshi Taya, Sun 14:00

nPDFs Petja Paakkinen, Thu 14:50

CGC Farid Salazar, Thu 15:15

UPCs Minjung Kim, Fri 8:45

Initial state physics

- What is the state of nucleus before the collision?
- How is energy deposited in the collision region?
- What are relevant initial state fluctuations?

Early time dynamics

- How does pre-equilibrium affect soft observables?
- How does pre-equilibrium affect hard observables?
- What is happening in small systems?

Jet response Daniel Pablos, Thu 09:00

Hard-Soft Ismail Soudi, Thu 09:25

Finite-size Isobel Kolbe, Thu 09:50

EW T Lipei Du Thu, 14:00

UPCs Minjung Kim, Fri 8:45

Initial state at short distances

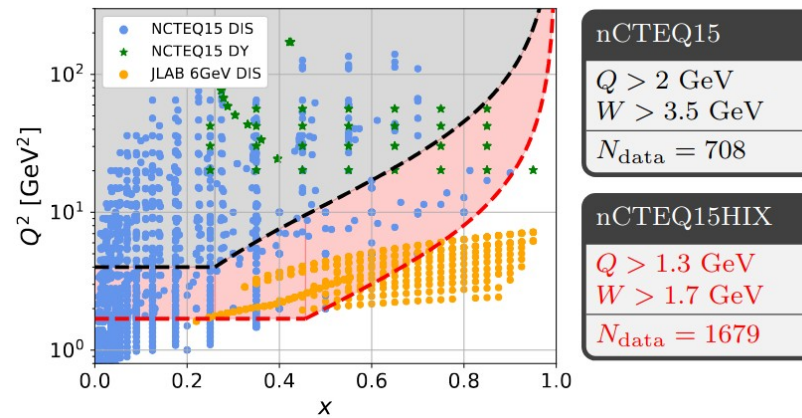

Nuclear parton distribution functions

- Important for pQCD (no-medium) baseline computations
- New nCTEQ24/5 fit with more data and new parametrization
- Caution needed for data with possible final state effects

Comparison to other nPDFs

Extended kinematics

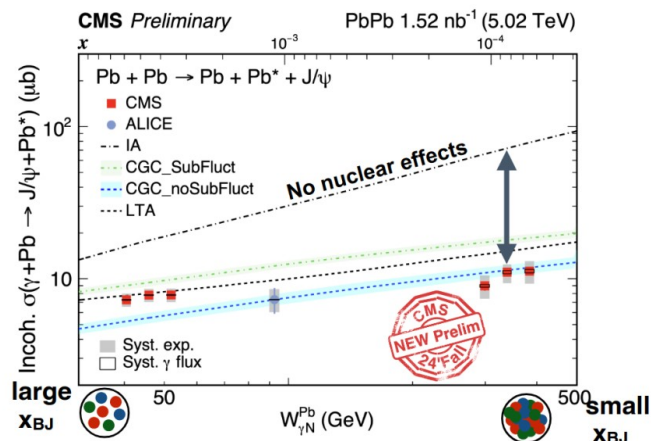

- Important to compare multiple nPDF extractions
- Data missing for light-ions \rightarrow uncertainties in A -dependence

New constraints from ultra-peripheral collisions

- Access a wide range of Bjorken x ($10^{-4} < x < 10^{-2}$) and Q values

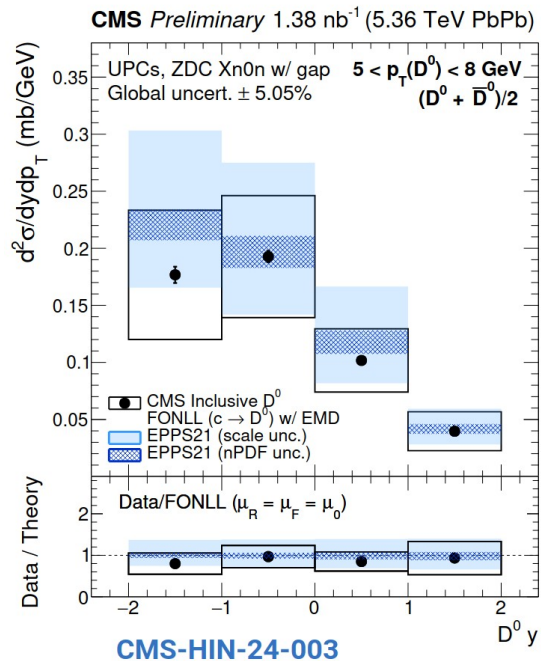

incoherent J/ψ production

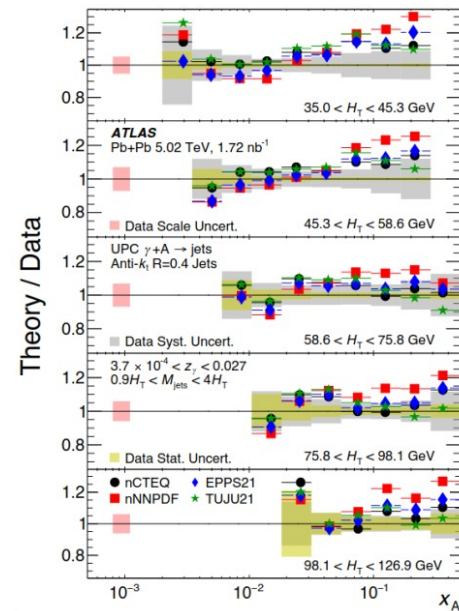

Ye,
Wed 11:30

Mc Ginn
Wed 10:50

D^0 measurement

jets

Gilbert
Wed 12:10

- UPCs should be included in global nPDF fits

New constraints from pPb collisions

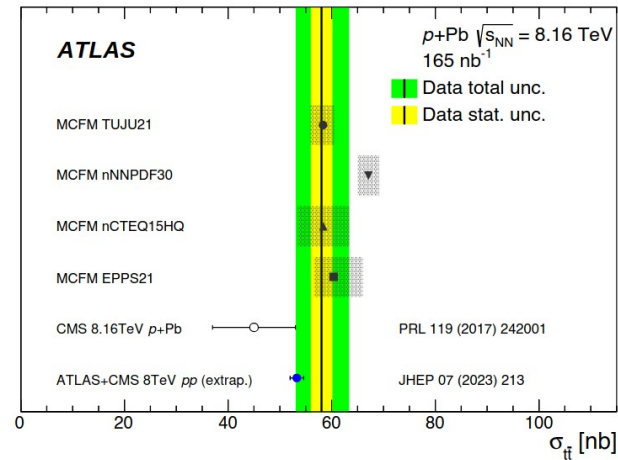

- t-tbar: 9% uncertainty in cross-section
- di-jets: 10^5 entries in uncertainty covariance matrix

di-jets small x

Nigmatkulov
Mon, 14:00

$t\bar{t}$ large x

Potępa
Mon, 14:20

- Absolute di-jet cross-sections would be even better
- More statistics needed for differential t-tbar measurement

Alternative to PDFs: structure functions

- Structure functions measurable in deep-inelastic scattering

$$\frac{d^2\sigma^i}{dx dy} = \frac{4\pi\alpha^2}{xyQ^2} \eta^i \left\{ \left(1 - y - \frac{x^2 y^2 M^2}{Q^2}\right) F_2^i + y^2 x F_1^i \mp \left(y - \frac{y^2}{2}\right) x F_3^i \right\},$$

- Replace PDFs with structure functions

$$F_i(x, Q^2) = \sum_j C_{ij}(Q^2, \mu^2) \otimes f_j(\mu^2)$$

Physical basis evolution

- Renormalization scheme in $\alpha_s(\mu_r^2)$
- Perturbative truncation
→ sum rule not exact
- Parametization of observable quantities

Evolution with PDFs

- Factorization scheme and scale
- Renormalization scheme in $\alpha_s(\mu_r^2)$
- Easy to enforce an exact sum rule
- Parametization of non-observable quantities

Tevio
Mon, 15:20

- Will benefit from future EIC data
- A lot of work still needed to catch up with PDF precision

Initial state at long distances

New constraints from ultra-central collisions

- Great success story of theory proposal and experimental measurement
- Precision determination of nuclear structure

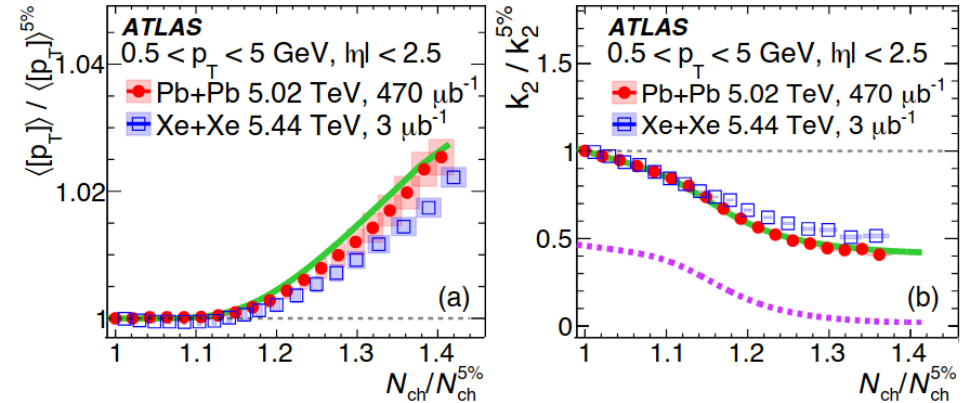

. Gardim, Giacalone, Ollitrault, PLB (2020)

Giacalone, PRL (2020)

p_T-v_2 correlations

p_T fluctuations

STAR
2401.06625

Bold, 16:50

Model, Pb+Pb
- ● Geometrical
- ● Geometrical+Intrinsic (d)

- Validation of heavy-ion modeling and measurement
- Light-ions \rightarrow direct comparison to ab-initio computations

Giacalone et al. 2402.05995

Puzzling longitudinal phenomena

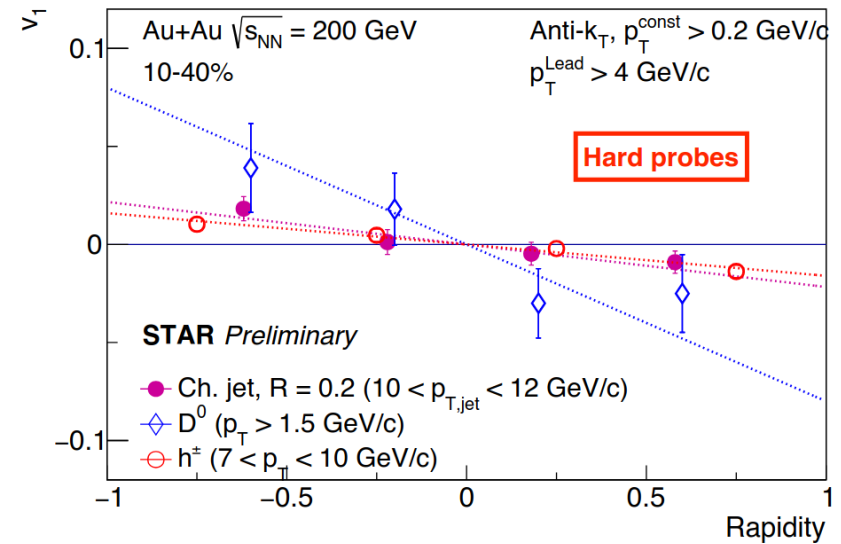

- Strong rapidity decorrelation of flow coefficients
- Jets and heavy-mesons show large directed flow

longitudinal flow decorrelation

directed flow of jets

Radhakrishnan,
Tue 14:00

Seidlitz,
Mon 14:20

Need better description of 3D initial state

New 3D initial state models

Garcia-Montero, Elfner, Schlichting, 2308.11713

McDipper

- k_{\perp} factorized CGC + DIS input
- baryon stopping
- systematically improvable

mid-rapidity forward-rapidity

Kuha, Auvinen, Eskola, Hirvonen, Kanakubo, Niemi, 2406.17592

MC-EKRT

- pQCD mini-jet production
- low and high- p_T partons
- impact-parameter dependent nPDFs

transverse longitudinal

Now need integration in heavy-ion simulations

Bulk early time dynamics

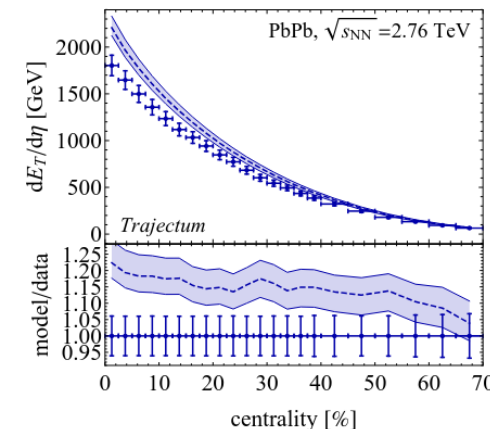

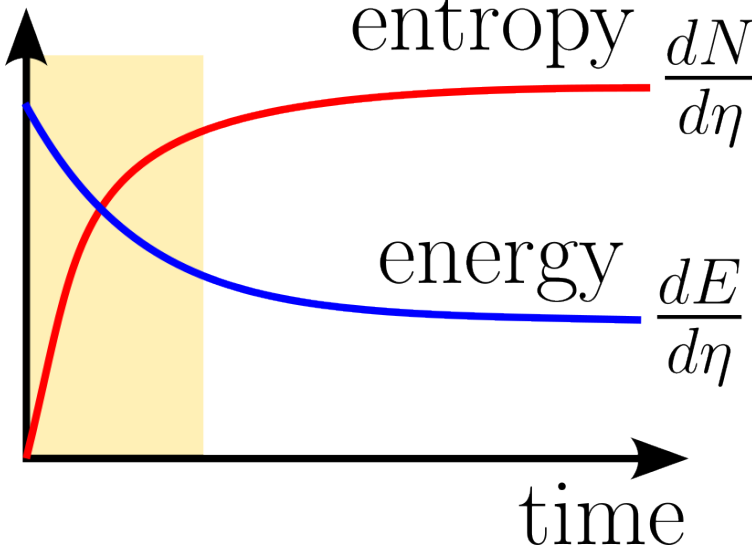

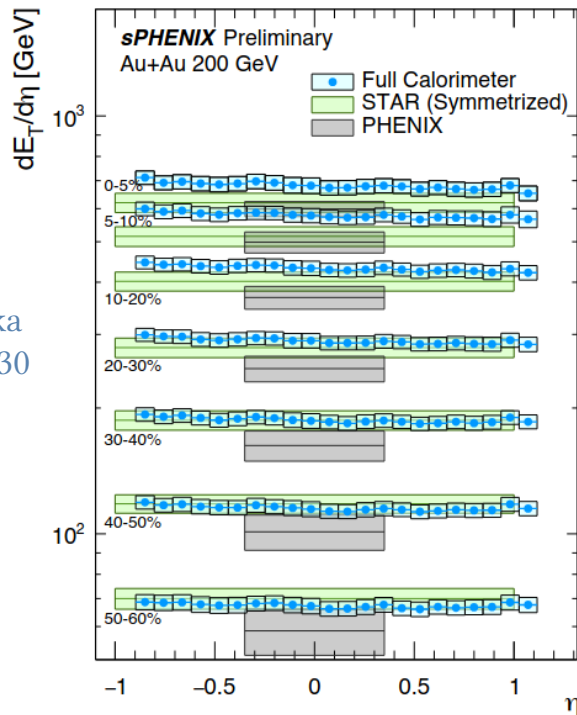

Hard-Soft Ismail Soudi, Thu 09:25

Energy and entropy equilibration

- Energy and multiplicity sensitive to pre-equilibrium

Energy per rapidity

Giacalone, AM, Schlichting, PRL 2019

Nukazuka
Mon 16:30

Energy flow harmonics would help in small systems

Nijs van der Schee, PRL (2022)

Quantifying hydrodynamic behavior

- Flow response sensitive to opacity parameter (interaction rate)

$$v_n = \kappa_{n,n} \cdot \epsilon_n$$

- Extract slope W using log derivative

hydrodynamization observable

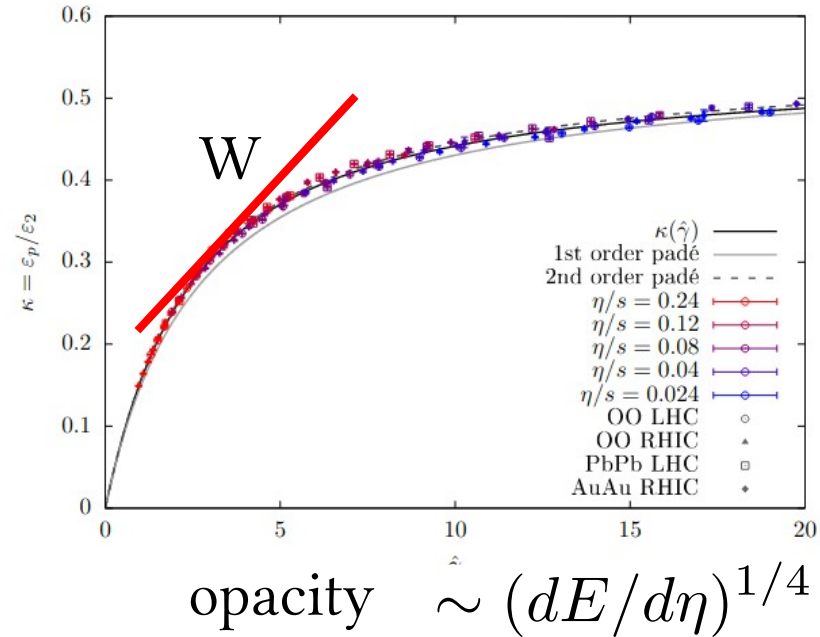

$$W = \frac{2}{k} \frac{\Delta \log(c_2\{2k\})}{\Delta \log(dE_{\perp}/dy)} \approx \frac{d \log \kappa}{d \log \hat{\gamma}}$$

previous hydrodynamization criterion

$$\hat{\gamma} \sim 3 \text{ corresponds to } W \sim 0.5$$

flow/ellipticity

Werthmann
Mon 15:50

Need same geometry, different energy \rightarrow e.g. OO at RHIC and LHC

Adiabatic hydrodynamization at early and late times

- Parametrize distribution with generalized scaling form
- Find the eigenvalues of kinetic evolution $f(p, p_z, y) = A(y)w\left(\frac{p}{D(y)}, \frac{p_z}{p}, r(y), y\right)$

Scaling exponents

Eigenvalues

Steinhorst
Mon 17:10

thermal state

Convenient to study different stages of bottom-up thermalization in a single framework

Jets and heavy-quarks in pre-equilibrium

Hard-Soft Ismail Soudi, Thu 09:25

Quark diffusion in glasma phase

- Initial stages dominated by strong anisotropic glasma fields
- Simulate back-to-back heavy quark diffusion as a classical particle

Glasma fields

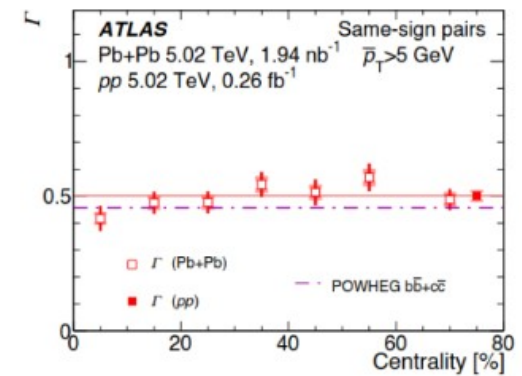

Avramescu
Tue, 14:40

$c\bar{c}$ decorrelation

$\mu\mu$ correlation width from beauty decays

Mohapatra, Tue 14:00

- Predicts large azimuthal decorrelation of $c\bar{c}$ pairs in glasma $\rightarrow D\bar{D}$
- Later stage diffusion not included; no decorrelation measured for beauty

Anisotropic \hat{q} in early stages

See also Sadofyev, Mon 17:50,
Silvia, Wed 11:10

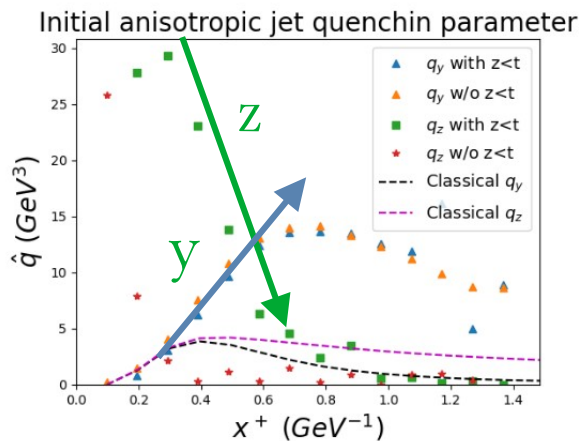

- Light-front Hamiltonian treatment of broadening in glasma
- QCD kinetic theory computation of broadening in non-equilibrium QGP

Lamas, Wed 12:10

anisotropic broadening

glasma phase

kinetic phase

Lindenbauer, Mon 17:30

- Enhanced broadening along beam axis in early stages

Effect of flow and gradients

Jet response Daniel Pablos, Thu 09:00

Effect of collective flow and gradients on jets

- Flow/gradients \rightarrow anisotropic radiation/quenching
- An idea proposed 20 years ago...

Armesto, Salgado, Wiedemann PRL (2004)

Salgado
Wed 11:30

Why now?

- Theoretical progress in jet quenching formalism
- Experimental progress in measuring
- Could contribute to high-momentum v_2

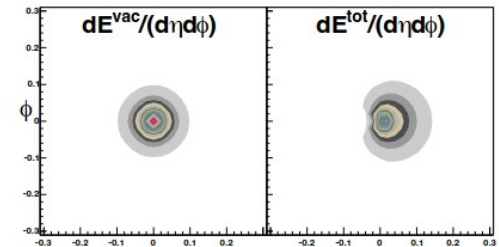

Effect of collective flow and gradients on jets

- Flow/gradients \rightarrow anisotropic radiation/quenching
- An idea proposed 20 years ago...

Armesto, Salgado, Wiedemann PRL (2004)

Old but not obsolete

Salgado
Wed 11:30

Why now?

- Theoretical progress in jet quenching formalism
- Experimental progress in measuring
- Could contribute to high-momentum v_2

Different model implementations

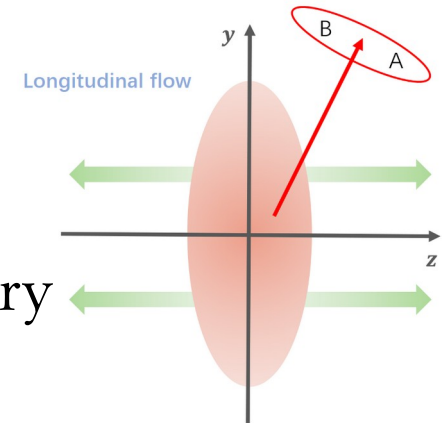

- Realistic hydro
- Parton shower
- Anisotropic parton evolution
- Effect on R_{AA} , v_2 ...

Bahder, Mon 11:50

- Realistic hydro
- Parton shower
- Linear Boltzmann Transport
- Intra-jet asymmetry

Luo, Wed 10:00

Fries, Wed 10:50

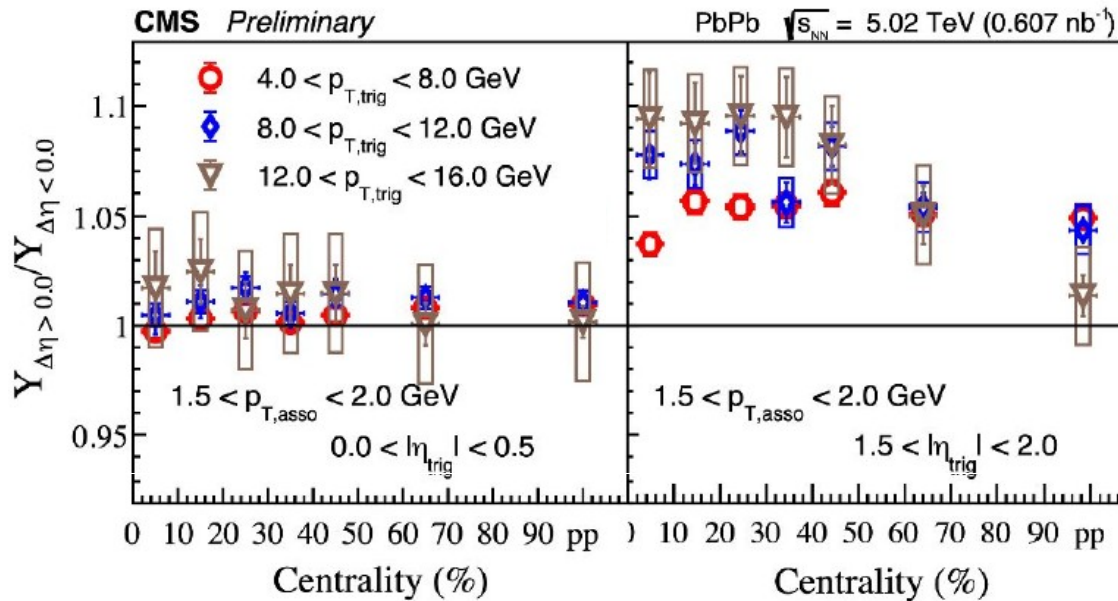

Longitudinal asymmetry of the near-side peak

See also ALICE PRL (2017)

di-hadron correlation rapidity asymmetry

Chatterjee, poster

mid-rapidity

forward-rapidity

- Increasing rapidity with system-size for soft hadrons
- Increasing rapidity asymmetry in forward-rapidity
→ sign of longitudinal flow?

EW T Lipei Du Thu, 14:00

EW E Daiki Skihata, Thu 14:25

EW H Jean-Francois Paquet, Fri 12:15

Electromagnetic probes in pre-equilibrium

See next talk by Jean-Francois Paquet

Garcia-Montero, Tue 09:00

KEY MESSAGE TODAY

The dynamics and evolution of the pre-equilibrium phase of HICs can be accessed based on a phenomenology of the electromagnetic probes.

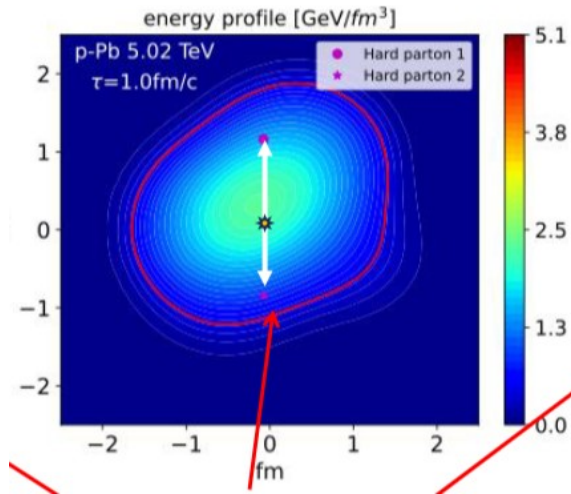

Small systems

Finite-size Isobel Kolbe, Thu 09:50

Energy loss in small systems with X-SCAPE

- Concurrent running of hard, hydro and hadronic evolution
- Energy conservation important in small systems

pPb fireball at 1 fm/c

Jet modification factor

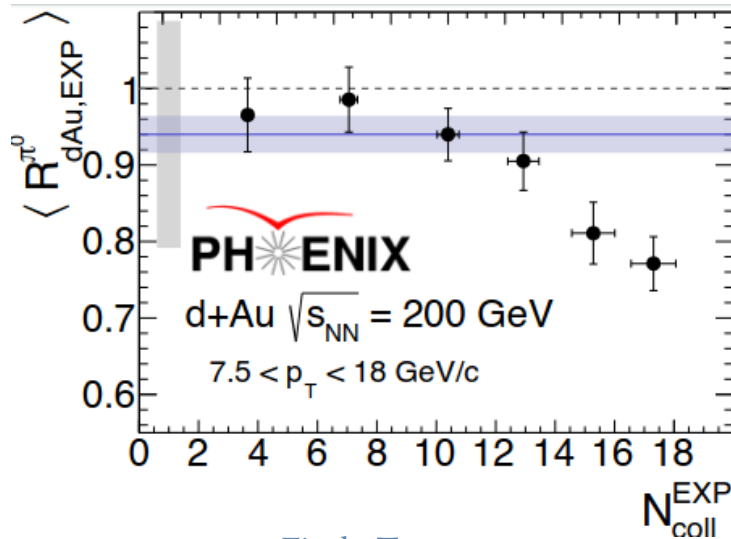

Jeon/Majumder
Wed 16:15

- Good description of pp data → important baseline
- No significant suppression in jets and leading hadrons in pp, pA

Potential energy loss signal in dAu

Use direct photons to estimate N_{coll} experimentally

Suppression of high p_T pions

Firak, Tue 15:35

Color Fluctuation Model

Perepelitsa, Mon 14:40

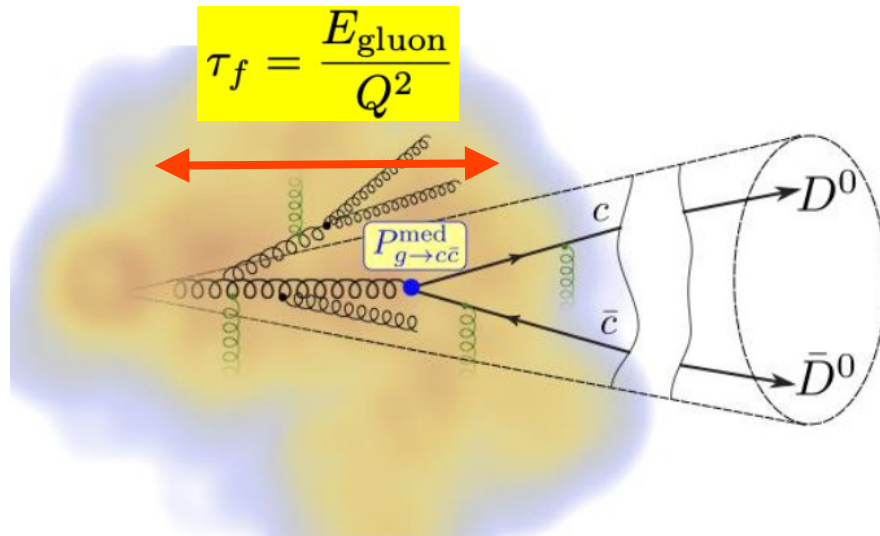

Selection bias to large Bjorken $x \rightarrow$ possible suppression from initial state effect

Probing formation time with heavy quarks

- Use heavy quark splittings as a distance-ruler
- Softdrop + Flavorcone to reconstruct splitting time

Wiedemann, Tue 15:55

formation time

location of avg. scattering center $\sim L/2$

Possibility to measure the system size directly

Conclusions

Conclusions

nPDFs Petja Paakkinen, Thu 14:50
CGC Farid Salazar, Thu 15:15
UPCs Minjung Kim, Fri 8:45

Initial state physics

- UPC – new constraints on nPDFs
- UCC – new constraints on nuclear structure and fluctuations
- Longitudinal dynamics still puzzling → new theory models

Early time dynamics

- Thermalization affects energy and entropy production
- Anisotropic quenching in glasma and kinetic phases
- Jet interplay with QGP flow and temperature gradients
- Importance of electromagnetic probes
- Energy loss in small systems still debatable
→ opportunity for oxygen-oxygen collisions

Hard-Soft Ismail Soudi, Thu 09:25
EWT Lipei Du Thu, 14:00
EWE Daiki Skihata, Thu 14:25
