

12th International Conference on Hard and Electromagnetic Probes of High-Energy Nuclear Collisions

Contribution ID: 141

Type: **Poster**

Strangeness studies in LHCb heavy-ion collisions

Tuesday 24 September 2024 18:10 (20 minutes)

Strange hadron production provides information about the hadronization process in high-energy hadron collisions. Strangeness enhancement has been interpreted as a signature of quark-gluon plasma formation in heavy-ion collisions, and recent observations of strangeness enhancement in small collision systems have challenged conventional hadronization models. With its forward geometry and excellent particle identification capabilities, the LHCb detector is well-suited to study strangeness production in a unique kinematic region. Recent studies of strangeness production with the LHCb detector will be presented, including measurements of strangeness enhancement in the charm- and beauty-hadron systems

Category

Experiment

Collaboration

LHCb

Author: WANG, Jianqiao (Tsinghua University (CN))

Presenter: WANG, Jianqiao (Tsinghua University (CN))

Session Classification: Poster Session

Track Classification: 5. Nuclear PDFs, saturation, and early time dynamics
