

Introduction: MD10703 (“Ions BB limit varying the crossing angles”)

- **MD discussed and approved in rMPP on Oct. 11th**
 - 160 bunches per beam
 - Reduction of crossing angle in all IPs
 - Change of TCT/TCL positions
 - Validation with loss maps and ASD successfully performed
- **MD could not take place during the foreseen MD slot**
 - Plan to do a reduced version at the end of the 450b validation fill (with lower bunch intensity) but fill was dumped early
- **Request to perform MD as End-of-Fill MD**
 - Implies full machine (>1000b)
 - Procedure?

Bunch Intensity
