Search for inelastic dark matter in association with a dark Higgs boson at Belle II [15+5]

Thursday 16 May 2024 16:50 (20 minutes)

Belle II has a unique reach for a broad class of models that postulate the existence of dark matter particles in the MeV-GeV mass range. One scenario is a model which involves inelastic dark matter, consisting of two dark matter states with a mass splitting between them and the presence of a dark Higgs boson. This model has a signature of up to two displaced vertices, one from the resonant decay of the dark Higgs and another non-resonant one emerging from the decay of the involved dark matter particles. This talk will present studies of an ongoing search for such signatures using Belle II simulation, which is not only challenging due to the presence of displaced vertices but also because of the seven-dimensional parameter space of the model.

Presenter: ECKER, Patrick

Session Classification: Dark Higgs

Track Classification: Dark Higgs
