

Perspective of Some Trends

September 30th, 2024

SDSC
SAN DIEGO SUPERCOMPUTER CENTER

UC San Diego

**Data is becoming a first class
citizen in software & computing**

Two big Trends driving Data

Artificial Intelligence

- National AI Research Resource (**NAIRR**)
 - Expected funding of \$2.6B over 6 years
 - Across more than a dozen federal agencies with NSF as lead
- Frontiers in AI for Science, Security and Technology (**FASST**)
 - AI Centers at DOE labs for \$30M/year for 5-7 years

Instrument integration

- Instrument labs at Universities that can produce TB/hour data volumes
 - High Throughput instrumentations that produces curated data
- DOE Integrated Research Infrastructure program (**IRI**)
 - High Performance Data Facility

NAIRR

Currently in Pilot Stage.
See <https://nairrpilot.org> for details.

The National Artificial Intelligence Research Resource (NAIRR) Pilot

The NAIRR Pilot aims to connect U.S. researchers and educators to computational, data, and training resources needed to advance AI research and research that employs AI. Federal agencies are collaborating with government-supported and non-governmental partners to implement the Pilot as a preparatory step toward an eventual full NAIRR implementation.

- Spur innovation
- Increase diversity of talent
- Improve capacity
- Advance trustworthy AI

Currently a draft bill

NEW: Request for Information

DOE is seeking public input to inform how DOE can leverage its existing assets at its 17 national labs and partner with external organizations to support building a national AI capability. Responses are due by Monday, November 11, 2024.

FASST Overview

FASST will build the world's most powerful integrated scientific AI systems through four key interconnected pillars:

AI-Ready Data	+
Frontier-Scale AI Computing Infrastructure and Platforms	+
Safe, Secure, and Trustworthy AI Models and Systems	+
AI Applications	+

Download the factsheet

[📄](#) on Frontiers in Artificial Intelligence for Science, Security and Technology (FASST)

*The draft bill as written emphasizes creation of at least **8 multidisciplinary AI Research and Development Centers at DOE National Labs** Each center shall receive an annual budget of no less than \$30M for a duration between 5-7 years, with a possible renewal for another 5 years.*

Integrated Research Infrastructure

Integrated Research Infrastructure Architecture Blueprint Activity (Final Report 2023)

TECHNICAL REPORT · 03 July 2023

The complexity of scientific pursuits is increasing rapidly with aspects that require dynamic integration of experiment, observation, theory, modeling, simulation, visualization, machine learning (ML), artificial intelligence (AI), and analysis. Research projects across the Department of Energy (DOE) are increasingly data and compute intensive. Innovative research teams are accelerating the pace of discovery by using high-performance computational and...

There are 10 DOE Office of Science Laboratories and 28 DOE Scientific User Facilities, incl. supercomputers (NERSC, ANLCF, ORLCF, ...), accelerators, light sources, neutron scattering sources, Tokamaks, ... and ESnet

Office of Science Laboratories

- 1 Ames National Laboratory
Ames, Iowa
- 2 Argonne National Laboratory
Argonne, Illinois
- 3 Brookhaven National Laboratory
Upton, New York
- 4 Fermi National Accelerator Laboratory
Batavia, Illinois
- 5 Lawrence Berkeley National Laboratory
Berkeley, California
- 6 Oak Ridge National Laboratory
Oak Ridge, Tennessee
- 7 Pacific Northwest National Laboratory
Richland, Washington
- 8 Princeton Plasma Physics Laboratory
Princeton, New Jersey
- 9 SLAC National Accelerator Laboratory
Menlo Park, California
- 10 Thomas Jefferson National Accelerator Facility
Newport News, Virginia

Other DOE Laboratories

- 1 Idaho National Laboratory
Idaho Falls, Idaho
- 2 National Energy Technology Laboratory
Morgantown, West Virginia
Pittsburgh, Pennsylvania
Albany, Oregon
- 3 National Renewable Energy Laboratory
Golden, Colorado
- 4 Savannah River National Laboratory
Aiken, South Carolina

NNSA Laboratories

- 1 Lawrence Livermore National Laboratory
Livermore, California
- 2 Los Alamos National Laboratory
Los Alamos, New Mexico
- 3 Sandia National Laboratories
Albuquerque, New Mexico
Livermore, California

DOE scientific facilities are to be integrated for cross facility science workflows.

HPDF: A New Element in the ASCR Ecosystem

Leading-edge science demands integration, and the U.S. Department of Energy's science programs increasingly require advanced computation, data solutions, and networking. The High Performance Data Facility, a first-of-its-kind project, is envisioned as a state-of-the-art resource for data science and research. HPDF will join other Advanced Scientific Computing Research facilities engaged in implementing the DOE's Integrated Research Initiative.

As the cornerstone of the IRI, HPDF is committed to supporting scientific research patterns and data stewardship within the nation's research communities. Along with the other ASCR facilities – Energy Sciences Network, Argonne Leadership Computing Facility, Oak Ridge Leadership Computing Facility, and the National Energy Research Scientific Computing Center – HPDF will help forge the IRI's foundational infrastructure.

The project's hub-and-spoke model will maximize availability, resilience, and accessibility. The Hub core infrastructure, physically located at Thomas Jefferson National Accelerator Facility and Lawrence Berkeley National Laboratory, will support centralized resources. Multiple mission-application Spokes will connect to the Hub via ESnet.

\$300-500M "construction project" for the next 10 years

HPDF will be the 5th DOE ASCR facility

From Science Gateways to Immersive Virtual Environments

Future UI/UX will have O(1M) audiences, providing immersive experiences with content and data

Initially web portals lowered the bar for access to HPC. Today, we are building immersive virtual environment enabling access to compute & sharing of data & content.

Immersive Virtual Environments for Science

We make data and computationally intensive capabilities accessible to millions of researchers, educators, and students across disciplines through science gateways, secure cloud enclaves, research software development, and immersive visualizations.

10,000 Unix Accounts
over 5 years

100,000 user/year
on gateways

**1M users/year
for immersive environments**

~10x users/year by enabling
web access to HPC

~10x users/year by enabling
content & data sharing
