## Cloud chamber workshop

- 90 minutes duration (typical German school lesson)
  - Phase I: 40 minutes introduction into research + pause
  - Phase II: 45 minutes DIY-cloud chamber with dry ice
- Target group: Students aged 12-16
- More than 25 interventions to date with a reach of over 750 people

Photo: David Borgelt

# Based on peer teaching

„In short, peer teaching occurs when students, by design, teach other students.“  
([www.teachthought.com](http://www.teachthought.com))

- Win for the lecturers
  - Appreciation
  - Encouragement
  - Participation
- Win for the class
  - Communication at eye level
  - Role models
  - Non-school intervention
- Win for (particle) physics
  - Demystification
  - Everyday relevance
  - Presumed increase in interest

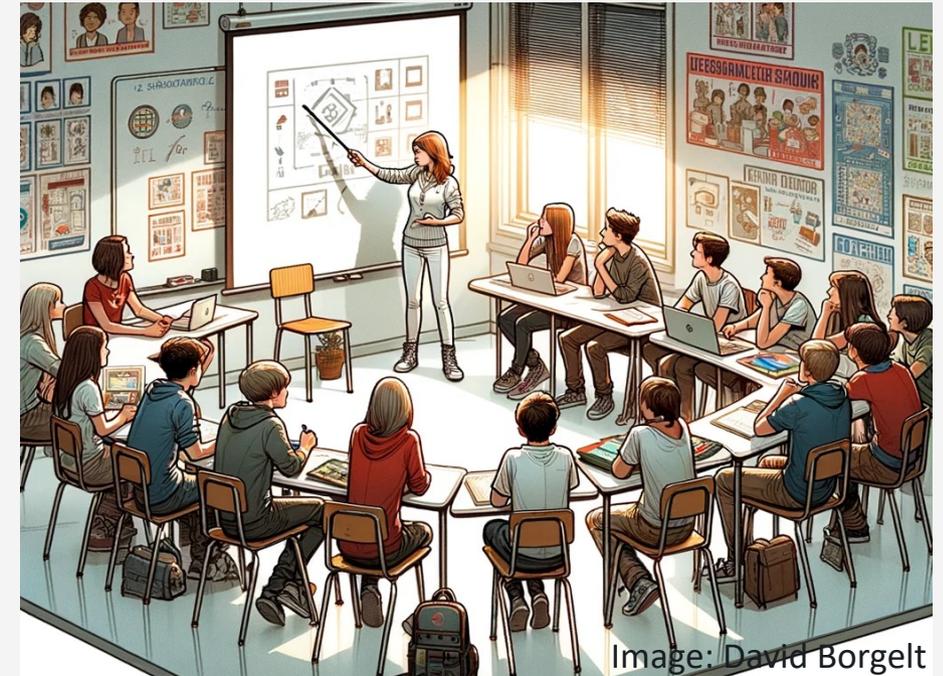

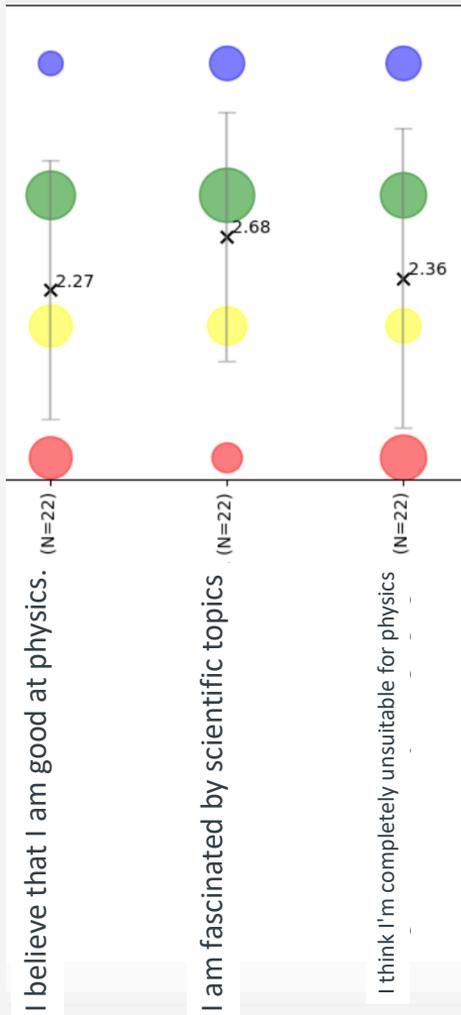

Image: David Borgelt

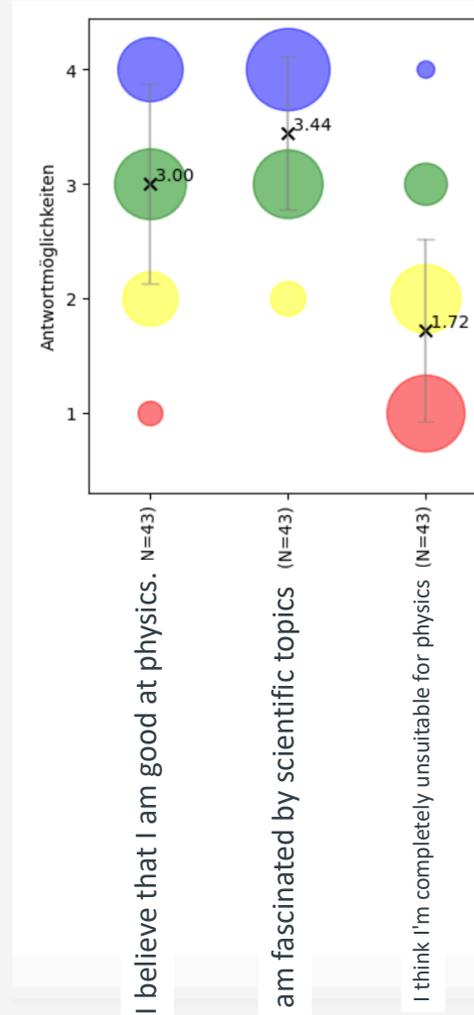

**Participation, but not trivialisation!**

## The difference between students in junior hs and senior hs

Junior

Senior

- Four-point Likert scale
- 1 = Disagree
- 4 = Agree
- Items tested (DOI: 10.1103/PhysRevPhysEducRes.19.010138)

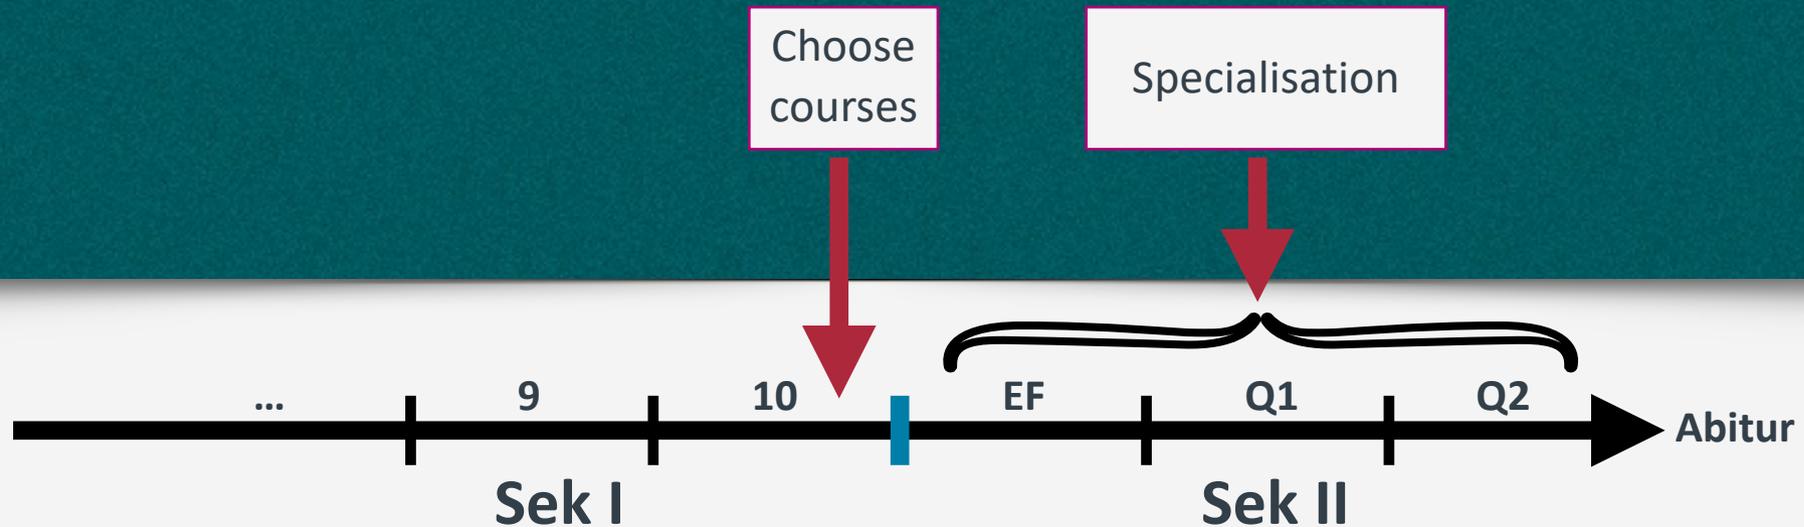

"Nobody likes physics"  
Quote: Anonymous

## The problem for young people is...

- Physics is rather unpopular
- The subjects for Senior High School and the Abitur are usually chosen at the age of 15/16
- A new choice is possible, but unusual/impractical

-> Physics is rarely chosen again and is therefore no longer a career prospect.

## The situation 10 years ago (2014)

- Huge differences between federal states
- Natural science courses are:
  - Physics
  - Chemistry
  - Biology
  - Geography

	Share ns	Share ns under f	Share f under ns

## Today's situation

- We conducted an informal survey within 15 years old girls
- In general high interest in STEM related subjects (about 80%)
  - Especially in Nature and Space
- Just a few students plan to keep on studying physics (about 20%)

## Our approach

- Learners revise our presentations
- Parts of lectures taken over by them
- Joint representation of physics at public events
- Special support (e.g. workshops at CERN, Talks at conferences)

*Working together to target specific groups*

## Another product: Y-Phi

- Young learners who helped with outreach wanted to get more involved
- We created a group to do activities together
- Name: Y-Phi (Young Physicists)
- To date 7 highly motivated girls aged 15-18

# ...instead of a summary

Mir hat es sehr gefallen diese  
 Kammer zu bauen und danach auch  
 zu wissen was da eigentlich passiert  
 ist. Im theoretischen Teil bin ich  
 manchmal nicht ganz mitgekommen,  
 aber es war sehr informativ und  
 habe auch viel mitgele

Ich fand den Vortrag interessant.  
 Besonders mochte  
 Vortrag wurde sehr visuell vorgetragen. Trotzdem  
 habe ich nicht immer alles verstanden. Insgesamt  
 habe ich viel neues gelernt

Appreciate visual presentation

I didn't always understand everything

Highlight: - dass wir selber  
 was machen konnten  
 - die Ergebnisse zu

Do things by yourself

ich fand alles sehr  
 gut!  
 Highlight: mit Trockeneis  
 experimentieren  
 Strahlung und Teilchen

Highlight:  
 - Ich fand die Präsen  
 es war super dass wir auch  
 gemacht haben.

Did something active

low: Theorie  
 high: letztes Experiment

Highlight:  
 - Am Anfang wurde sehr schnell die Sachen  
 erklärt und man könnte nicht ganz folgen.  
 mehr erklären was ein Alpha-Teilchen ist.  
 Fachbegriffe benutzen

Explain more [...]

Use fewer technical terms

Thank you!
