

CERN Library / Bibliothèque

## MEET THE AUTHOR: Chris Quigg

25 Jan 2024 at 16:30 at the CERN Library

“Chris Quigg, a distinguished Scientist Emeritus at Fermilab, is an American theoretical physicist, author, and lecturer.

His research has ranged over many topics in particle physics, from electroweak symmetry breaking and supercollider physics to heavy quarks and the strong interaction among them to ultrahigh-energy neutrino interactions. Quigg has devoted much energy to helping to define the future of particle physics—and the new accelerators that will take us there. Much of his current effort is linked with the experimental program of the Large Hadron Collider at CERN, with special attention to the problem of electroweak symmetry breaking.”

**He will present his new book, followed by a Q&A and book signing session. You will be able to buy the book from the CERN Bookshop or borrow it from the CERN Library.**
