

Belle II Update

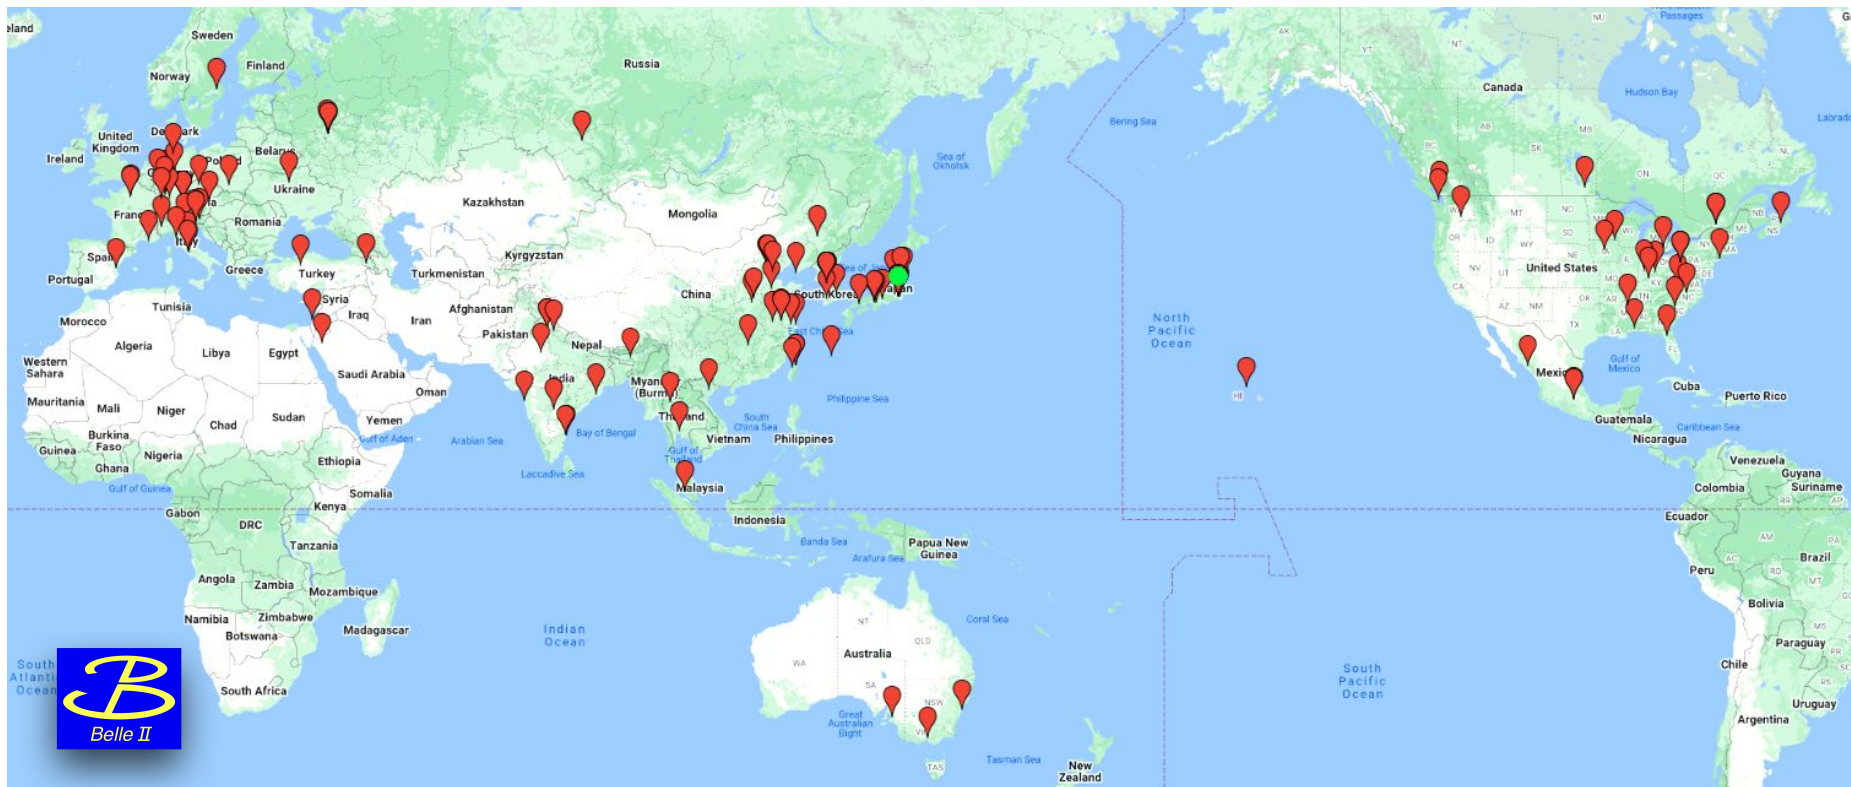

LHCONE/OPN - Catania

Dr. Silvio Pardi

10 April 2024

The Belle II Experiment

Around 1200 members, 131 institutions, 28 countries

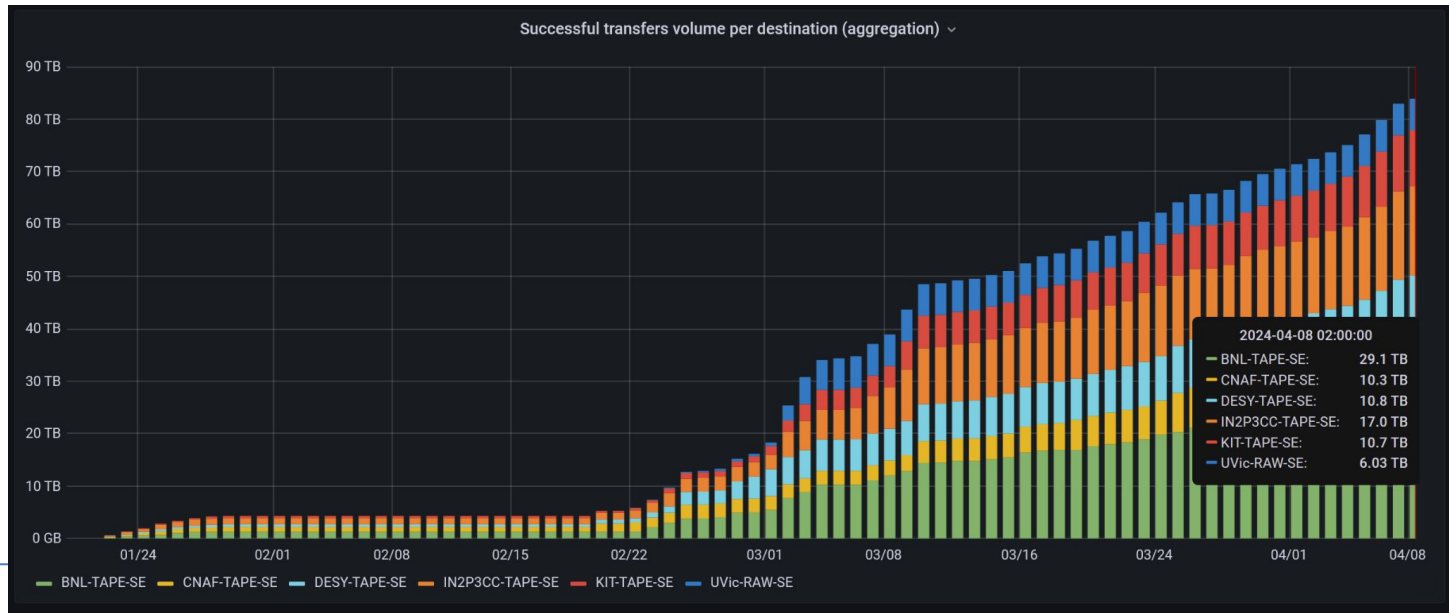

Belle II Status

Data taking started in 2019.

In July 2022 we started the Long Shutdown 1

Data taking restarted early 2024, first collision 20 February 2024.

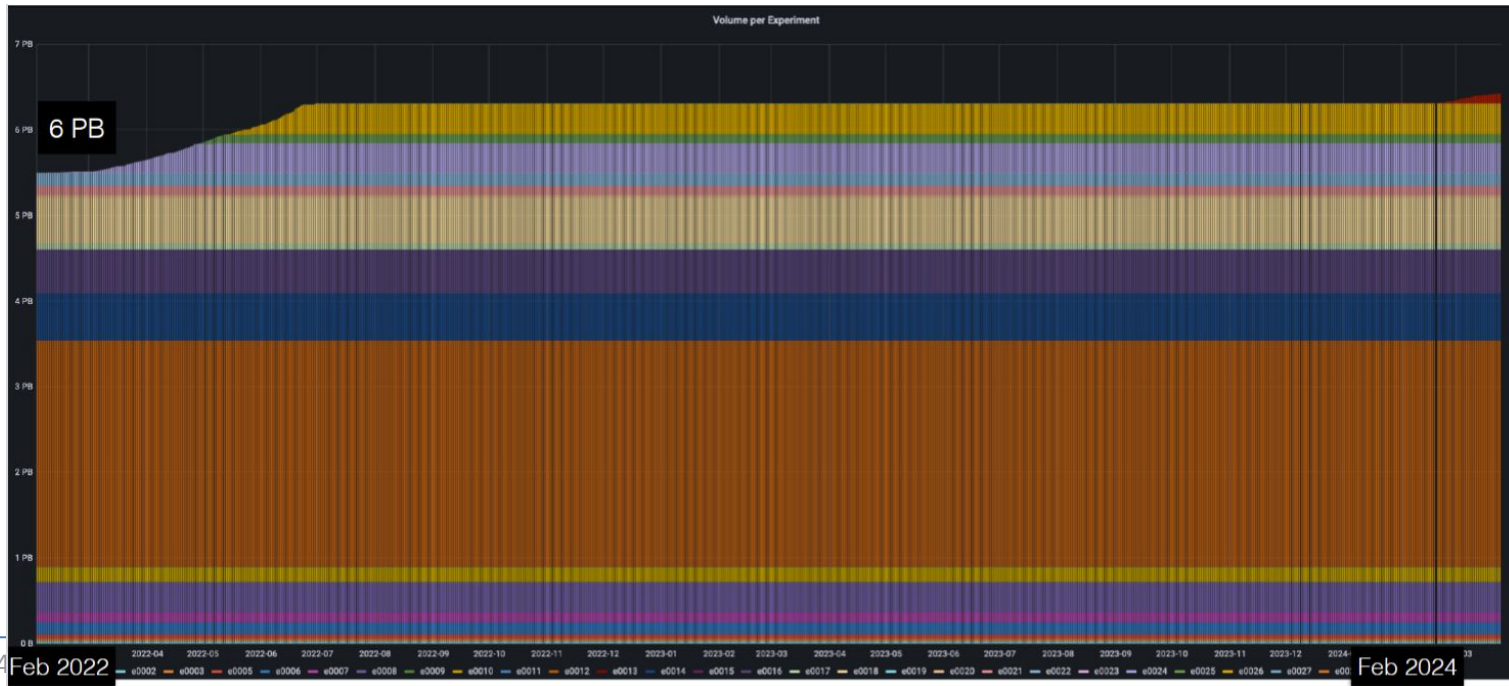

Restarted Copy of RAW Data from KEK to RAW Data Centers

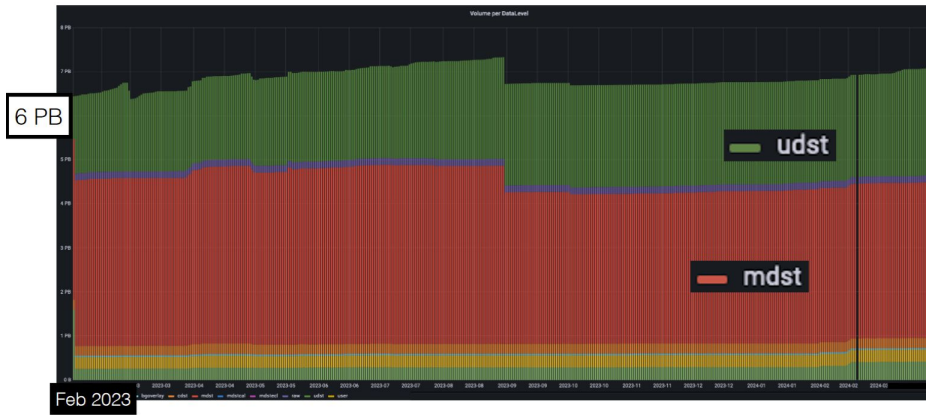

RAW Data

More than 3 PB raw data accumulated

- Incl. skimmed raw data
- Duplicated over Raw Data Centers

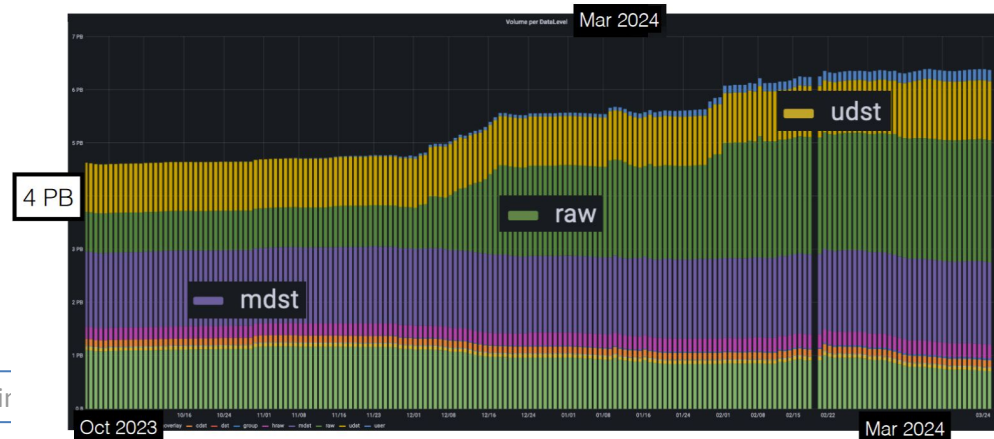

Belle II Data Volume DISK

Persistent data on DISK with life cycles based on data production/processing campaigns
 mdst: reconstructed data (both real data and MC)
 udst: skimmed data produced from mdst, with additional parameters for analysis

Temporary data/replicas on DISK
 intermediate output, raw data
 staged for reprocessing, analysis
 output, calibration data, ...

Belle II Data Challenge 2024 within WLCG DC24

Main goal: Emulate data transfer conditions in a Belle II high-lumi scenario

Our current estimation for such scenario is 40 TB per day.

Transfers from KEK to RAW Data Centers according to our distribution schema (30%BNL, 20%CNAF, 15%IN2P3CC, 15%UVic, 10%DESY, 10%KIT)

Considering that the average speed needed to transfer 40TB/day is 3.7Gbit/s in outbound at KEK vs all the Raw Data Centers.

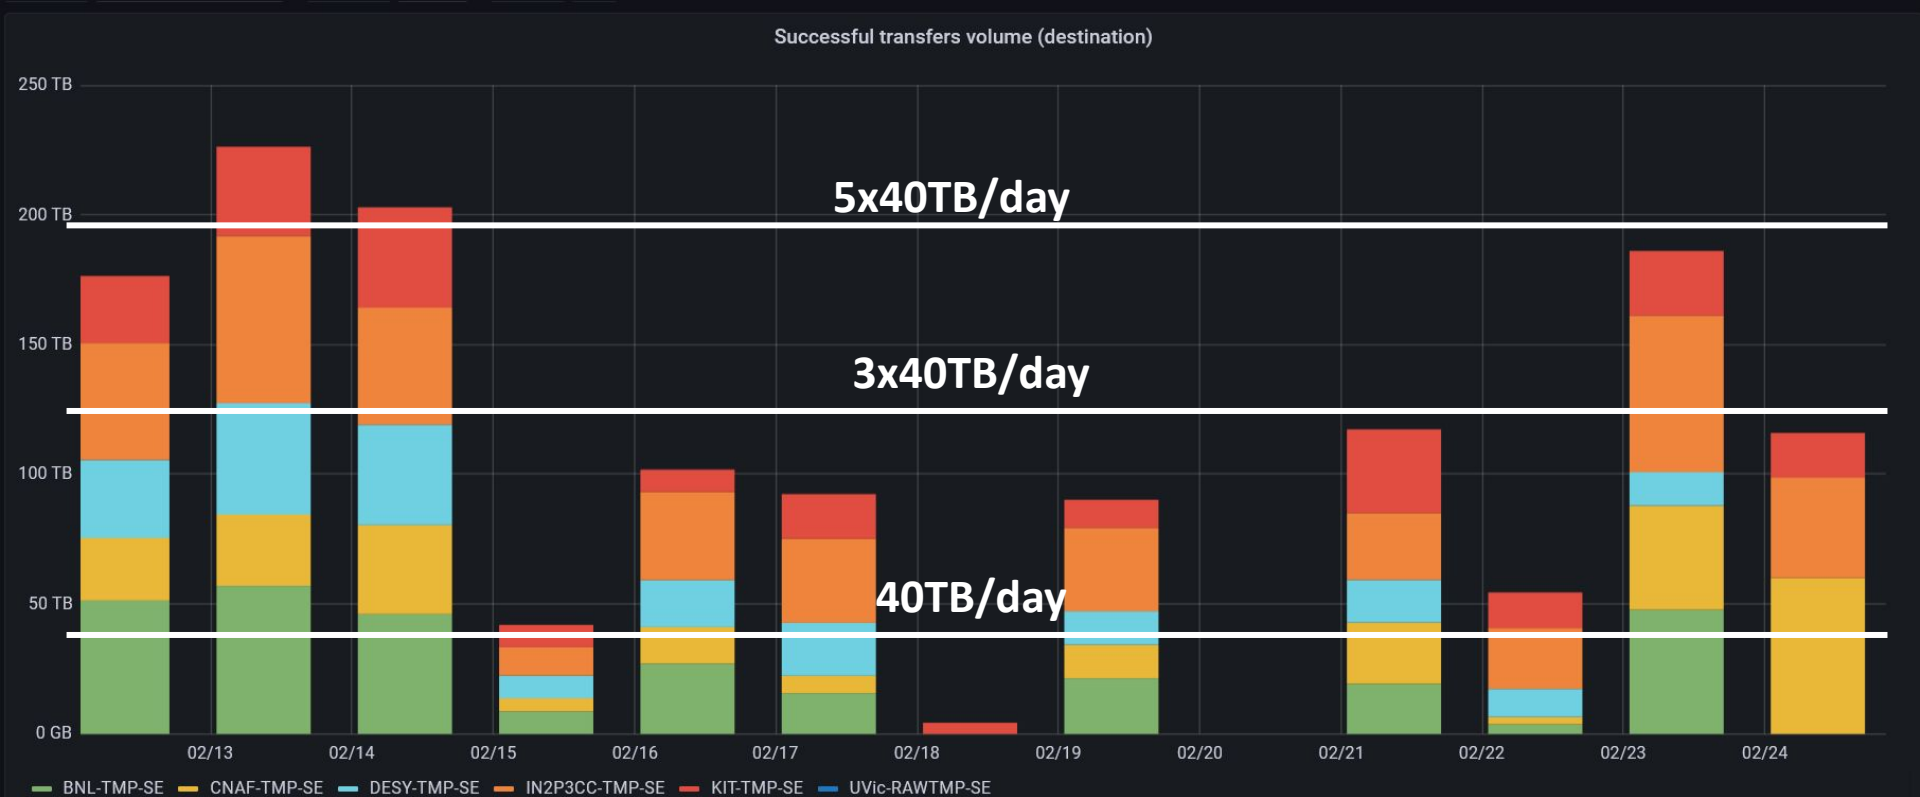

- Min - The target speed to achieve is $3 \times 3.7 \text{ Gbit/s} = \mathbf{11.1 \text{ Gbit/s}}$
- Max - The target speed to achieve is $5 \times 3.7 \text{ Gbit/s} = \mathbf{18.5 \text{ Gbit/s}}$

Activities

	DATE	Test	TOT	Peak (1h)	Average
1	12/02/2024 9:00 to 14/02/2004 23:00	KEK vs RAW DC (kek2-fts03 - v3.12.1)	606 TB/61h	50 Gbps	22,0 Gbps - Reached Max goal
2	15/02/2024 9:00 to 15/02/2024 16:00	KEK vs RAW DC (kek2-fts01 older)	39,9 TB/7h	25 Gbps	12,6 Gbps - Reached Min goal
3	16/02/2024 6:00 to 17/02/2024 19:00	KEK vs RAW DC (kek2-fts01)	194 TB/38h	24 Gbps	11,3 Gbps - Reached Min goal
4	19/02/2024 8:30 to 19/02/2024 21:30	KEK vs RAW DC + RAW DCs vs RAW DCs	80 TB/13h	27 Gbps	13,7 Gbps - Mixed traffic
5	21/02/2024 10:00 to 22/02/2024 9:00	RAW DCs vs RAW DCs (kek2-fts03)	141 TB/23h	46 Gbps	13,6 Gbps - Mixed traffic
6	23/02/2024 0:00 to 23/02/2024 14:00	KEK vs RAW DCs (kek2-fts03)	178 TB/15h	46 Gbps	26 Gbps - Reached Max goal

IPv6 in Belle II

A large part of Belle II traffic goes via IPv6, this because several large storages are configured in dual stack. In particular KEK and most part of RAW DCs are their storages configured in dual stack.

As regarding Computational Resources, according to the last survey conducted in April 2023, the percentage of Sites implementing IPv6 on Worker Nodes is 16%, but there are ongoing activities.

Currently, we are gathering information for the site report 2024, and by June we will have an updated status.

SITE REPORT 2023	
IPv6 deployment	#Sites
Storage Dual Stack	43% (was 34%)
WorkerNode Dual Stack	16% (was 13%)

IPv6 in Belle II

As for the Central Services of Belle II (DIRAC, Rucio, Condition DB, etc.), IPv6 is not configured for all of them, and compliance should be double-checked service by service.

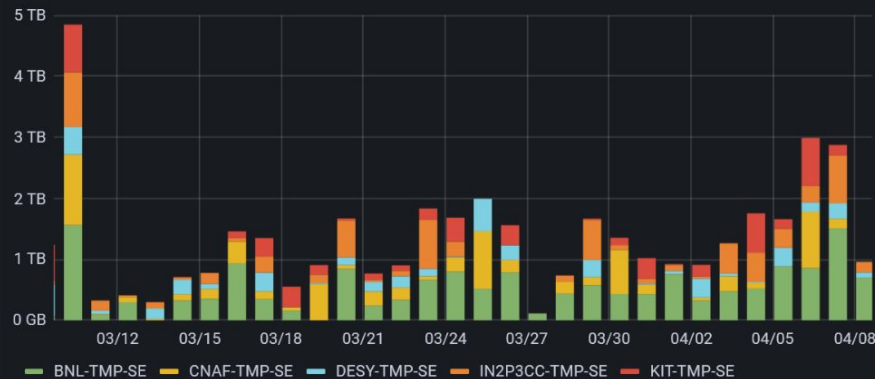

The activity requires a process to be started, and currently, we don't have a plan in place to implement an IPv6-Only infrastructure.

Conclusions

Belle II resumed data taking in early 2024.

The Data Challenge 2024 has been successfully completed, achieving the maximum target of 18.5Gbps outbound from KEK to RAW DCs.

Although IPv6 traffic is already significant, the entire computing infrastructure is currently not optimized for IPv6-only resources.

Data transfer activities are functioning correctly over the research network and are monitored via Rucio.
