

PIC's journey to CTA

Tuesday, 19 March 2024 09:30 (15 minutes)

Throughout 2023, we have continued conducting operational tests to familiarize ourselves with the functionality of CTA and understand the differences from Enstore. In addition to configuration tests of the application to observe how resource allocation works or to configure automatic tape provisioning, efforts have been made to deploy a centralized logging system to enhance the monitoring and operation of the application. Furthermore, preparations have begun for the migration tests from Enstore to CTA.

Primary authors: PLANAS, Elena (PIC); CARRASCO SANTOS, Elisabet (PIC-IFAE); ACCION GARCIA, Esther (The Barcelona Institute of Science and Technology (BIST) (ES)); CASALS HERNANDEZ, Jordi (Port d'Informació Científica); NOT SUPPLIED, Vanessa Acin (Institut de Física d'Altes Energies)

Presenter: CASALS HERNANDEZ, Jordi (Port d'Informació Científica)

Session Classification: CTA Operations and Site Reports

Track Classification: Site Reports
