

CTA Operator Tools News

Monday, 18 March 2024 11:45 (15 minutes)

At the 2nd CTA Workshop (2023), we announced a repository of Free and Open Source operator tools for CTA, including the Repack automation system (ATRESYS) tool. Since then, the repository has seen a number of new tool additions, as well as changes to the underlying libraries.

In this talk, we will introduce these new features, including tools for: automating the supply of tapes to tape pools; automated validation of data on tape; EOSCTA disk file metadata operations; and higher-level CTA operator tasks. Together, these make up the backbone of the tape operations ecosystem at CERN. We present these contributions in the hope that they will be as useful to the CTA community at large.
