

Understanding and debugging common CTA problems

Monday 18 March 2024 14:30 (1h 30m)

The goal of this hands-on session is to be able to debug common problems that could be faced by CTA administrators or operators. We will briefly give a broad overview of all the logging generated by the different CTA services, along with a peek into our monitoring dashboards. This gives a starting point to be able to understand and debug problems that may appear while operating CTA.

After that, a series of problems will be presented to be solved during the session.
