Searches for electroweak production of supersymmetric particles with the ATLAS detector

Monday 10 June 2024 15:05 (20 minutes)

The direct production of electroweak SUSY particles, including sleptons, charginos, and neutralinos, is a particularly interesting area with connections to dark matter and the naturalness of the Higgs mass. The small production cross-sections and challenging experimental signatures lead to difficult searches. This talk will highlight the most recent results of searches performed by the ATLAS experiment for supersymmetric particles produced via electroweak processes, including analyses targeting small mass splittings between SUSY particles. Recent results involving the combination of searches and in the context of the pMSSM are also presented.

Presenter: SALA, Alessandro (Università degli Studi e INFN Milano (IT))

Session Classification: SUSY, Phenomenology and Experiment

Track Classification: SUSY: phenomenology and experiment
