

CAS course on "Introduction to Accelerator Physics", 22 September - 05  
October 2024, Santa Susanna, Spain

Contribution ID: 174

Type: **not specified**

## Cyclotrons

*Monday 30 September 2024 08:30 (1 hour)*

Due to its simplicity the classical cyclotron has been used very early for applications in science, medicine and industry. Higher energies and intensities were achieved through the concepts of the sector focused isochronous cyclotron and the synchro-cyclotron. Besides those the fixed field alternating gradient accelerator (FFA) represents the most general concept among these types of fixed field accelerators, and the latter one is actively studied and developed for future applications.

**Presenter:** SEIDEL, Mike
