

## **Roundtable discussion: Next steps for international collaboration in the Big Science market**

*Tuesday 23 January 2024 10:15 (45 minutes)*

How does Big Science organisations (BSOs) work with companies and ILOs, respectively? What activities should be done only by BSO and which by ILOs?

From the company perspective, what are their needs and benefits from pan-European collaboration?

The BIGINN activities has demonstrated that coordinated business missions to BSOs with participants from more than one country benefits all. Is it possible to coordinate similar activities in the future? Who (BSOs, ILOs, business clusters) should join forces and be engaged for business missions, operating databases, maintaining competence matrixes, purchasing overviews, etc.?

What should be the next steps for stimulating a pan-European Big Science marketplace?
