

Experts required for commissioning of facilities

Piquets, that is, support in case of troubles, are excluded

Piotr Skowronski

Rationale

- OP management requested this exercise following frequent conflicts during past years
- The goal is to identify them early and try to rearrange the plannings to reduce chances of these situations
- Of course, we cannot eliminate entirely the risk
 - Technical problems: priority of problem solving in other facilities
 - Delays
- This kind of planning is always done by the equipment groups. The added value is a global view.

The data

- All the information was combined in one table attached as contribution in Indico agenda of today's meeting <https://indico.cern.ch/event/1370330/#11-equipment-expert-actions-du>
- It covers time from now until end of April
- 3 conflicting situations identified
 - According to the respective coordinators, they should be easy to resolve
