

Pixel detector developments for synchrotron radiation

Monday, 3 September 2012 16:50 (30 minutes)

Currently there are many interesting developments going on in the area of pixel detectors for synchrotrons and XFELs. Many developments done for XFELs also open new measurement capabilities at synchrotrons and overcome limitations of single photon counting detectors. In the presentation I will give an overview of the current developments with a focus on hybrid detector systems.
