Irvine, CA

Work with Robert Feger, Robert Saskowski and Elijah Sheridan

Use LieART to do systematically search of
String Inspired

nonSUSY Models with:

Small Product Gauge Groups
Three Families

Either Zero or a Few Extra Chiral Fermions

New Phenomenology

Class of bifundamental models inspired by orbifolding

$$AdS_5 \times S^5 \text{ with a discrete group } \Gamma$$

generates 4D theories with gauge groups

Kachru and Silverstein 1998

$$SU(n_1 N)^{q_1} \times SU(n_2 N)^{q_2} \times \dots \text{ where the } n_i \text{s are the dimensions}$$

of the irreducible representations (irreps) of Γ

Lawrence, Nekrasov and Vafa 1998

After spontaneous symmetry breaking (to diag subgroups) we can arrive at

bifundamental models with gauge groups of the form

$$SU(a) \times SU(b) \times SU(c)$$

Breaking a symmetry

$$SU(3)^n = SU(3)^p \times SU(3)^q \times SU(3)^r$$

to

$$SU(3)_1 \times SU(3)_2 \times SU(3)_3$$

the gauge coupling constants adjust to

$$g_1 = \frac{g}{\sqrt{p}}; \quad g_2 = \frac{g}{\sqrt{q}}; \quad g_3 = \frac{g}{\sqrt{r}}$$

A decorative graphic on the left side of the slide, consisting of a network of light blue lines and circles that resemble a circuit board or a neural network structure. The lines are of varying thickness and connect various circular nodes, some of which are also connected to other nodes, creating a complex, branching pattern.

Use LieART to search space of models

LIEART 1.0: A MATHEMATICA APPLICATION FOR
LIE ALGEBRAS AND REPRESENTATION THEORY
ROBERT FEGER AND TWK, **COMPUT. PHYS. COMMUN.**,
192, 166 (2015).

■ Classical and Exceptional Lie Groups

■ Properties of irreps

■ Irrep decompositions

■ Tensor products of irreps

■ Load `<<LieART`` package into Mathematica

■ LieART commands can be called from any Mathematica program.

- 
- 
- LieART 2.0 – Upgrade with many new features and tables.

- Code freely available at [HEPFORGE](https://hepforge.cern.ch)

We are interested in the nonSUSY ($\mathcal{N} = 0$) case.

Fermions are in quivers (bifundamentals).

E.g., for $SU(N)^3$

$$(N, \bar{N}, 1) + (1, N, \bar{N}) + (\bar{N}, 1, N)$$

Scalars are in adjoints, etc.

E. Sheridan and TWK, Nuclear Physics B**987**, 116108 (2023)

Well studied quiver models:

Pati-Salam Model 1974

$$SU(4) \times SU(2) \times SU(2)$$

Families in

$$(4, \bar{2}, 1) + (\bar{4}, 1, 2) + (1, 2, \bar{2})$$

Trinification Model de Rújula, Georgi and Glashow 1984

$$SU(3) \times SU(3) \times SU(3)$$

Families in

$$(3, \bar{3}, 1) + (1, 3, \bar{3}) + (\bar{3}, 1, 3)$$

Quiver models with 3 automatic families

334 Model

TWK, Shafi 2001; Lee, TWK, Shafi 2006

$$SU(4) \times SU(3) \times SU(3)$$

$$3(4, \bar{3}, 1) + 3(\bar{4}, 1, 3) + 4(1, 3, \bar{3})$$

Coefficients are required to cancel gauge anomalies

Contains 3 family PS model, three family trinification model
and several other possibilities

Grand Unification

$$E_6 \rightarrow SO(10) \rightarrow SU(5)$$

Fermion families in:

$$27 \rightarrow 16 + 10 + 1 \rightarrow (\bar{5} + 10 + 1) + (5 + \bar{5}) + 1$$

i.e., $(27 \rightarrow 16 \rightarrow (\bar{5} + 10 + 1)$ for the chiral part up to flipping)

Number of gauge generators

78, 45, 24

Three Family GUTs

SU(11)

Georgi

SU(9)

Frampton, Nandi

$$84 + 9(\bar{9})$$

Others

$SU(a) \times SU(b) \times SU(c)$ has $n = a^2 + b^2 + c^2 - 3$ gauge generators

Search for 3 family models with $n \leq 78$

If a , b and c are relatively prime

$$c(a, \bar{b}, 1) + b(\bar{a}, 1, c) + a(1, b, \bar{c})$$

If not remove greatest common divisor.

Building Models

Require no massless charged particle after SSB to the SM

three family models fall into subclasses:

“pristine models” only the three families are chiral at EW scale

“chiral extensions” three families plus extra chiral fermions—leptonic, hadronic or both at EW scale.

Recall:

A family \mathbf{F} of $SU(3)_C \times SU(2)_L \times U(1)_Y$ contains

$$\mathbf{F} = (\mathbf{3}, \mathbf{2})_{\frac{1}{6}} + (\bar{\mathbf{3}}, \mathbf{1})_{\frac{1}{3}} + (\bar{\mathbf{3}}, \mathbf{1})_{-\frac{2}{3}} + (\mathbf{1}, \mathbf{2})_{-\frac{1}{2}} + (\mathbf{1}, \mathbf{1})_1$$

plus a right-handed neutrino.

Spontaneous Symmetry Breaking

Sequential nonAbelian breaking (maximal and regular)

$$SU(N) \rightarrow SU(N - 1) \times U(1)$$

to get to

$$SU(3)_C \times SU(2)_L \times U(1)^m$$

then break Abelian symmetry group to get

$$SU(3)_C \times SU(2)_L \times U(1)_Y$$

Consider all possible embeddings of $SU(3)_C$ and $SU(2)_L$

and all possible $U(1)_Y$ charge assignments in

$$SU(a) \times SU(b) \times SU(c)$$

Do Systematic Search

Select family members

$$\begin{pmatrix} q_{\kappa 1} & q_{\kappa 2} & \dots & q_{\kappa m} \\ q_{\lambda 1} & q_{\lambda 2} & \dots & q_{\lambda m} \\ q_{\mu 1} & q_{\mu 2} & \dots & q_{\mu m} \\ q_{\nu 1} & q_{\nu 2} & \dots & q_{\nu m} \\ q_{\xi 1} & q_{\xi 2} & \dots & q_{\xi m} \\ q_{\rho 1} & q_{\rho 2} & \dots & q_{\rho m} \end{pmatrix} \begin{pmatrix} x_1 \\ x_2 \\ x_3 \\ x_4 \\ \vdots \\ x_m \end{pmatrix} = \begin{pmatrix} \frac{1}{6} \\ \frac{1}{3} \\ -\frac{2}{3} \\ -\frac{1}{2} \\ 1 \\ 0 \end{pmatrix}$$

Constrain models via SSB: only one unbroken $U(1)$ allowed

Restrict to models to where all charges are fixed

We handle this ambiguity by picking out the solution x with the smallest norm: that is, the element of the solution space whose Euclidean distance from the origin is least.

All charges are rational fractions

All potential models

No massless charged fermions

No conjugate SM fields

Possible Hypercharge assignments

Three families, plus extra chiral fermions

Three families, nothing extra

Gauge Group ($G \in \mathcal{G}'$)	$\dim G$	$N_P(G)$	NAB ($E \in \mathcal{E}$)	$N_{AB}(E)$	$N_{noMCF}(E)$	$N_{no\overline{SM}}$	$N_Y(E)$	$N_U(E)$	$N_{VL}(E)$

Vector-Like Extensions

Pheno starts at high scale

N33 Classes (N relatively prime to 3)

$$\mathbf{R}^{N33,i} = \mathbf{R}_{\text{SM}} + \mathbf{R}_{\text{universal}}^{N33,i} + \mathbf{R}_{\text{unique}}^{N33,i}$$

where $i = 1, 2, \dots, 5$

$$\begin{aligned} \mathbf{R}_{\text{universal}}^{N33,i} = & 3(\mathbf{3}, \mathbf{1})_{\frac{1}{6}} + 3(\bar{\mathbf{3}}, \mathbf{1})_{-\frac{1}{6}} \\ & + N(\mathbf{1}, \mathbf{2})_{\pm\frac{1}{2}} + (4N - 18)(\mathbf{1}, \mathbf{2})_0 \\ & + (4N - 15)(\mathbf{1}, \mathbf{1})_{\pm\frac{1}{2}} + (7N - 36)(\mathbf{1}, \mathbf{1})_0 \end{aligned}$$

and where $\mathbf{R}_{\text{unique}}^{N33,i}$ takes one of the 5 following forms

$$\mathbf{R}_{\text{unique}}^{N33,1}(N) = 6(\mathbf{1}, \mathbf{2})_0 + 6(\mathbf{1}, \mathbf{1})_{\pm\frac{1}{2}} + 12(\mathbf{1}, \mathbf{1})_0$$

$$\mathbf{R}_{\text{unique}}^{N33,2}(N) = 3(\mathbf{1}, \mathbf{2})_{\pm\frac{1}{2}} + 3(\mathbf{1}, \mathbf{1})_{\pm 1} + 6(\mathbf{1}, \mathbf{1})_{\pm\frac{1}{2}} + 6(\mathbf{1}, \mathbf{1})_0$$

$$\mathbf{R}_{\text{unique}}^{N33,3}(N) = 3(\mathbf{1}, \mathbf{2})_{\pm 1} + 3(\mathbf{1}, \mathbf{1})_{\pm\frac{3}{2}} + 6(\mathbf{1}, \mathbf{1})_{\pm 1} + 3(\mathbf{1}, \mathbf{1})_{\pm\frac{1}{2}}$$

$$\mathbf{R}_{\text{unique}}^{N33,4}(N) = 3(\mathbf{1}, \mathbf{2})_{\pm\frac{3}{2}} + 3(\mathbf{1}, \mathbf{1})_{\pm 2} + 6(\mathbf{1}, \mathbf{1})_{\pm\frac{3}{2}} + 3(\mathbf{1}, \mathbf{1})_{\pm 1} + 3(\mathbf{1}, \mathbf{1})_{\pm\frac{1}{2}}$$

$$\mathbf{R}_{\text{unique}}^{N33,5}(N) = 3(\mathbf{1}, \mathbf{2})_{\pm\frac{1}{10}} + 3(\mathbf{1}, \mathbf{1})_{\pm\frac{3}{5}} + 3(\mathbf{1}, \mathbf{1})_{\pm\frac{2}{5}} + 6(\mathbf{1}, \mathbf{1})_{\pm\frac{1}{10}}$$

When $SU(3)_C$ is in $SU(a)$

and $SU(2)_L$ is in $SU(b)$

we write the $U(1)$ charges as

$A_1, A_2, \dots, A_{a-3}; B_1, B_2, \dots, B_{b-2}; C_1, C_2, \dots, C_{c-1}.$

Hypercharge choice examples:

$$Y^{N33,1}(N) = \frac{1}{6}A_{N-3} + \frac{1}{4}C_1 + \frac{1}{4}C_2$$

$$Y^{N33,2}(N) = \frac{1}{10}A_{N-5} - \frac{1}{10}A_{N-4} + \frac{1}{6}A_{N-3} + \frac{1}{2}C_2$$

$$Y^{N33,3}(N) = \frac{1}{5}A_{N-5} - \frac{1}{5}A_{N-4} + \frac{1}{6}A_{N-3} + \frac{1}{2}C_2$$

$$Y^{N33,4}(N) = \frac{3}{10}A_{N-5} - \frac{3}{10}A_{N-4} + \frac{1}{6}A_{N-3} + \frac{1}{2}C_2$$

$$Y^{N33,5}(N) = \frac{1}{10}A_{N-5} + \frac{1}{15}A_{N-3} + \frac{1}{2}C_2$$

N63 Classes (N relatively prime to 3 and 6)

$$\mathbf{R}^{N63,i} = \mathbf{R}_{\text{SM}} + \mathbf{R}_{\text{universal}}^{N63,i} + \mathbf{R}_{\text{unique}}^{N63,i}$$

where $i = 1, 2$

$$\begin{aligned} \mathbf{R}_{\text{universal}}^{N63,i} = & 3(\mathbf{3}, \mathbf{1})_{\frac{2}{3}} + 3(\bar{\mathbf{3}}, \mathbf{1})_{-\frac{2}{3}} + 3(\mathbf{3}, \mathbf{1})_{-\frac{1}{3}} + 3(\bar{\mathbf{3}}, \mathbf{1})_{\frac{1}{3}} + 6(\mathbf{3}, \mathbf{1})_{\frac{1}{6}} + 6(\bar{\mathbf{3}}, \mathbf{1})_{-\frac{1}{6}} \\ & + N(\mathbf{1}, \mathbf{2})_{\pm\frac{1}{2}} + (4N - 18)(\mathbf{1}, \mathbf{2})_0 \\ & + (N + 3)(\mathbf{1}, \mathbf{1})_{\pm 1} + (12N - 48)(\mathbf{1}, \mathbf{1})_{\pm\frac{1}{2}} + (16N - 42)(\mathbf{1}, \mathbf{1})_0 \end{aligned}$$

and

$$\mathbf{R}_{\text{unique}}^{N63,1}(N) = 6(\mathbf{1}, \mathbf{2})_0 + 18(\mathbf{1}, \mathbf{1})_{\pm\frac{1}{2}}$$

$$\mathbf{R}_{\text{unique}}^{N63,2}(N) = 3(\mathbf{1}, \mathbf{2})_{\pm\frac{1}{10}} + 9(\mathbf{1}, \mathbf{1})_{\pm\frac{3}{5}} + 9(\mathbf{1}, \mathbf{1})_{\pm\frac{2}{5}} + 12(\mathbf{1}, \mathbf{1})_{\pm\frac{1}{10}}$$

Hypercharge choice examples:

$$Y^{N63,1}(N) = \frac{1}{6}A_{N-3} + \frac{1}{6}B_4 - \frac{1}{6}B_3 + \frac{1}{2}C_2$$

$$Y^{N63,2}(N) = \frac{1}{10}A_{N-5} + \frac{1}{15}A_{N-3} + \frac{1}{6}B_4 - \frac{1}{6}B_3 + \frac{1}{2}C_2$$

Chiral Extensions

New pheno near the EW scale

Minimal Chiral Extensions

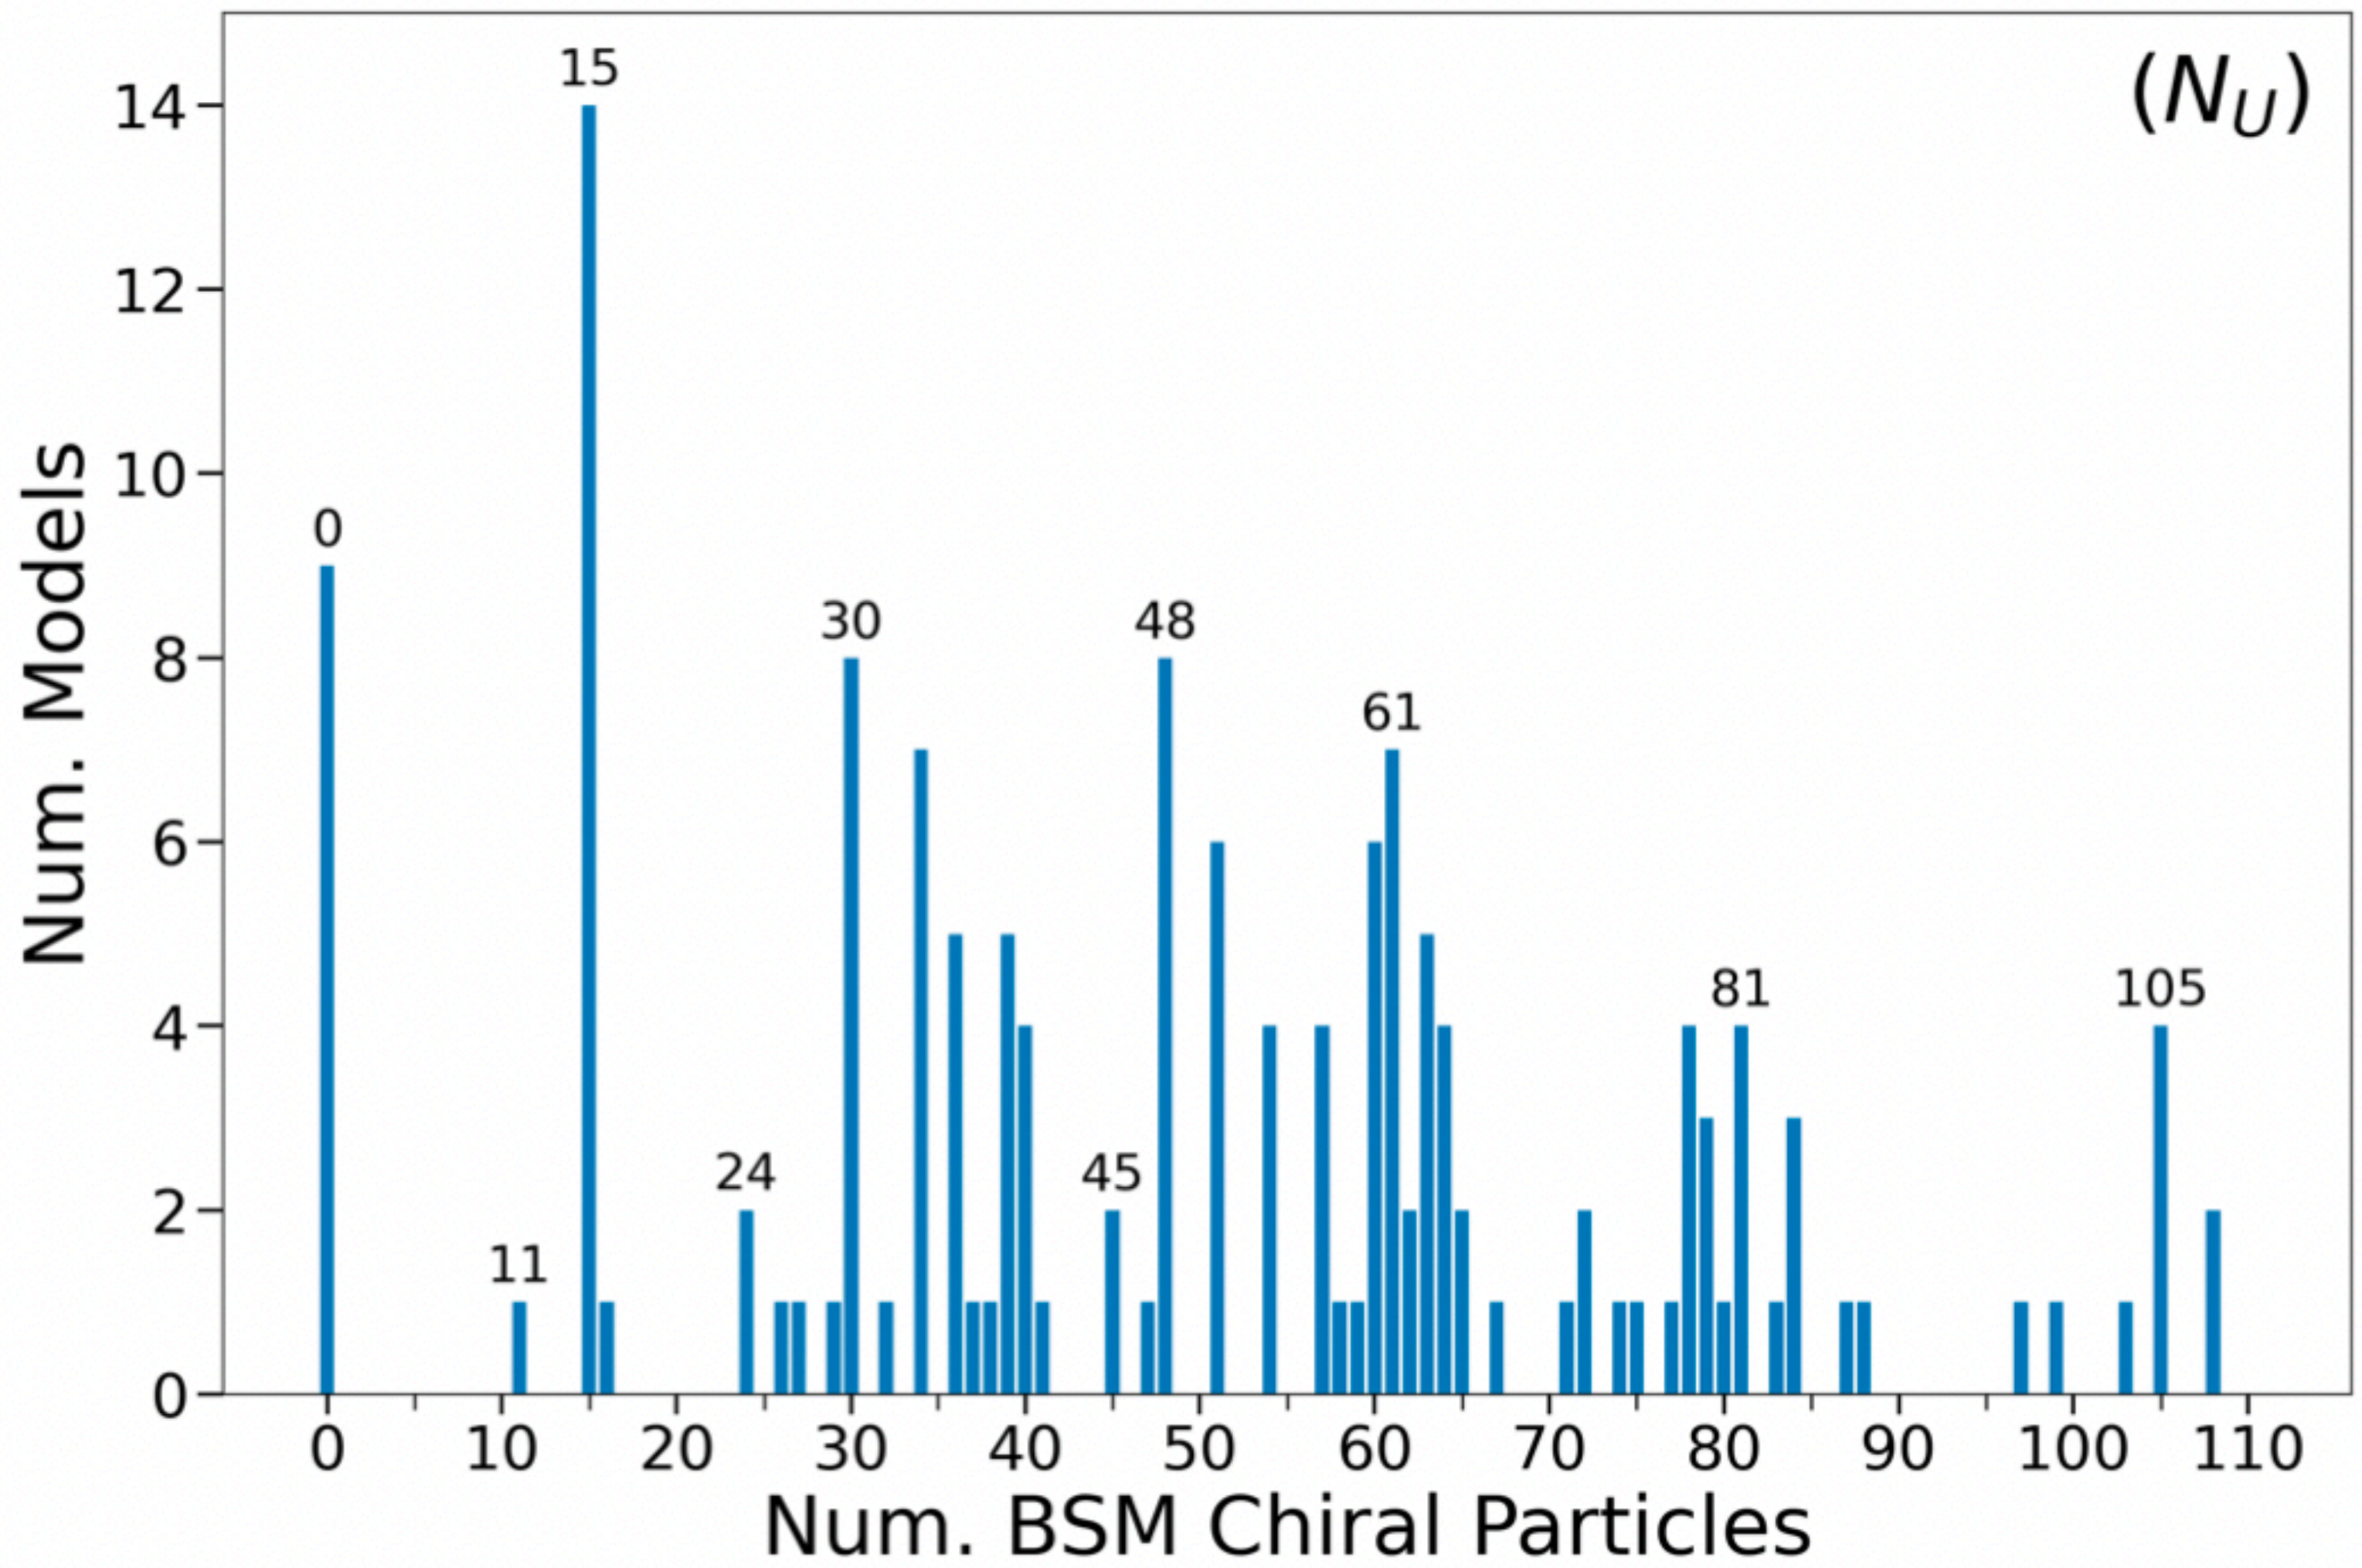

$$3(\mathbf{F} + \mathbf{1}) + \mathbf{R}_C$$

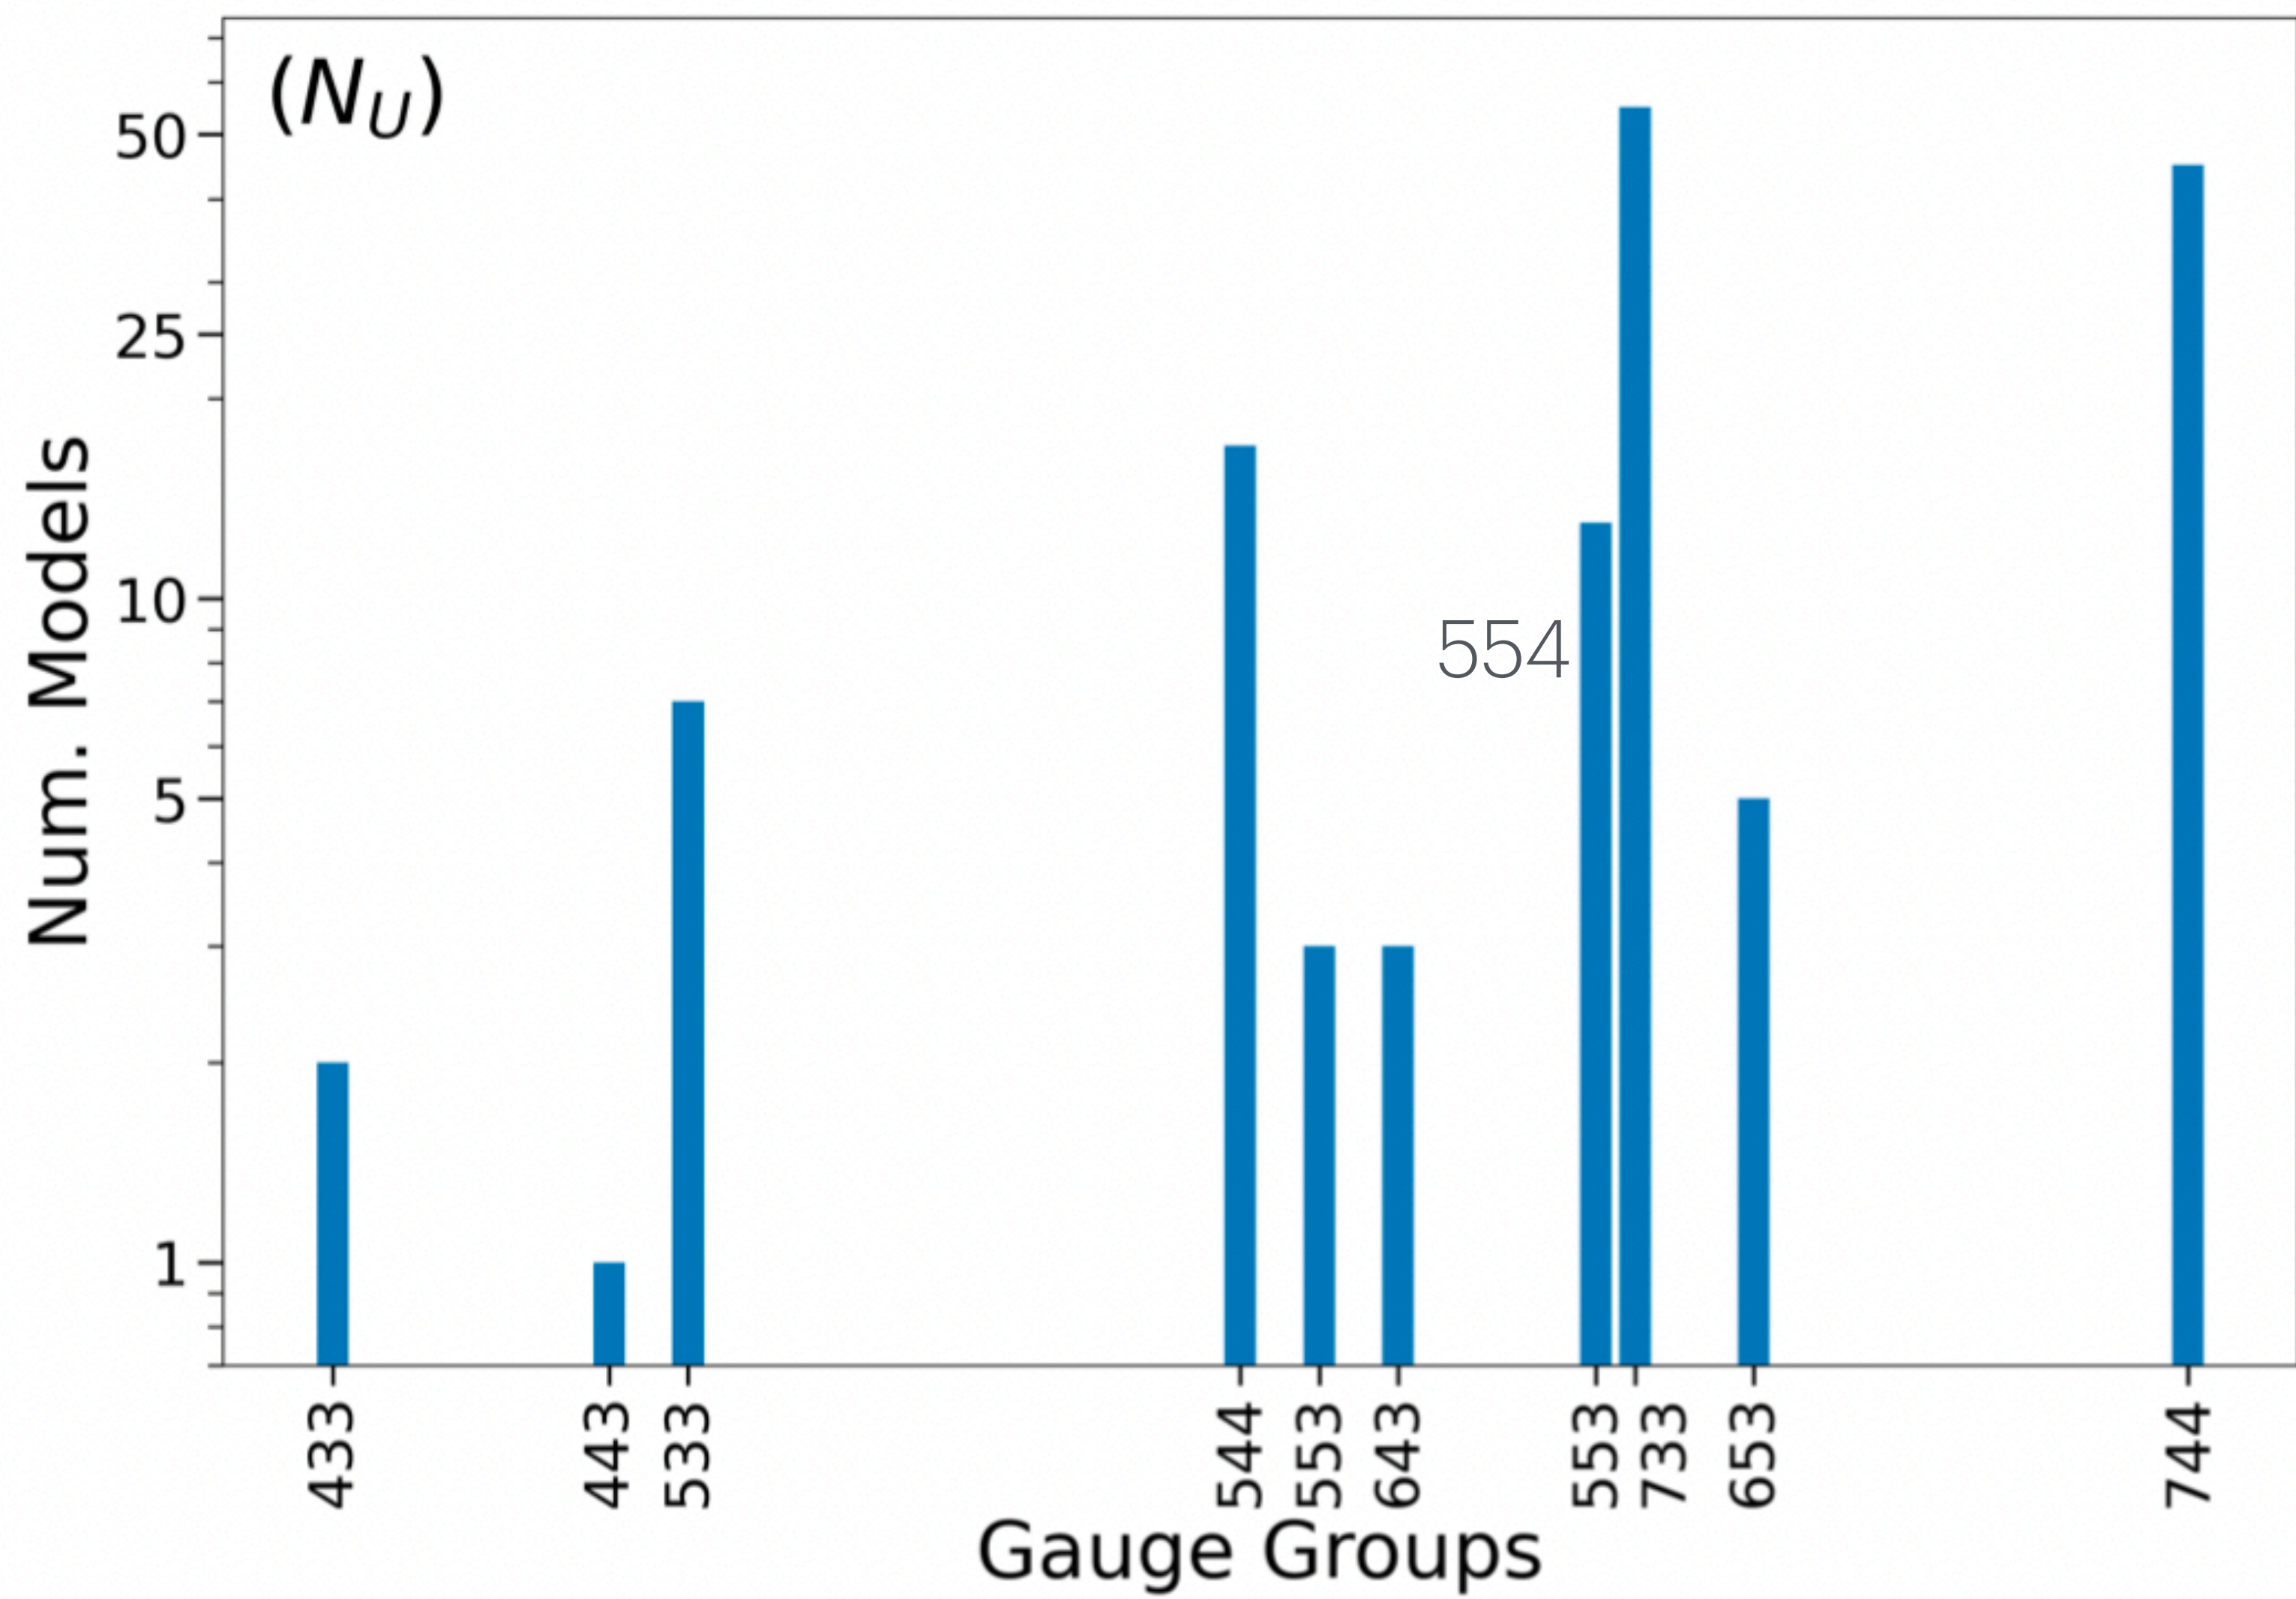

Smallest example, 11 extra leptons:

$$\mathbf{R}_C^{11} = (\mathbf{1}, \mathbf{2})_{\frac{3}{2}} + 3(\mathbf{1}, \mathbf{2})_{-\frac{1}{2}} + (\mathbf{1}, \mathbf{1})_{-2} + 2(\mathbf{1}, \mathbf{1})_1$$

where

$$Y^{11} = \frac{1}{4}A_3 + \frac{5}{12}A_4 + \frac{1}{2}B_1 + C_2.$$

FUTURE WORK: $SU(A) \times SU(B) \times SU(C)$ PHENO

Leptoquarks

Bileptons

Biquarks

Z's

Gearing up for pheno with G. Corcella, R. Feger, P. Frampton, etc.

FUTURE WORK: OTHER BIFUNDAMENTAL MODELS

Quantification

R Foot, H Lew and R Volkas (1990)

Flipped Quantification

J Dent, H Pas, TWK and T Weiler (2024)

Both based on $SU(3) \times SU(3) \times SU(3) \times SU(3)$

Explore $SU(a) \times SU(b) \times SU(c) \times SU(d)$ models

for models with up to 78 gauge generators

Extend to SUSY models

with $SU(a) \times SU(b) \times SU(c)$

and $SU(a) \times SU(b) \times SU(c) \times SU(d)$

E. Ma, et al.

Conclusions

Landscape of unexplored models with small gauge group

Can have new particles at or near the EW scale

Some with fractional charge

Hence multi-charged magnetic monopoles

Possible diquarks, dileptons, leptoquarks, Z's, ...

A decorative graphic on the left side of the slide, consisting of a network of light blue lines and circles that resemble a circuit board or a data network. The lines are vertical and horizontal, with some diagonal connections, and the circles are placed at various points along these lines, suggesting nodes or components in a system.

Thank you!!!

More on LieART

MAIN NEW FEATURES IN LIEART 2.0

- Even more user friendly
- Extended tables of properties of irreps, tensor products and branching rules
- Branching rules to special maximal subalgebras for all classical and exceptional Lie algebras through rank 15.

FEATURES IN COMPANION PAPER

- Download instructions
- Automatic Installation
- Manual Installation
- Documentation
- LaTeX package

QUICK START GUIDE

- Entering Irreps
- Decomposing Tensor Products
- Decomposition to Subalgebras
- Tables of all LieART Commands

Figure 1: Dynkin Diagrams of classical and exceptional simple Lie algebras.

Type	Cartan	Name	Rank	Description
classical	A_n	$SU(n+1)$	$n \geq 1$	Special unitary algebras of $n+1$ complex dimension
	B_n	$SO(2n+1)$	$n \geq 3$	Special orthogonal algebras of odd $(2n+1)$ real dimension
	C_n	$Sp(2n)$	$n \geq 2$	Symplectic algebras of even $(2n)$ complex dimension
	D_n	$SO(2n)$	$n \geq 4$	Special orthogonal algebras of even $(2n)$ real dimension
exceptional	E_6	E_6	6	Exceptional algebra of rank 6
	E_7	E_7	7	Exceptional algebra of rank 7
	E_8	E_8	8	Exceptional algebra of rank 8
	F_4	F_4	4	Exceptional algebra of rank 4
	G_2	G_2	2	Exceptional algebra of rank 2

$5824 = 26 + 52 + 273 + 324 + 1053 + 4096$
$7371 = 26 + 52 + 2(273) + 324 + 1053 + 1274 + 4096$
$7722 = 1 + 2(26) + 273 + 2(324) + 2652 + 4096$
$17550 = 273 + 324 + 2(1053) + 1053' + 1274 + 4096 + 8424$
$19305 = 26 + 52 + 273 + 324 + 1053 + 2652 + 4096 + 10829$

Tables from appendix are in supplementary material of paper.

BENCHMARKS

As an example for subalgebra decomposition of a large irrep we decompose the **6696000** of E_8 to $G_2 \otimes F_4$:

```
In[49] := Timing[DecomposeIrrep[Irrep[E8][6696000], ProductAlgebra[G2, F4]]]
```

```
Out[48] := {1066.14, 2(7, 1) + 2(14, 1) + (1, 26) + (27, 1) + 6(7, 26) + 5(14, 26) + 2(1, 52) + 6(27, 26) + 3(7, 52) +  
2(64, 1) + 3(14, 52) + 2(77, 1) + 5(27, 52) + 5(64, 26) + 4(77, 26) + (77', 26) + 3(64, 52) + 2(77, 52) +  
(77', 52) + (189, 1) + (182, 26) + 2(189, 26) + (182, 52) + (189, 52) + 3(1, 273) + 6(7, 273) + 4(14, 273) +  
8(27, 273) + (1, 324) + 6(7, 324) + 5(64, 273) + 5(14, 324) + 3(77, 273) + (77', 273) + 4(27, 324) +  
3(64, 324) + 3(77, 324) + (182, 273) + (189, 273) + (189, 324) + 2(1, 1053) + 5(7, 1053) + (7, 1053') +

```

FUN WITH LIEART

- SU(2) irreps have dimensions: 1, 2, 3, 4, 5, ...
- Others look more random. E.g., SU(3) irreps are of dim: 1, 3, 3bar, 6, 6bar, 8, 10, 10bar, 15, 15bar, 15', 15'bar, 21, 21bar, 24, 27, ...

- There is a sequence of SU(3) irreps
(0,0), (1,1), (2,2), (3,3), ...

with dim

$$1, 8, 27, 64, \dots = 1^3, 2^3, 3^3, 4^3, 5^3, \dots$$

- Similar result hold for any classical or exceptional group where $[a,a,a,a,\dots,a]$ has $\dim (a+1)^p$
- All have series of irreps $1^p, 2^p, 3^p, 4^p, \dots$ where for A_n , $p = 1, 3, 6, 10, \dots$ (binomial coeff) for $n = 1, 2, 3, 4, \dots$ for B_n and C_n $p = n^2$, for D_n , $p = 2 \times$ the binomial coeff of A_n and for the exceptionals $p = 6, 24, 36, 63$ and 120 for G_2, F_4, E_6, E_7 and E_8 .

- E.g., $\text{Irrep}[E_8][9,9,9,9,9,9,9,9] = 10^{120}$

which is an exact result.

ONE-LINE PROOF FROM WEYL DIM FORMULA

First we rewrite the Weyl's dimension formula for a general irrep Λ in the form

$$\dim(\Lambda) = \frac{\prod_{\alpha \in \Delta^+} (\Lambda + \delta, \alpha)}{\prod_{\alpha \in \Delta^+} (\delta, \alpha)} \quad (16)$$

where Δ^+ is the set of positive roots α . Recall that in the Dynkin bases one has $\delta = (1, 1, 1, \dots, 1)$. Now for the specific irrep $\Lambda = (a, a, a, \dots, a) = a\delta$ that means we have

$$\dim(\Lambda) = \frac{\prod_{\alpha \in \Delta^+} (a + 1)(\delta, \alpha)}{\prod_{\alpha \in \Delta^+} (\delta, \alpha)} = \frac{\prod_{\alpha \in \Delta^+} (a + 1)}{\prod_{\alpha \in \Delta^+} (1)} = (a + 1)^p \quad (17)$$

where p is the number of positive roots, i.e., the number of elements in the set Δ^+ , which agrees with the numbers in the examples above.

END

ENTERING IRREPS

- Entering the 10 of SU(5) by its Dynkin label and algebra class:

```
In[2]:= Irrep[A][0,1,0,0]//FullForm
```

```
Out[2]:= Irrep[A][0,1,0,0]
```

- `In[3]:= Irrep[A][0,1,0,0]//StandardForm`
- `Out[3]:= (0100)`
- TraditionalForm (default):
- `In[4]:= Irrep[A][0,1,0,0]`
- `Out[4]:= 10`

ENTERING IRREPS

- Entering the 10 of $SU(5)$ by its dimensional name specifying the algebra by its Dynkin classification in A_4 :
- `In[6]:= Irrep[A4][10]//InputForm`
- `Out[6]:= Irrep[A][0,1,0,0]`
- The traditional name of the algebra $SU(5)$ may also be used:
`In[7]:= Irrep[SU5][10]//InputForm`
- `Out[7]:= Irrep[A][0,1,0,0]`

DECOMPOSING TENSOR PRODUCTS

- `In[14]:=DecomposeProduct[Irrep[E6][27],Irrep[E6][Bar[27]]]`

- `Out[14]:= 1+78+650`

- Decompose the tensor product $3 \otimes 3 \otimes 3$ of $SU(3)$:

- `In[15]:= DecomposeProduct[Irrep[SU3][3],Irrep[SU3][3],Irrep[SU3][3]]`

- `Out[15]:= 1+2(8)+10`

DECOMPOSITION TO SUBALGEBRAS (VIA PROJECTION MATRICES)

- Decompose the 16 of $SO(10)$ to $SU(5) \otimes U(1)$:
- `In[26]:= DecomposeIrrep[Irrep[SO10][16],ProductAlgebra[SU5,U1]]`
- `Out[26]:= (1)(-5)+(5bar)(3)+(10)(-1)`

- E.g., E_7 has two $SU(2)$ special maximal subalgebras
- `In[34]:= DecomposeIrrep[Irrep[E7][56], SU2, 1]`
- `Out[34]:= 10+18+28`
- `In[35]:= DecomposeIrrep[Irrep[E7][56], SU2, 2]`
- `Out[35]:= 6+12+16+22`
