

# Tools and Techniques L1: Introduction

*Monday 9 September 2024 12:30 (1 hour)*

First, we discuss some of the characteristics of software projects for high energy physics, and some of the issues that arise when people want to contribute to them. We then continue with a brief introduction to software engineering from the perspective of the individual contributor, both as a formal process and how it actually affects what you do. We discuss the examples of unit testing and memory access problems.

## **Summary**

**Presenter:** Prof. JACOBSEN, Bob
