OSG Site Validations for WLCG reporting.

Ruth Pordes

OSG

Scope/Goals

- Decision to develop OSG infrastructure for site validation tests reporting
  - locally to Site Administrators,
  - central OSG repository,
  - filtered movement of data as needed to WLCG SAM
- Commitment to common record structure with WLCG joint monitoring group.
  - Discussions of / changes in structure either til very recently or still going on.

Status

- 1st round of OSG probes in VDT.

- Scheduling structure with condor in place

- Collection in "gratia" repository done

- Transfer of information to SAM ready -- waiting for joint effort to make this happen and to validate.

- Will be deployed in OSG over next few months.

  - September a goal as first official reporting month? What does it take for this?

Once data is in SAM

- Still lots of effort needed to check information and compare to existing SAM informatin.

- How does this information feed into the high level availability summaries that the WLCG reports to the oversight bodies.

- Need to start this soon since will take some discussion and understanding cf. what happened with accounting.

- This is related to **policy at the MB level.** OSG executive team is ready to start talking about this.
