Zurich**^{UZH}

Outline

- 1 Motivation
- 2 $B \rightarrow K^* \mu^+ \mu^-$
- 3 Neural network
- 4 Summary

In collaboration with Jernej Kamenik and Sandro Mächler

Outline

1 Motivation

2 $B \rightarrow K^* \mu^+ \mu^-$

3 Neural network

4 Summary

Motivation

Angular observables in $B \rightarrow K^* \mu^+ \mu^-$

Tension: $\sim 2\sigma$

Long distance (LD) effects

Hard to compute

Solution

Neural Network

Outline

1 Motivation

2 $B \rightarrow K^* \mu^+ \mu^-$

3 Neural network

4 Summary

Effective Hamiltonian

$$\mathcal{H}_{\text{eff}} = \frac{4G_F}{\sqrt{2}} V_{tb} V_{ts}^* \sum_i C_i O_i,$$

$$O_9 = \frac{e^2}{16\pi^2} (\bar{s} \gamma_\nu P_L b) (\bar{\mu} \gamma^\nu \mu), \quad O_{10} = \frac{e^2}{16\pi^2} (\bar{s} \gamma_\nu P_L b) (\bar{\mu} \gamma^\nu \gamma_5 \mu).$$

$$\bar{B}^0 \rightarrow \bar{K}^{*0}(\rightarrow K^- \pi^+) \mu^+ \mu^-$$

Differential decay rate

$$\frac{d^4\Gamma}{dq^2 d \cos \theta_l d \cos \theta_{K^*} d\phi} = \sum_i a_i J_i$$

Angular coefficients

$$J_i = J_i(C_i, FFs, LD, \dots)$$

Issue

Dependence on LD effects

Optimized observables

Descotes-Genon/Hurth/Matias/Virto: 1303.5794

P_i

Linear combinations of J_i

Example

$$P_{5'} = (J_5 + \bar{J}_5)/2\mathcal{N}'$$

Advantage

small dependence on FFs

Goal

Find optimized observables

Small dependence on LD effects

Form

Lin. comb. of J 's

Parameter inference

Find C_9, C_{10}

Neural network: Classifier

Input

q^2 -bin, FFs, J_i

Output

$C_9 - C_{10}$ class

Class

range for C_9 and C_{10}

Neural Network

Outline

1 Motivation

2 $B \rightarrow K^* \mu^+ \mu^-$

3 Neural network

4 Summary

Procedure

Create training data

Vary J_j via parameters

Training

Labelled data

Comparison

with global fit

Tools

flavio

Comparison of performance

Training data

WCs

$$C_9^{NP} \in [-C_9^{SM}, C_9^{SM}], \quad C_{10}^{NP} \in [-C_{10}^{SM}, C_{10}^{SM}]$$

FFs

Bharucha/Straub/Zwicky: 1503.05534

SSE parameters

LD

$$C_9 \rightarrow C_9 + \Delta C_9^{LD}$$

LD

Helicity dependence

$$(\Delta C_9^{LD})_\lambda = a_\lambda + b_\lambda q^2 + i(c_\lambda + d_\lambda q^2)$$

$$\lambda = 0, +, -$$

LD: here

charm loop contributions
