After 25 years - Important takeaway messages

- Importance of careful understanding and confrontation of experimental data from different experiments
 - Different kinematic domains and phase-space limitations
 - Experiments employ complex analysis techniques, Monte-Carlo simulations, and sophisticated corrections (e.g. acceptance, VMs, radiative corrections)
- Close collaboration between different experiments → general benefit for the field
 - Knowledge transfer, comparison of the analysis techniques, tools, and methodology, cross-analyses between different experiments
- Close collaboration between experiment and phenomenology/theory
 - Flexibility in adapting on the analysis side to the choice of the observables, phase-space selections, etc. (before publishing the data)
 - Different possibilities for common paper projects, external membership
- Possibility to organize effective and fruitful collaborative work
